Department of Materials Science and Engineering, College of Engineering and Applied Sciences

CHAIRPERSON: Michael Dudley  UNDERGRADUATE PROGRAM DIRECTOR: Gary P. Halada  ADMINISTRATIVE ASSISTANT: Lynn Allopenna

E-MAIL: Lynn.Allopenna@stonybrook.edu  WEB ADDRESS: http://www.matscieng.sunysb.edu

Minors of particular interest to students majoring in Engineering Science: Biomaterials (BES), Electronic, Optical, and Magnetic Materials (EOM), Manufacturing Engineering (MFE), Materials Science (ESM), Physical Metallurgy (PME), Environmental Engineering

Faculty

Clive R. Clayton, Leading Professor, Ph.D., University of Surrey: Structure and properties of materials; thin film processing.

Michael Dudley, Professor, Ph.D., University of Warwick: Synchrotron X-ray topography; defects in single crystals.

Charles Fortman, Associate Professor, Ph.D., Stanford University: Solid State Physics, Protein Dynamics.

Richard J. Gambino, Professor and Principal Research Scientist, M.S., Polytechnic Institute of New York: Magnetic thin films; magneto-optical properties.

Dilip Gersappe, Associate Professor, Ph.D., Northwestern University: Polymer science; computational methods in materials science.

Andrew Gouldstone, Assistant Professor, Ph.D., Massachusetts Institute of Technology: Properties of nanoscale coatings; thermal spray.

Pelagia Irene Gouma, Associate Professor, Ph.D., University of Birmingham: Microstructural characterization of advanced materials; electron microscopy; microanalysis.

Gary P. Halada, Associate Professor, Ph.D., Stony Brook University: Surface analysis; synchrotron X-ray and infrared spectroscopies; environmental nanotechnology; molecular spectroscopy.

Herbert Herman, Professor Emeritus, Ph.D., Northwestern University: Materials engineering; surface engineering; physical metallurgy.

Franco P. Jona, Professor Emeritus, Ph.D., Eidgenossische Technische Hochschule: Solid-state physics; modern materials.

Tadanori Koga, Assistant Professor, Ph.D., Kyushu University: Synchrotron X-ray and neutron scattering; green polymer processing; control of methane hydrate formation.

Devinder Mahajan, Research Professor, Ph.D., University of British Columbia: Molecular and nano metal synthesis; liquid-phase catalysis.

Nadine Pernodet, Assistant Professor, Ph.D., Institut Charles Sadron: Polymers; tissue engineering.

Miriam Rafailovich, Distinguished Professor, Ph.D., Stony Brook University: Polymer surfaces and interfaces.

Sanjay Sampath, Professor, Ph.D., Stony Brook University: Thermal spray technology; tribology; functionally graded materials.

Leslie L. Seigle, Professor Emeritus, D.Sc., Massachusetts Institute of Technology: Thermodynamics.

Jonathan C. Sokolov, Professor, Ph.D., Stony Brook University: Polymer surfaces and interfaces.

Albert Tobin, Part-time Professor, Ph.D., Columbia University: Composites and ceramics.

David Welch, Part-time Professor, Ph.D., University of Pennsylvania: Kinetics of diffusion; energetics; crystal lattice defects; radiation effects.

T.A. Venkatesh, Assistant Professor, Ph.D., Massachusetts Institute of Technology: Nanomaterials, Smart Materials, Materials for MEMS and biomedical applications.

Affiliated Faculty

Benjamin Chu, Chemistry

Adjunct Faculty

Estimated number: 20

Teaching Assistants

Estimated number: 20

The Department of Materials Science and Engineering offers the Bachelor of Engineering degree program in Engineering Science and several interdisciplinary undergraduate programs in conjunction with other science and engineering departments on campus. The joint programs provide basic training for graduates to enter a wide range of industries or to proceed to graduate studies in engineering fields. They are aimed at the materials aspects of mechanical engineering, electrical engineering, physics, and chemistry. Engineering Science students can choose to specialize in biomedical engineering, mechanical and manufacturing engineering, electrical engineering, materials science and engineering, civil and environmental engineering, nanoscience engineering, and engineering management. Reflecting the breadth and variety of topics falling within the domain of engineering science, the Department also offers six minors that afford undergraduate students the opportunity to enhance their engineering or science studies with knowledge in a specific area. In addition to the minor in Materials Science, the Department offers minors in Biomaterials; Electronic, Optical, and Magnetic Materials; Manufacturing Engineering; Environmental Engineering; and Physical Metallurgy. Each is detailed under a separate heading in the alphabetical listings of Approved Majors, Minors, and Programs.

