

# Robert F. Schneider

Associate Professor of Chemistry  
1960-2013

Scientist, Administrator, Teacher

Chlorine and Antimony Nuclear  
Quadrupole Resonance in  $\text{SbCl}_5\text{CH}_3\text{CN}$ ,  
 $\text{SbCl}_5\text{POCl}_3$ , and  $\text{SbCl}_5$ , *The Journal of  
Chemical Physics*, **47**, 2343 (1962).

Professor Schneider's research program focused on use of Nuclear Quadrupole Resonance to study bonding and structure in inorganic chlorides. His 29-year service as head of the campus Research Administration office paved the way for Stony Brook's emergence as a major research university, while his supervision of the General Chemistry Laboratory provided for stability and educational quality over 20 years of unprecedented expansion.
