**Electrical Engineering (ESE)**

**Major and Minor in Electrical Engineering**

**Department of Electrical and Computer Engineering, College of Engineering and Applied Sciences**

**CHAIRPERSON:** Serge Luryi  
**UNDERGRADUATE PROGRAM DIRECTOR:** Ridha Kamoua  
**SENIOR STAFF ASSISTANT:** Carolyn Huggins

**Office:** 267 Light Engineering  
**Phone:** (631) 632-8415  
**E-mail:** postmaster@ece.sunysb.edu  
**Web Address:** http://www.ece.sunysb.edu

Minors of particular interest to students majoring in Electrical or Computer Engineering: Applied Mathematics and Statistics (AMS), Computer Science (CSE), Science and Engineering (SE).

---

**Faculty**

Gregory L. Belenky, Professor, Ph.D., Institute of Semiconductors, Kiev, Ukraine; D.Sc., Institute of Physics and Mathematics, Baku, Russia: Semiconductor devices; physics and technology; lasers for telecommunication.

Monica Fernandez Bugallo, Assistant Professor, Ph.D., University of A Coruna, Spain: Statistical signal processing and its applications to multuser communications, smart antenna systems, target tracking and vehicle positioning and navigation.

Sheldon S. Chang, Professor Emeritus, Ph.D., Purdue University: Optimal control; energy conservation; information theory; economic theory.

Chi-Tsong Chen, Professor, Ph.D., University of California, Berkeley: Systems and control theory; digital signal processing.

Harbans S. Dhodwal, Associate Professor, Ph.D., University of London: Fiber-optic sensors; optical signal processing; photon correlation spectroscopy; inverse problems.

Petrar M. Djuric, Professor, Ph.D., University of Rhode Island: Signal processing; systems theory.

Alex Doboli, Assistant Professor, Ph.D., University of Cincinnati: VLSI; CAD with emphasis on hardware/software co-design; mixed-signal synthesis and high-level systems.

Dmitri Donetski, Assistant Professor, Ph.D., St. Petersburg Technical University, Russia; Ph.D. Stony Brook University: Design of long-wavelength detectors; photovoltaic cells and high power laser diode arrays.

Mikhail N. Dorozhets, Associate Professor, Ph.D., Russian Academy of Sciences, Novosibirsk: Parallel computer architecture; high-performance systems design.

Vera Gorfinkel, Associate Professor, Ph.D., A.F. Ioffe Physical-Technical Institute, St. Petersburg, Russia: Semiconductor devices, including microwave and optoelectronics.

Sangjin Hong, Assistant Professor, Ph.D., University of Michigan: Low-power VLSI design of multimedia wireless communications and digital signal processing systems, including SOC design methodology and optimization.

Serge Luryi, Professor, Ph.D., University of Toronto: High speed solid-state electronic and photonic devices; semiconductor physics and technology.

John Murray, Associate Professor, Ph.D., University of Notre Dame: Signal processing; systems theory.

Jayantkumar P. Parekh, Professor, Ph.D., Polytechnic Institute of Brooklyn: Microwave acoustics; microwave magnetics; microwave electronics; microcomputer applications.

Thomas G. Robertazzi, Professor, Ph.D., Princeton University: Computer communications; performance evaluation; parallel processing.

Yacov Shamash, Professor, Ph.D., Imperial College: Control systems and robotics.

Leon Shterengas, Assistant Professor, Ph.D., Stony Brook University: High power and high speed light emitters; carrier dynamics in nanostructures; molecular beam epitaxy.

Kenneth L. Short, Professor, Ph.D., Stony Brook University: Digital system design; embedded microprocessor systems; instrumentation.

Recipient of the State University Chancellor’s Award for Excellence in Teaching, 1985, and the President’s Award for Excellence in Teaching, 1985.

Miliun Stanacevic, Assistant Professor, Ph.D., Johns Hopkins University: Analog and mixed-signal VLSI integrated circuits and systems; adaptive microsystems; implantable electronics.

Muralidhara Subbarao, Professor, Ph.D., University of Maryland at College Park: Computer vision; image processing.

Stephen E. Sussman-Fort, Associate Professor, Ph.D., University of California, Los Angeles: Electronic circuits; CAD; solid-state electronics; electromagnetics; semiconductor devices.

Wendy K. Tang, Associate Professor, Ph.D., University of Rochester: Parallel and distributed processing; massively parallel systems; computer architecture; neural networks.