The program mission is aimed toward providing an engineering education which thoroughly covers fundamental aspects of engineering design, physical and chemical sciences, mathematics, and materials science and engineering, while also providing flexibility so that students can create a program tailored to their particular academic and career interests in a traditional or emerging discipline. The program is designed to provide core competency and skills in communication, design, and research while preparing students to participate in a rapidly evolving high-technology environment.

Program Educational Objectives

Alumni of the ESG program should be engaged in the following activities:

1. Conducting successful careers in engineering or science-related disciplines, by recognizing and responding to emerging markets and technologies or completing graduate studies in top ranked institutions.

2. Contributing to the development of globally competitive economies on a regional and/or national scale.

3. Leading interdisciplinary research, design, and/or policy-making teams in government, academic, or industrial settings.

4. Engaging in life-long learning activities, including professional society membership and support, conference attendance, presentations or organization, and knowledge-transfer or community-based outreach activities in their organizations.

5. Conducting themselves in the engineering professions in a manner which holds paramount the importance of public health, safety and
welfare, as well as their own ethical responsibilities.

Program Outcomes
Engineering programs must demonstrate that their students attain:

a. an ability to apply knowledge of mathematics, science, and engineering;

b. an ability to design and conduct experiments, as well as to analyze and interpret data;

c. an ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability;

d. an ability to function on multidisciplinary teams;

e. an ability to identify, formulate, and solve engineering problems;

f. an understanding of professional and ethical responsibility;

g. an ability to communicate effectively;

h. the broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context;

i. a recognition of the need for, and an ability to engage in, life long learning;

j. a knowledge of contemporary issues; and

k. an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.

More details about program educational objectives and outcomes can be found at http://www.matscieng.sunysb.edu/abet/.

In addition to preparation for graduate study in engineering and materials science, the program in engineering science prepares students for a variety of employment opportunities as it is particularly suited to the nature of modern manufacturing processes in industry as well as to scientific institutions and laboratories. Throughout the curriculum, students develop skills needed to participate in the research experience and are encouraged to become involved in the many state-of-the-art research facilities associated with the Department, including world-class laboratories in polymer engineering, thermal spray research, surface science and engineering, nanotechnology, semiconductor materials and crystal growth, and environmental materials engineering. Graduates of the program, trained to understand the materials and forces of nature and to apply that knowledge to practical problem solving, occupy engineering, scientific, and management positions in development, manufacturing, and marketing in major corporations in areas including communications, computing, and aerospace. Small and medium-sized companies also rely on the expertise of materials scientists in design and manufacturing. In addition, some graduates apply their knowledge to patent law and consulting. About ten percent of the program's graduates pursue advanced degrees in engineering research as well as in law, business, and medicine. The program in engineering science is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology.

Courses Offered in Engineering Science (ESG)
See the Course Descriptions listing in this Bulletin for complete information.

ESG 100 Intro to Engineering Science
ESG 111 C Programming for Engineers
ESG 198 Fundamentals of Engineering Chemistry
ESG 199 Introduction to Undergraduate Research
ESG 201-H Engineering Responses to Society
ESG 217 Engineering Science Design I
ESG 281 Engineering Introduction to the Solid State
ESG 300 Writing in Engineering Science
ESG 301-H Sustainability of the Long Island Pine Barrens
ESG 302 Thermodynamics of Materials
ESG 312 Engineering Laboratory Design II: Methods
ESG 320 Sensor Materials and Devices
ESG 332 Materials Science I: Structure and Properties of Materials
ESG 333 Materials Science II: Electronic Properties
ESG 339 Thin Film Processing of Advanced Materials
ESG 375 Fundamentals of Professional Engineering
ESG 440, 441 Engineering Science Design III, IV
ESG 487 Cooperative Research in Technological Solutions

Courses Offered in Materials Science (ESM)
See the Course Descriptions listing in this Bulletin for complete information.

ESM 212 Introduction to Environmental Materials Engineering
ESM 213 Studies in Nanotechnology
ESM 221 Introduction to Chemistry of Solids
ESM 299 Introduction to Chemistry of Solids
ESM 325 Directed Research in Materials Science
ESM 350 Advanced Engineering Laboratory
ESM 355 Materials and Processes in Manufacturing Design
ESM 359 Polymers
ESM 450 Engineering Systems Laboratory
ESM 475 Undergraduate Teaching Practicum
ESM 488 Cooperative Industrial Practice
ESM 499 Research in Materials Science

Acceptance into the Major in Engineering Science
Freshman and transfer applicants who have specified their interest in the Engineering Science major may be accepted directly into the major upon admission to the University. Students in good academic standing who were admitted to the University but not immediately accepted into the major may apply for acceptance in any semester, but priority for admission to the Engineering Science major is given to those students who have: 1) completed AMS 161 and PHY 132 or their equivalents, 2) earned a g.p.a. of 3.00 in all mathematics and physics courses with no more than one grade in the C range, and 3) received completed course evaluations for all transferred courses that are to be used to meet requirements for the major.

