Join Robert P. Crease, our Darwin Day lecturer and the Chair of the Department of Philosophy at Stony Brook University, to learn about his upcoming book The Workshop and the World: What Ten Thinkers Can Tell Us about Science and Authority (Norton) to be published next month. The book explains why the very features that make science work also provide a veneer of legitimacy to science denial -- and how to combat that.

This event is free and open to the public.

Robert P. Crease has written, translated, or edited over a dozen books on history and philosophy of science, and is Past Chair of the Forum for History of Physics of the American Physical Society. He is Co-editor-in-chief of Physics in Perspective, and for 19 years he has written a column, Critical Point,"on the historical and philosophical dimensions of science for Physics World.
