

## Work-At-Home Service (WAH) for MAC (formerly VPN)

To access campus resources - such as department shared folders, home directory folders, PeopleSoft Administrative system, privileged SOLAR access, etc.- from off campus using DSL or cable you must use the SBU Work-At-Home Service. Users who dial into the University do not need this.

You must have a **Net ID** (your domain sign on is your NetID) to access the Work-At-Home Service. [What's Net ID? Click here to find out.](#)

### **How to connect to Work-At-Home Service**

Open your web browser (Safari or Camino, Firefox does not work) and enter the following URL in the address bar:

**sslj.wah.stonybrook.edu**

The screenshot shows the Juniper Networks logo at the top left. Below it, the text reads "Welcome to the Secure Access SSL VPN". There are two input fields: "Username" and "Password". To the right of the "Password" field, it says "Please sign in to begin your secure session." Below the input fields is a "Sign In" button.

Enter your **NetID** and  
**NetID password**

Click **Sign In**

The first time you connect you will have to install the Juniper software. You must click '**Yes**' here.

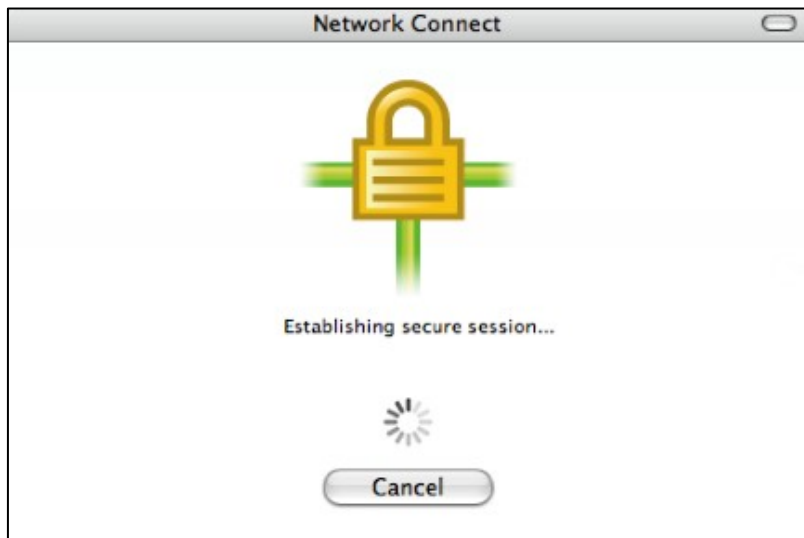

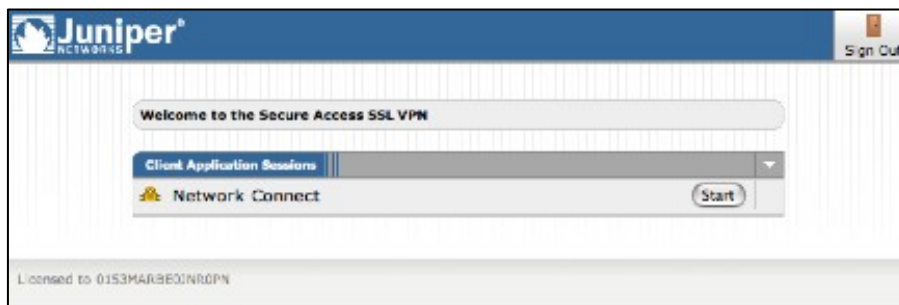

You might be prompted for your administrative password to install this software. This should be your username and password for your computer logon, not your NetID and NetID password.

Wait for the next dialog box....

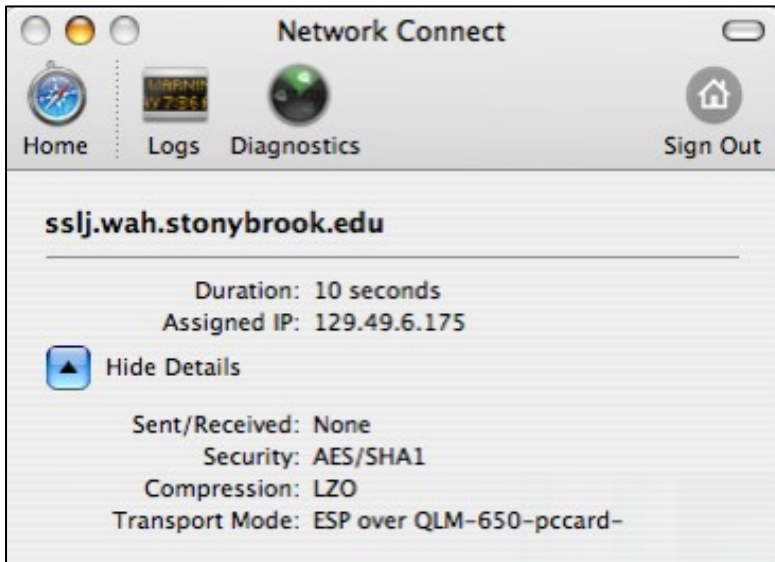

You may see:

When you see the following screen you are connected to the Work-at-Home Service.

You should also see the following screen. It might be hidden behind the screen from the web browser.

Make sure that you save your work often. If you are idle for 10 minutes your Work-at-Home Service connection will be terminated.

### **How to disconnect from the VPN:**

You can sign out using either the 'Sign Out' button on the *Network Connect* screen or in the top right corner on your web browser.

### **Error Message using Firefox:**