Hang-Sheng Tuan, Professor, Ph.D., Harvard University: Electromagnetic theory; integrated optics; microwave acoustics.

Xin Wang, Assistant Professor, Ph.D., Columbia University: Mobile and ubiquitous computing; wireless communications and networks; grid and distributed computing; advanced applications and services over Internet and wireless networks.

Yuanxuan Yang, Professor, Ph.D., Johns Hopkins University: Parallel and distributed computing and systems; high speed networks; optical networks; high performance computer architecture; fault-tolerant computing.

**Adjunct Faculty**

Estimated number: 3

**Teaching Assistants**

Estimated number: 30

---

The Department of Electrical and Computer Engineering offers two majors leading to the Bachelor of Engineering (B.E.) degree. The Department’s teaching and research areas include computer engineering, computer networks, microprocessors, computer architecture, communications, signal and image processing, pattern recognition, electronic circuits, solid-state electronics, lasers and fiber-optics, electromagnetics, microwave electronics, systems and control, biomedical engineering, VLSI, computer-aided design, parallel and distributed processing, computer vision, and computer graphics. Both program majors are accredited by the Accreditation Board of Engineering and Technology (ABET).

The objective of the Electrical and Computer Engineering programs is to give students an excellent preparation for professional careers or graduate studies in the electrical and computer engineering fields. The programs provide students with depth and breadth of knowledge in engineering science and engineering design as well as in mathematics and the natural sciences. Development of non-technical skills such as communication and teamwork is also emphasized. The curriculum of the two programs is shared in the freshman year and diverges in the sophomore year.

Electrical Engineering students may choose a specialization which is completed in the junior and senior years. See the Computer Engineering entry in the alphabetical listing of Approved Majors, Minors, and Programs for the requirements for that major.

---

*Spring 2009: updates since Spring 2007 are in red*
Program Educational Objectives

The undergraduate program in electrical engineering has the following five specific program educational objectives (PEOs):

1. Graduates should excel in engineering positions in industry and other organizations that emphasize design and implementation of engineering systems and devices.
2. Graduates should excel in the best graduate schools, reaching advanced degrees in engineering and related disciplines.
3. Within several years from graduation our alumni should have established a successful career in an engineering-related multidisciplinary field, possibly leading or participating effectively in interdisciplinary engineering projects, as well as continuously adapting to changing technologies.
4. We expect our graduates to continue personal development through professional study and self-learning.
5. We expect our graduates to be good citizens and cultured human beings, as well as to appreciate the importance of professional, ethical, and societal responsibilities.

Program Outcomes

To prepare students to meet the above program educational objectives, a set of program outcomes that describes what students should know and be able to do when they graduate, have been adopted.

We expect our graduates to attain:

- an ability to apply knowledge of mathematics, science, and engineering;
- an ability to design and conduct experiments, as well as to analyze and interpret data;
- an ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability;
- an ability to function on multidisciplinary teams;
- an ability to identify, formulate, and solve engineering problems;
- an understanding of professional and ethical responsibility;
- an ability to communicate effectively;
- the broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context;
- a recognition of the need for, and an ability to engage in, lifelong learning;
- a knowledge of contemporary issues; and
- an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.

More details about program educational objectives and outcomes can be found at [http://www.ece.sunysb.edu/peos](http://www.ece.sunysb.edu/peos).

Following graduation many students choose immediate employment in industry from Long Island to the West Coast. Electrical and computer engineers are recruited in diverse fields for a variety of challenging positions: a communications engineer may work on improving the flow of traffic in communications networks; a command and control engineer may work on systems in tactical and traffic control, satellite and surveillance systems, or in commercial applications; a circuit design engineer designs, develops, and manufactures electronic circuits for many applications including microprocessors; and computer engineers design microprocessor-based systems that include a range of consumer products, industrial machinery, and specialized systems such as those used in flight control, automobiles, and in financial institutions. Graduates also pursue advanced degrees in engineering, business, finance, medicine, law, and other professions in which their problem-solving skills and technical knowledge are valuable qualities.

Courses Offered in Electrical and Computer Engineering

See the Course Descriptions listing in this [Bulletin](http://www.ece.sunysb.edu/bulletin) for complete information.

