Hello! My name is Jill Furgurson and I am the Director of College Programs at Broadreach. Our programs offer hands-on, experiential education designed to get you out of the classroom and immersed in your field of study. Choose from a variety of courses in medicine, animal science, ecology and marine biology, and prepare to work alongside scientists in the field, earning professional certifications and college credit along the way.

A sampling of our biology programs includes:

- Caribbean Tropical Marine Biology
- Ecuador Tropical Biology
- Costa Rica & Nicaragua Sea Turtle Ecology
- India Global Medicine
- Costa Rica Veterinary Medicine
- South Africa Ultimate Predators

Each Broadreach program is a unique study abroad experience that will give you both a competitive edge for graduate school as well as an in-depth look at the field of marine science. We take only 10 - 12 students on each program and spaces are filling quickly for our Summer 2016 sessions. If you decide one of our programs are a good fit for you, I encourage you to apply soon to take advantage of this opportunity to gain new skills, earn academic credit and explore your interests on a global scale.

The trip gives you an unparalleled look at many types of tropical species. From the cloud forest to the amazon to the Galapagos, every aspect of our adventure was full of amazing life. The people, the palce, and our collective experience was one of the most memorable and wonderful times of my life. – Rowan, Ecuador Tropical Biology
