Whether the goal is to improve vital communication, negotiation, and implement change. Participants will learn how to communicate more effectively, better use their team, and report progress. Project managers will also be coached on negotiation and risk assessment as well as learn how to track and control a project. This course emphasizes on bridging the communication gap between Business and Technology. The main culprit behind faulty business requirements, which, in turn, are the main culprits for project failure. Participants learn the toolkit for communicating with the business stakeholders and the development team, eliciting requirements and specifications, analyzing data, and packaging and presenting it properly, as well as compiling and executing effective testing techniques. Courses can be taken individually or combined to earn the Business Analysis Certificate.

Who Should Attend

Business Analysis Courses
