AFH
Africana Studies/Humanities

AFH 520: The Caribbean and the Literary Imagination
An examination of the literary representation of the Caribbean through an extensive study of selected fictional and theoretical writings. This seminar will include an examination of the representations of the Caribbean by African American as well as Caribbean writers.

3 credits, Letter graded (A, A-, B+, etc.)

AFH 524: Contemporary African Diasporic Literature and Film
Contemporary African American Diasporic Literature and Film offers a comparative analysis of twentieth and twenty-first century African Diasporic writers and filmmakers and their explorations of race, class, and gender. To establish the shifting nature of African Diasporic intellectual thought, we shall consider how each successive generation of writers and filmmakers builds upon discussions of racial identity, black sexuality, and social mobility. To demonstrate how discussions of race have evolved over time texts will be read in conjunction with each other. So for example, Fanon's seminal test Black Skin White Masks, a text that seeks to explain the racialization of society, the double consciousness of black people, and the superiority complex of white people will be read against Paul Gilroy's Against Race, a text arguing for the deconstruction and recognition of race as a cultural construct. Other topics for discussion focus on how newer writers delve into questions of sexuality from a fresh perspective. Comparing Morrison's Sula with Cheryl West's play Before It Hits Home, for example, demonstrates that writers are now exploring questions of sexuality in more provocative ways. West's uncovering of the #downlow# life-style lived by Black men, and the health concerns related and the dangers of sexually transmitted diseases such as HIV/AIDS. Permission from advisor required.

3 credits, Letter graded (A, A-, B+, etc.)

AFH 564: Seminars in Francophone Literature
Close examination of the literature written in French of the Francophone world outside of France, with special emphasis on the literature of the Caribbean and Africa. This course will pose and explore questions such as: What is Francophone literature and what are the implications of a literature considered as "Francophone"? What are the functions of writing in French in a "postcolonial" context? Permission of advisor required.

3 credits, Letter graded (A, A-, B+, etc.)

AFS
Africana Studies/Social and Behavioral Sciences

AFS 500: Foundations in Africana Studies
Core course required of all students pursuing a master's degree in Africana Studies. The first of a two semester foundation sequence, the seminar will introduce students to the theoretical issues and historiography of the Africana Diaspora. The parameters of Africana Diaspora studies will cover the historical, literary, socio-political, cultural, and economic themes of the black experience. The course will provide critical examination of the global experience and promote an understanding of the Black Diaspora. The students will read the works of scholars who shaped the broad intellectual world. The required readings will emphasize canons of Diaspora literature, including works by and about W.E.B. Du Bois, George Padmore, C.L.R. James, Marcus Garvey, and others.

Permission of advisor required.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

AFS 501: Foundations in Africana Studies, II
Core course required of all students pursuing a master's degree in Africana Studies. The two-semester foundation courses will introduce students to the theoretical issues and historiography of the Africana Diaspora. The parameters of Africana Diaspora studies will cover the historical, literary, socio-political, cultural, and economic themes of the black experience. The course will provide critical examination of the global experience and promote an understanding of the Black Diaspora focusing on scholarly works by Paul Gilroy, Chunua Achebe, Henry Louis Gates, Angela Davis, Walter Rodney, and others.

Permission of advisor required.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

AFS 502: Research Methods in Africana Studies
This course introduces students to basic concepts of research methodology, specifically as they pertain to studies of the African diaspora. Students will be exposed to a variety of critical approaches across such disciplines as history, literature, political science, and sociology in the context of Africana studies. Students will examine the ways in which theoretical, ideological, and philosophical assumptions about race, class, and gender shape the kinds of research questions we ask and the types of instruments we use to investigate and evaluate the experiences and contributions of people from the African diaspora.

