Dr. Elizabeth Losos
President, Organization for Tropical Studies

Opportunities in Tropical Biology, Environmental Science, and Global Health

Dr. Losos will discuss numerous opportunities for undergraduate and graduate students to learn science and do research in tropical ecosystems. OTS offers summer and semester programs in Hawaii, Costa Rica, and South Africa that provide a comprehensive introduction to field biology, conservation policy, and global health. Summer internship programs provide qualified students with intensive research experiences. Graduate courses provide a platform for conducting dissertation research at tropical field stations.