Courses with a # must be completed with a grade of C or higher.

Requirements for the Major in Engineering Science (ESG)

The major in Engineering Science leads to the Bachelor of Engineering degree. Completion of the major requires approximately 131 credits.

A. Core

1. Mathematics
   - AMS 151, 161; AMS 261 or MAT 203; AMS 361 or MAT 303
   Note: The following alternate calculus course sequences may be substituted for AMS 151, 161 in major requirements or prerequisites:
   - MAT 125, 126, 127
   - or MAT 131, 132
   - or MAT 141, 142
   - or MAT 171

2. Natural Sciences
   - PHY 131/133 and 132/134; PHY 251 or ESG 281; ESG 198
   Note:
   - a. The physics course sequence PHY 125, 126, 127 or 141, 142 is acceptable in lieu of PHY 131/133, 132/134
   - b. The chemistry course sequence CHE 131, 132, and 133 or CHE 141, 142, and 143 is acceptable in lieu of ESG 198.
   - c. Computer Science: ESG 111
   Note: CSE 114 or CSE 130 or ESE 124 may be substituted with permission of the department.

3. Engineering Science
   - ESG 100; ESG 312; ESM 350; ESM 450; and the following nine courses:
   - Materials Science and Engineering ESG 302, 332, 333, 339
   - Electrical Engineering and Electronic Properties ESE 271, ESM 336
   - Mechanical Engineering and Properties MEC 260, MEC 262, ESM 335
   - Engineering Synthesis and Design ESG 217, 316, 440, 441; ESM 355

B. Engineering Specialization and Technical Electives

The area of specialization, composed of five technical electives including at least two design-oriented courses, (or four electives plus the upper-division prerequisite in electrical engineering, ESE 372, or mechanical engineering, MEC 363) must be declared in writing by the end of the junior year. It is selected in consultation with a faculty advisor to ensure a cohesive course sequence with depth at the upper level. The seven areas of specialization are biomedical engineering, civil and environmental engineering, electrical engineering, materials science and engineering, mechanical and manufacturing engineering, nanoscale engineering, and engineering management.

C. Upper-Division Writing Requirement: ESG 300 Writing in Engineering Science

All degree candidates must demonstrate skill in written English at a level acceptable for Engineering Science majors. The Engineering Science student must register for the writing course ESG 300 concurrently with ESG 312. The quality of writing in the technical reports submitted for ESG 312 is evaluated and students whose writing does not meet the required standard are referred for remedial help. Detailed guidelines are provided by the Department.

If the standard of writing is judged acceptable, the student receives an S grade for ESG 300, thereby satisfying the requirement.

Grading

www.stonybrook.edu/ugbulletin 207
All courses taken to satisfy Requirements A and B above must be taken for a letter grade. A grade of C or higher is required in the following courses (or their equivalents):

1. AMS 151, 161; PHY 131/133 and 132/134; ESG 217, 302, 312, 332
2. Each of the five required technical electives offered by the college.

Areas of Specialization

Each area of specialization requires two design-related courses and three elective courses above those used toward Requirement A, Core. Other technical electives may be substituted only with the approval of the undergraduate program director.

Biomedical Engineering

Biomedical engineering is the application of various engineering disciplines to biomedical problems, requiring sound understanding of an engineering discipline coupled with principles of biology and medicine. Students utilize elective courses to learn the fundamentals of biology and bioengineering.

1. One of the following two-course design sequences must be completed.
   a. ESM 334 Materials Engineering
   ESM 335 Strength of Materials
   b. MEC 310 Introduction to Machine Design
   MEC 410 Design of Machine Elements
   c. MEC 305 Heat and Mass Transfer
   MEC 364 Introduction to Fluid Mechanics

2. Three courses from the following:
   BIO 202 Fundamentals of Biology: Molecular and Cellular Biology
   BIO 203 Fundamentals of Biology: Cellular and Organ Physiology
   BIO 328 Mammalian Physiology
   BME 301 Biocircuitry
   BME 303 Engineering Methods in Biomechanics
   BME 304 Genetic Engineering
   BME 305 Biofluids
   ESM 353 Biomaterials: Manufacture, Properties, and Applications
   ESM 488 or 499 (See Note)
   ESG 440/441 Engineering Science Design III/IV (See Note)

Note: Three credits of research (ESM 499 or 488) may be used as a technical elective with permission of the undergraduate program director.

