The Clean Energy Entrepreneurship Development Program provides information on clean energy technologies and the associated markets; and details running a start-up technology business, addressing topics such: as funding opportunities, economic development, certifications, training and patents. Upon program completion, participants may have access to existing clean energy technologies developed and licensed at Stony Brook University and Brookhaven National Labs. Graduates of the program will be invited to partner with University and Lab technologists with the goal of taking these highly innovative and cutting edge clean energy technologies from the test bench to a commercialized, marketable product.

Program Dates
September 6, 2012 through October 31, 2012. Seven weekly classroom sessions at Stony Brook University, one field trip session touring several Long Island clean energy projects. The final two sessions will be held at the Advanced Energy Conference 2012, Jacobs Javits Center, October 30 & 31, 2012. Please visit www.cebip.org for complete program details.

Program At A Glance

Program Application
We are looking for experienced and business savvy professionals who are interested in the future of clean energy and developing their own clean energy start-up company. This comprehensive program is only $300, but space is limited. Registration will be a highly selective process, with only 20 entrepreneurs being invited to participate. Participants must agree to attend all sessions.

Applications are due no later than July 15, 2012. The selection committee will review all applications and the accepted individuals will be notified by the beginning of August. Visit www.cebip.org to apply.
