Narratives of Environmental Danger and Disaster

Narratives about the environment today are often frightening but impersonal stories of extinction, ecosystem collapse, climate change, nuclear meltdown, and rampant pollution. This roundtable discussion focuses on how people who experience environmental danger and disaster firsthand interpret and remember what happened to them.

Kate Brown is a professor of history at the University of Maryland, Baltimore County, and author of *Plutopia: Nuclear Families, Atomic Cities, and the Great Soviet and American Plutonium Disasters*.

Heidi Hutner is director of the Sustainability Studies Program at Stony Brook. She is the author of *Colonial Women*, and has two books in progress: *The Ecology of Education* and *Nowhere: An Atomic Memoir*.

Christopher Sellers is a professor of history at Stony Brook University. He is the author of *The Crabgrass Crucible: Suburban Nature and the Rise of Environmentalism in Twentieth-Century America*.

Marianne Sullivan is an assistant professor of public health at William Paterson University in New Jersey. She is the author of *Tainted Earth: Smelters, Public Health, and the Environment*.