- ESE 123 Introduction to Electrical and Computer Engineering
- ESE 124 Computer Techniques for Electronic Design I
- ESE 211 Electronics Laboratory A
- ESE 218 Digital Systems Design
- ESE 224 Computer Techniques for Electronic Design II
- ESE 231 Introduction to Semiconductor Devices
- ESE 271 Electrical Circuit Analysis I
- ESE 290 Transitional Study

- ESE 300 Technical Communication for Electrical and Computer Engineers
- ESE 304 Applications of Operational Amplifiers
- ESE 305 Deterministic Signals and Systems
- ESE 306 Random Signals and Systems
- ESE 307 Analog Filter Design
- ESE 310 Electrical Circuit Analysis II
- ESE 311 Analog Integrated Circuits
- ESE 312 Microwave Electronics
- ESE 314 Electronics Laboratory B
- ESE 315 Control System Design
- ESE 316 Digital Devices and Circuits
- ESE 319 Introduction to Electromagnetic Fields and Waves
- ESE 320 Microwave Electronics Laboratory
- ESE 321 Electromagnetic Waves and Wireless Communication
- ESE 322 Introduction to Auto ID Technologies
- ESE 323 RFID Technology for Automatic Identification
- ESE 324 Electronics Laboratory C
- ESE 330 Integrated Electronics
- ESE 332 Semiconductor Device Characterization
- ESE 333 Real-Time Operating Systems
- ESE 337 Digital Signal Processing: Theory
- ESE 340 Basic Communication Theory
- ESE 341 Introduction to Wireless & Cellular Communication
- ESE 342 Digital Communications Systems
- ESE 343 Modern Electronic Communications Laboratory
- ESE 344 Software Techniques for Engineers
- ESE 345 Computer Architecture
- ESE 346 Computer Communications
- ESE 347 Digital Signal Processing: Implementation
- ESE 349 Introduction to Fault Diagnosis of Digital Systems
- ESE 350 Electrical Power Systems
- ESE 351 Energy Conversion
- ESE 352 Electromechanical Energy Converters
- ESE 355 VLSI System Design
Acceptance into the Electrical Engineering Major

Freshman and transfer applicants who have specified their interest in the major in Electrical Engineering may be accepted into the major upon admission to the University. Applicants admitted to the University but not immediately accepted into the Electrical Engineering major may apply for acceptance at any time during the academic year. The Department’s undergraduate committee will consider an application only if the following conditions have been met:

1. the student has completed at least 11 credits of mathematics, physics, or electrical and computer engineering courses required for the major
2. the student has earned a grade point average of 3.00 or higher in these courses with no grade in any of them lower than C

Notes to Sample Course Sequences

Courses with a # must be passed with a grade of C or higher.

Total credits must equal 128 or higher.
3. no courses required for the major have been repeated
4. all transfer courses have been evaluated.

Requirements for the Major in Electrical Engineering (ESE)
The curriculum begins with a focus on basic mathematics and natural sciences followed by courses that emphasize engineering science and bridging courses that combine engineering science and design. The series of courses culminates in a one-year design experience that integrates various engineering skills and knowledge acquired. Technical elective courses are also required according to the student’s chosen specialization. The core sequence, technical electives, and additional courses may be chosen in consultation with a faculty advisor, taking into consideration the particular interest of the student.

Completion of the major requires approximately 100 credits.

1. Mathematics
   AMS 151, 161 Applied Calculus I, II
   AMS 261 or MAT 203 Applied Calculus III
   AMS 361 or MAT 303 Applied Calculus IV
   AMS 210 or MAT 211 Linear Algebra
   Note: The following alternate calculus course sequences may be substituted for AMS 151, 161 in major requirements or prerequisites:
   MAT 125, 126, 127
   or MAT 131, 132
   or MAT 141, 142
   or MAT 171

2. Natural Sciences
   PHY 131/133, 132/134 Classical Physics I, II and Laboratories
   CHE 131 General Chemistry I and Laboratory
   Note: The physics course sequence PHY 125, 126, 127 or 141, 142 is accepted in lieu of PHY 131/133, 132/134. (Students are advised to take PHY 127 before PHY 126.)
   The chemistry course sequence CHE 141 and 143 or ESG 198 are accepted in lieu of CHE 131 and 133.

