Flourishing as the Goal of Compassionate Healthcare?

Matthew T. Lee, PhD

Interest in enhancing compassion in healthcare is growing, for patients as well as healthcare workers. As a result, we have learned much about how to respond to the multifaceted nature of suffering in its physical, psychological, social, and spiritual forms, and its relation to disengagement and burnout among physicians, nurses, and others in the healing professions. What if we pushed beyond the reduction of suffering and leaned more towards full flourishing as the goal of compassionate healthcare? This presentation explores how we might organize healthcare differently in order to create a social architecture that encourages more complete forms of well-being for everyone in the healthcare sector. We will discuss the integration of practical tools that support this transition, including new empirical measures of individual and community flourishing, caring climate, and compassion climate.
