

Hello, my name is Naryman Lounici, and I am from Long Island, New York, originally born in Paris, France. I recently graduated from Stony Brook University with a Bachelor's in Physics. My research journey began at the LTC, where I worked for over two years under the wonderful guidance of Dr. Eric Jones and Dr. Emily Grace. My involvement started in the summer before my junior year as a Frances Velay Fellow, and I continued my research the following summer as a PSEG Scholar. I focused on refining the lab's optical tweezers, conducting experiments related to it, and learning how to improve its design. I enjoyed every second of it, the people, the work, and was inspired towards the career path I hope to pursue. I am now applying to graduate school for medical physics to further my knowledge and experience, and to apply the tools I've gained from this lab.
