The goal of the Summit is to discover the insights, ideas and collaborations waiting for us around the corner when we allow our work to live in expansive territories. The intention is to examine what emerges as we turn and twist the act of knowing so that it sheds light on a new, relevant, immediate and responsive way to meet critical needs in humanity, education, arts, research and healthcare today.

We will also examine how experience and language interface by using interactive tag clouds, designed specifically for The Summit.
