ISO 50001: 2011
Energy Management System

Why Should You Attend?  In today’s business environment, every organization is looking to reduce energy costs and enhance efficiency. Energy Management Standard (EnMS) ISO 50001 has framed the strategy. Professional ISO 50001 training puts game-changing plans into practice.

How Will You Learn?  AETI offers dynamic ISO 50001 training courses that stand out for their quality, instructors, and learning options. Our course options range from introductory to in-depth and are available on-site at AETI state of the art training facility or at your workplace. Course instructors are industry experts who provide students with the knowledge and tools to implement cost-saving strategies immediately.

ISO 50001 Training Courses:
Introduction to ISO 50001:  In this two-day live training session, participants explore the standard and its requirements, review concepts of energy uses and sources, and consider how ISO 50001 fits with the Plan-Do-Check-Act model.

Implementing ISO 50001:  This three-day, instructor facilitated “how-to” course centers on implementing an EnMS consistent with the ISO 50001:2011 standard. The workshop offers 2.4 Continuing Education Units (CEU’s) and guides participants through hands-on sessions that apply aspects of the standard to their own facility. They will also take home tools, forms and worksheets to fast track their ability to execute an EnMS successfully.

The benefits of implementing ISO 50001 are clear:
- Reduced energy costs
- Reduced greenhouse gas emissions
- Reduction of other environmental impacts
- More efficient use of energy sources.

To help Long Island companies in the pursuit of the ISO50001 standard, the Advanced Energy Training Institute (AETI) is proud to announce our partnership with one of the top certification bodies in the world. UL DQS Inc. is a premier international management certification body offering energy management and certification.