Civil and Environmental Engineering

Civil and environmental engineering entails study, research, and design of infrastructure or processes responding to societal needs for sustainable development. The student completes one of two specializations. Each provides preparation for further study or employment in structural materials engineering, environmental remediation, or engineering involving design for environment (DFE).

Civil Engineering Track:

1. Two required courses:
   a. ESM 334 Materials Engineering
   b. GEO/MAR 318 Engineering Geology and Coastal Processes
   or GEO 309 Structural Geology
   or MEC 364 Introduction to Fluid Mechanics

2. Three technical electives chosen from the following:
   GEO 316 Geochemistry of Surficial Sediments
   ATM 397 Air Pollution and Its Control
   CHE 312 Physical Chemistry
   ESE 380 Embedded Microprocessor Systems Design
   ESM 488 Cooperative Industrial Practice (3 credits)
   or ESM 499 Research in Materials Science (3-4 credits)
   or other departmental independent research with permission of the program director

Note: ESG 440/441 Engineering Science Design III, IV (See Note)

Civil and Environmental Engineering

Civil and environmental engineering entails study, research, and design of infrastructure or processes responding to societal needs for sustainable development. The student completes one of two specializations. Each provides preparation for further study or employment in structural materials engineering, environmental remediation, or engineering involving design for environment (DFE).

Environmental Engineering Track:

1. Two required courses:
   ESM 212 Intro to Environmental Materials Engineering or
   ESM 318 Chemical Engineering Fluid Mechanics or
   MEC 364 Introduction to Fluid Mechanics or
   BME 305 Biofluids

   and CHE 312 Physical Chemistry Short Course (or CHE 301 Physical Chemistry I)

CHE 312 Physical Chemistry

2. Three technical electives chosen from:
   CME 318 Chemical Engineering Fluid Mechanics or
   MEC 364 Introduction to Fluid Mechanics or
   BME 305 Biofluids may be taken as a technical elective if not taken as a required course

EO 313 Sensor Materials and Devices
AMS 322 Groundwater Modeling
GEO 316 Geochemistry of Surficial Processes
GEO/MAR 318 Engineering Geology and Coastal Processes
MAR 301 Environmental Microbiology
MAR 336 Marine Pollution
MAR 394 Environmental Toxicology and Public Health
ATM 397 Air Pollution and Its Control
CHE 361 Nuclear Chemistry
CHE 362 Nuclear Chemistry Laboratory
EM 488 Cooperative Industrial Practice (3 credits)
or ESM 499 Research in Materials Science (3-4 credits)
or other departmental independent research with permission of the program director

ESG 440, 441 Engineering Science Design III, IV (See Note)

Note: ESM 440/441 Engineering Science Design III/IV counts for one technical elective with permission of the instructor and the undergraduate program director.

Electrical Engineering

This specialization is intended to provide a depth of understanding of electronic devices, electronic materials, and electrical and electronic system design built upon the broad engineering science curriculum.

1. One of the following two-course design sequences:
   a. ESE 218 Digital Systems Design
   or ESE 390 Embedded Microprocessor Systems Design
   or ESE 380 Embedded
b. ESE 305 Deterministic Signals and Systems and ESE 315 Control Systems Design

2. ESE 372 Electronics

3. Two courses chosen from the following:
   - ESE 304 Applications of Operational Amplifiers
   - ESE 306 Random Signals and Systems
   - ESE 307 Analog Filter Design
   - ESE 310 Electrical Circuit Analysis II
   - ESE 311 Analog Integrated Circuits
   - ESE 316 Digital Devices and Circuits
   - ESE 319 Introduction to Electromagnetic Fields and Waves
   - ESE 332 Semiconductor Device Characterization
   - ESE 350 Electrical Power Systems
   - ESE 352 Electromechanical Energy Converters
   - ESE 358 Computer Vision
   - ESE 362 Optoelectronic Devices and Optical Imaging Techniques
   - ESE 381 Introduction to Machine Elements
   - ESE 398 CO-OP Industrial Experience (3-4 credits)
   - ESM 310 Survey of Probability and Statistics
   - ESM 325 Diffraction Techniques and Structure of Solids
   - ESM 334 Materials Engineering
   - ESM 335 Strength of Materials
   - ESM 369 Polymers
   - ESM 440/441 Engineering Science Design III/IV (See Note)
   - ESM 475 Undergraduate Teaching Practicum
   - ESM 488 Cooperative Industrial Practice (3 credits)
   - ESM 499 Research in Materials Science (3-4 credits)
   - ESM 525 Manufacturing Processes
   - ESM 569 Polymers
   - ESM 575 Understanding and Processing Materials
   - ESM 588 Cooperative Industrial Practice (3 credits)
   - ESM 599 Internship
   - ESM 640 Computational Materials Science
   - ESM 699 Research in Materials Science