3. Freshman Introduction to Electrical Engineering
   ESE 123 Introduction to Electrical and Computer Engineering
   ESE 124 Computer Techniques for Electronic Design I

4. Core Courses
   ESE 211 Electronics Lab A
   ESE 218 Digital Systems Design
   ESE 224 Computer Techniques for Electronic Design II
   ESE 231 Introduction to Semiconductor Devices
   ESE 271 Electrical Circuit Analysis
   ESE 305 Deterministic Signals and Systems
   ESE 306 Random Signals and Systems
   ESE 314 Electronics Laboratory B
   ESE 319 Introduction to Electromagnetic Fields and Waves
   ESE 324 Electronics Laboratory C
   ESE 337 Digital Signal Processing Theory
   ESE 372 Electronics
   ESE 380 Embedded Microprocessor Systems Design I

5. Specializations
   Students must select the general track or one of the two specializations by the end of the sophomore year.
   a. General
      4 ESE technical electives and 2 non-ESE technical electives
   b. Microelectronics
      ESE 304 Applications of Operational Amplifiers
      ESE 311 Analog Integrated Circuits
      ESE 330 Integrated Electronics
      ESE 355 VLSI System Design
      ESE 373 RF Electronics for Wireless Communications
      1 non-ESE technical elective
   c. Telecommunications
      ESE 340 Basic Communication Theory
      ESE 342 Digital Communications Systems
      ESE 346 Computer Communications
      ESE 347 Digital Signal Processing: Implementation

6. Design
   ESE 400 and 441, Engineering Design I and II. Students who select the Microelectronics or Telecommunications specialization must complete a senior design project designated for the relevant area.
   Note: ESE 440 and 441 are engineering design project courses that must be carried out at Stony Brook under the supervision of an Electrical and Computer Engineering faculty member.

7. Upper-Division Writing Requirement: ESE 300 Writing in Electrical / Computer Engineering
   All degree candidates must demonstrate skill in written English at a level acceptable for Electrical Engineering majors. Students must register for the writing course ESE 300 concurrently with or after completion of ESE 314, 324, 380, or 382. Students whose writing does not meet the required standard are referred for remedial help. Detailed guidelines are provided by the Department.

Grading
   All courses taken for the major must be taken for a letter grade. A grade of C or higher is required in the following courses:
   1. ESE 211, ESE 218, ESE 231, ESE 271, ESE 300, ESE 337, ESE 372, AMS 151, AMS 161 (or MAT 131, MAT 132), PHY 131, PHY 132
   2. For students in the Microelectronics Specialization: ESE 304, ESE 311, ESE 330, ESE 355, ESE 373
   3. For students in the Telecommunications Specialization: ESE 340, ESE 342, ESE 346, ESE 347, ESE 363
   4. For students in the General Track: Four ESE Technical Electives and one technical elective.
Requirements for the Combined B.E./M.S. degrees in Electrical Engineering

The intent of the combined five-year Bachelor of Engineering and Master of Science in Electrical Engineering program is to prepare high-achieving and highly-motivated undergraduate electrical engineering students for either doctoral studies or a variety of advanced professional positions. Electrical engineering students interested in the combined program should apply through the undergraduate office of the Department of Electrical and Computer Engineering. The program is highly selective and is offered to the top 10 to 20 percent of the junior undergraduate class. Admission is based on academic performance (at least a major g.p.a. of 3.40) as well as undergraduate research and professional activities. The combined program is as rigorous as the current B.E. and M.S. programs taken separately. The requirements for the combined program are the same as the requirements for the B.E. and M.S. programs except that two 300-level electives in the B.E. program are substituted by two 500-level graduate courses. Therefore six graduate credits will be counted towards the undergraduate degree. Detailed guidelines and sample course sequences are provided by the Department.

Requirements for the Minor in Electrical Engineering (ESE)

The Electrical Engineering minor is intended for students with majors other than Electrical or Computer Engineering who seek to complement their chosen major through an introduction to the principles and techniques of electrical engineering. Students interested in the minor should apply through the office of the Department of Electrical and Computer Engineering, as early as possible. A cumulative grade point average of 2.75 is required for admission to the minor.

Students seeking to complete the ESE minor must meet the relevant prerequisites and corequisites of each ESE course.

At least nine credits must be in upper-division courses. All courses for the minor must be passed with a letter grade of C or higher.

Completion of the minor requires 21 credits.

1. ESE 123 (4 credits)
2. ESE 271 (4 credits)
3. Four or five ESE courses for a total of at least 13 credits.

Note: Students may not take ESE 124, 275, 300, 324, 440, 441, 475, 476, 488, or 499 for credit toward the minor.
