Suggested Bulletin Course Description

Introduction to the basic concepts of mobile cloud computing, including: 1. The mobile computing technology used in modern smart phones; 2. The cloud computing technologies used in existing data centers; 3. The synergy of mobile and cloud computing and its applications; 4. Programming on android smart phone utilizing data center services. Students will gain knowledge of: the fundamental principles of mobile cloud computing, the major technologies that support mobile cloud computing, the current challenges and primary areas of research within the field of mobile cloud computing, and a basic understanding of the role of mobile cloud computing in the context of the everyday living.

Prerequisites: ESE 224 or CSE230 (Introduction to Programming in C and C++). The course assumes a basic understanding of programing and software, but critical elements such as operating systems will be reviewed in this course.

Spring 2015
Stony Brook University
Department of Electrical & Computer Engineering
College of Engineering and Applied Sciences
Course Title: Mobile Cloud Computing
Course Instructor: Prof. Shan Lin

Instructor and Office Hours

Instructor: Shan Lin
Email: shan.lin.3@stonybrook.edu
Office Location: Light Eng. 249
Office Phone: 631-632-8398
Office Hours: TBD
Location: TBD
Time: TBD
Course Description
Introduction to the basic concepts of mobile cloud computing, including: 1. The mobile computing technology used in modern smart phones; 2. The cloud computing technologies used in existing data centers; 3. The synergy of mobile and cloud computing and its applications; 4. Programming on android smart phone utilizing data center services. Students will gain knowledge of: the fundamental principles of mobile cloud computing, the major technologies that support mobile cloud computing, the current challenges and primary areas of research within the field of mobile cloud computing, and a basic understanding of the role of mobile cloud computing in the context of the everyday living.

LEARNING OBJECTIVES
At the end of this course, students will:
1. Understand the evolution of computing paradigm in the past decade
2. Understand the basic multicore architecture on modern smart phone platform
3. Know how to program smart phones to utilize its computing resources
4. Understand the basic data center structure and their computing process
5. Know how to write a program to access cloud resources
6. Understand supporting technologies on the smart phones
7. Understand standards of existing technologies and their challenges
8. Know how to access and control these technologies
9. Understand the distinct and complementary features of the mobile and cloud computing
10. Understand the underlying principles of mobile cloud applications
11. Know how to design, simulate, and program mobile cloud applications
12. Understand the economic impact and technological issues relevant to mobile cloud computing applications, and know how to measure, analyze, and evaluate such applications with real systems.

The learning objectives 7, 8, 11 are tailored for graduate students and not enforced to undergrads.

COURSE REQUIREMENTS

Attendance and Make Up Policy
Late work will not be accepted. Attendance at all exams is mandatory. In the case of 1) verifiable illness, 2) verifiable family emergency, 3) University-sanctioned religious holiday, or 4) participation in official University-sponsored events (for documented student athletes only), excuse must be documented on official letterhead (as appropriate) and will be verified by the instructor.

**Textbook and Reading**

Other readings for this course will be in the form of research papers, which will be distributed to students online.

**Topics and semester schedule**

Grading

Your grade will be based on attendance, paper reviews (written and oral), programming assignments, a midterm exam, and the final project.

<table>
<thead>
<tr>
<th>Attendance and participation</th>
<th>10%</th>
</tr>
</thead>
<tbody>
<tr>
<td>Paper reviews</td>
<td>15%</td>
</tr>
<tr>
<td>Programming assignments</td>
<td>15%</td>
</tr>
<tr>
<td>Midterm exam</td>
<td>20%</td>
</tr>
<tr>
<td>Final project</td>
<td>40%</td>
</tr>
</tbody>
</table>

Undergrad and graduate will be evaluated with different standards on midterm exam, lab assignment, and final project. For graduate, there will be 2-3 extra questions in midterm exam, and one extra task in each programming assignment. As to the final project, graduate student needs to complete a system with both mobile and cloud computing elements and demonstrate their interactions. Undergrads don’t need to design specifically for the mobile and cloud computing tradeoffs.

Disability

If you have a physical, psychological, medical or learning disability that may impact your course work, please contact Disability Support Services, 128 ECC Building (631) 632-6748. They will determine with you what accommodations are necessary and appropriate. All information and documentation is confidential.

Students who require assistance during emergency evacuation are encouraged to discuss their needs with their professors and Disability Support Services. For procedures and information go to the following web site: http://www.ehs.sunysb.edu and search Fire Safety and Evacuation and Disabilities.

Honor Policy

- All exams, homework, and project assignments are subject to this Honor policy. This means that placing your name on an exam or an assignment implicitly pledges that
you abided by the terms of this policy.

- The homework assignments are to be done alone. Any malpractice (e.g., reporting fraudulent data, copying another student’s solution, plagiarism) will be treated as an Honor Code violation.

- For the project, collaboration with other people or groups is allowed, but collaboration does not mean copying each others’ solutions. Such collaboration should be limited to discussing concepts. You must understand the project that you turn in and be able to explain and defend it.

Any suspected instance of academic dishonesty will be reported to the Academic Judiciary. For more comprehensive information on academic integrity, including categories of academic dishonesty, please refer to the academic judiciary website at http://www.stonybrook.edu/uaa/academicjudiciary/