2. Three courses from the following:
   - ESM 334 Materials Engineering
   - ESM 335 Strength of Materials
   - ESM 369 Polymers
   - ESM 440/441 Engineering Science Design III/IV (See Note)

Note: Three credits of research (ESM 499 or 488) may be used as a technical elective with permission of the undergraduate program director.

Note: ESG 440/441 Engineering Science Design III/IV counts for one technical elective with permission of the instructor and the undergraduate program director.

Nanoscale Engineering

The creation of functional materials and devices which involves controllable processes and transformations at the scale of billionths of a meter promises to become a major focus of future efforts in both engineering and scientific research. With a thorough background in materials science, engineering design, and surface and molecular chemistry and devices, this specialization prepares students for graduate study, as well as professional positions in materials and process engineering and research and development.

1. Two required courses:
   - a. ESM 334 Materials Engineering
   - b. ESG 320 Sensor Materials and Devices

2. Two technical electives chosen from:
   - ESM 369 Polymers
   - CHE 301 Physical Chemistry I
   - CHE 302 Physical Chemistry II
   - CHE 321 Organic Chemistry I
   - CHE 322 Organic Chemistry II
   - CHE 345 Structure and Reactivity in Organic Chemistry
   - BME 381 Nanofabrication in Biomedical Applications
   - ESM 488 Cooperative Industrial Practice (3 credits)
   - ESM 499 Research in Materials Science (3-4 credits)
   - or other departmental independent
research with permission of the program director

ESG 440, 441 Engineering Science Design III, IV (see Note)

Note: ESG 440/441 Engineering Science Design III/IV counts for one technical elective with permission of the instructor and the undergraduate program director.

Engineering Management
Students may take a specialization in Engineering Management consisting of the following courses:

1. Two required courses, EST 392 Engineering and Managerial Economics and ESG 201 Engineering Responses to Society
2. Three technical electives which may be satisfied by the following courses:
   a. BUS 210 Financial Accounting
   b. BUS 330 Principles of Finance
   c. BUS 340 Information Systems in Management
   d. BUS 348 Principles of Marketing
   e. EST 305 Applications Software for Information Management
   f. EST 326 Management for Engineers
   g. EST 327 Marketing for Engineers
   h. EST 391 Technology Assessment
   i. EST 393 Project Management
   j. Another upper level course in Business, Technology and Society, or Economics with the permission of the Undergraduate Program Director

Engineering Chemistry
The Engineering Chemistry major combines work in the Department of Materials Science and Engineering and the Department of Chemistry and leads to the Bachelor of Science degree, awarded through the College of Arts and Sciences. See the major entry for additional information.

Physics of Materials
Physics majors may wish to pursue a career in engineering physics, particularly in the application of solid-state physics to materials science and engineering. After taking five courses in the Department of Materials Science and Engineering, the student may become eligible for the master's degree program. See the physics major entry for additional information.

Bachelor of Engineering Degree/Master of Science Degree Program
An engineering science, engineering chemistry, or physics student may apply at the end of the junior year for admission to this special program, which leads to a Bachelor of Engineering or Bachelor of Science degree at the end of the fourth year and a Master of Science degree at the end of the fifth year. In the senior year, a student in the program takes ESM 511 Thermodynamics of Solids and three credits of ESM 599 Research. In addition, the Senior Design project (ESG 440/441) is planned in consultation with the graduate and undergraduate program directors, as well as the thesis advisor (if the student will be taking a thesis option M.S.) to ensure that it meets the needs of the M.S. program. In the fifth year the student takes 24 graduate credits, of which at least 15 credits are coursework and three credits are ESM 599. The advantages of this program over the regular M.S. program are that a student may start his or her M.S. thesis in the senior year, and that he or she needs only 24 credits in the fifth year as opposed to 30 credits for a regular M.S. student. For details of the M.S. degree requirements, see the Graduate Bulletin.
