

Title: Environmental Health & Safety Policy	Policy Category: Health & Safety
Issuing Authority: Enterprise Risk Management	Responsibility: Environmental Health & Safety
Publication Date: 11/18/2022	Next Review Date: 11/18/2025

Printed copies are for reference only. Please refer to the electronic copy for the latest version.

Policy Statement/Background:

Stony Brook University (University) is committed to managing its academic, research and health care programs in a manner that protects the global and local human and natural environments, and promotes a safe and healthful campus community.

Policy:

The University uses an [Environmental, Health and Safety Management System](#) (EHSMS) in order to effectively evaluate its operations, identify potential adverse impacts, protect people and the environment, achieve regulatory compliance and promote environmental stewardship on an ongoing basis. The EHSMS is a process that integrates the planning, development and implementation of environmental, health and safety policies, procedures and programs in all facets of the University's mission.

Procedure

The Department of [Environmental Health & Safety](#) (EH&S), under the auspices of Enterprise Risk Management, plans, develops and implements the EHSMS with input from departments, standing committees and individual organizational units. Key elements of the EHSMS include:

- [Environmental Sustainability](#)
- [EH&S Programs](#)
- [EH&S Policies and Procedures](#)
- Departmental Standard Operating Procedures

- University Committees
- Hazard Analysis and Evaluations
- [EH&S Training](#)
- [Awareness and Information](#)
- [Emergency Planning and Response](#)
- Inspections and Audits
- Compliance Tracking
- Management Review
- Continuous Improvement

The Provost and Vice Presidents have primary responsibility for ensuring that the requirements as established by the EHSMS are implemented and supported by all academic, medical, research and administrative departments and programs.

Deans, Chairs and Directors are responsible for implementing the requirements as established by the EHSMS within their designated areas of responsibility to ensure compliance with regulations, safety of personnel and protection of the environment. They shall provide both the resources required to support the EHSMS and the oversight necessary to ensure implementation and compliance with relevant standards and regulations.

Supervisors, including principle investigators, program coordinators and faculty, have direct responsibility for ensuring that provisions of the EHSMS are fully executed. This shall be accomplished through the review of work practices, inspection of facilities, development and implementation of procedures, use of engineering controls and personal protective equipment, mandatory training and the prompt correction of noted deficiencies.

Students, faculty and staff members of the campus community shall follow established procedures, use appropriate safety equipment, report unsafe or hazardous situations and attend required training sessions.

The Department of Environmental Health and Safety shall develop and implement environmental, health and safety policies, procedures and programs to assist departments in complying with the requirements of the EHSMS. This assistance includes, but is not limited to, environmental monitoring, tracking and reporting, hazard analysis, safety training, incident investigation and emergency response. These services are designed to eliminate, reduce or control environmental, safety and health risks and impacts, ensure regulatory compliance and demonstrate environmental excellence through a continuous improvement process.

In the event of emergency, the Assistant Vice President of EH&S (AVP) or Incident Commander has the authority to immediately address any situation that is or may be hazardous to the safety of the campus community or the environment. The AVP shall advise the Vice President for Enterprise Risk Management and Chief Security Officer and recommend appropriate action to be taken.

Sanctions

Any dereliction of responsibility, authority or accountability established by this policy or the EHSMS that may result in a serious physical hazard, exposure, injury or liability shall be brought to the attention of the President.

Managers or supervisors who fail to comply with EHSMS requirements, policies or procedures, including any training requirements for staff or students, may be subject to disciplinary and/or legal action. The University may immediately suspend or revoke departmental purchasing privileges, shut down program or project operations and pursue other remedial actions, as appropriate.