Permission of advisor required.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

AFS 507: African Music
This is a selective introduction to African music, and the music of the African Diaspora. We will read from major scholars in the field of African music studies such as Simha Arom, Christopher Waterman, Gerhard Kubik, Michele Kisiuki, Ruth Stone, Kofi Agawu, and others. Students will get a broad overview of the music of the major regional subdivisions of Africa (for instance North Africa, Central Africa, South Africa, etc.), as well as a historical perspective on the musicological issues that have been central to Africanism musicology and ethno musicology. There will be regular reading, listening, and short writing assignments, occasional quizzes, a book review, and a final research project of 16-18 pp. For the book review, students will write about a monograph on African Music such as John Miller Chernoff's African Rhythm and African Sensibility or Paul Berliner's The Soul of Mbira. Students will present their research to class towards the end of the term. Permission from course instructor required.

3 credits, Letter graded (A, A-, B+, etc.)
AFS 530: Slavery and the Atlantic World
This course will examine the experiences of people of African descent as participants in a coerced migration that created African Diaspora. The transatlantic slave trade led to an enduring image of black men and women as transported commodities. Therefore, it has had the greatest impact on the construction of the African Diaspora giving rise to new communities of people across the globe.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

AFS 533: Race Gender and Globalization
This seminar explores current issues and debates relating to the racialized and gendered effects of globalization. Topics include an overview of the sociology of globalization and theories of globalization/the global system, transnational migrations and the new global labor market, globalization and race/ethnicity, women and globalization, local-global linkages, and resistance to globalization.
Offered Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)

AFS 540: The Black Power Movement
This course examines the Black Power Movement. Stokely Carmichael's call for "Black Power!" broke through commotion of everyday politics during 1966's Meredith March Against Fear. Soon after, and for the next decade, Black Power Galvanized African American politics, engendering radical movements for social, political, and cultural transformation that impacted blacks in the United States and beyond. An emerging historiography traces the roots of Black Power in the postwar black freedom movement, finding cultural and political touchstones for future Black Power activism among civil rights renegade, trade unionists, and black nationalists. We will examine works produced during the Black Power era and this new scholarship to analyze the Black Power Movement's legacy in the politics and culture of African Americans. Permission of advisor is required. This course is offered as both HIS 540 and AFS 540.
3 credits, Letter graded (A, A-, B+, etc.)

AFS 541: Music and Race: Black Music (Cross Cultural Study & Music)
This seminar will examine how certain widely held conceptualizations about race (and in some instances ethnicity) are articulated, reinforced, or challenged in music making and consumption, on the one hand, and in scholarship about music on the other. Writings on race and music have tended to be about "black" culture(s). In this course we will critique this focus and the construct of black music in great detail. The course requires extensive readings on these topics; listening to musical examples (in-depth knowledge of music theory is not necessary); vigorous class discussion and written reaction papers; a final research paper and class presentation. Students may choose to explore other aspects of music and race besides black music in their final papers (for example, how Orientalism has been constituted in music and musical criticism and scholarship). Permission of advisor required.
3 credits, Letter graded (A, A-, B+, etc.)

AFS 542: Caribbean Transnational Identity in the US
This course seeks to examine the strategies some immigrants from the Caribbean utilize to live their lives simultaneously in the US and the country of origin. To do so, it sheds light on the ways in which the US construction of race and ethnicity influences the immigrants' search for an identity in the United States. Prerequisite: Enrollment in the Graduate Certificate Program Fall, 3 credits, Letter graded (A, A-, B+, etc.)

AFS 550: Women of Color in The Modern World; Shifting Identities and Feminist Visions
This course explores the various ways in which gender, race, and class, along with other aspects of identity, shape the lives and experiences of women of color in the United States and globally. It presents the ongoing debates concerning the interconnections of gender, race and shifting identities. It will examine the relationships between the construction of personal identities, identity statuses, cultural and ideological meaning systems, and the search for alternative images. Permission from advisor required.
3 credits, Letter graded (A, A-, B+, etc.)

AFS 555: Sociology of Gender and Development
The 1960's marked a transition in global economic relations from one characterized by colonial extraction and exploitation, to sustainable development emphasizing economic growth and the alleviation of poverty. It was quickly discovered, however, that the effects of development were beneficial for some but devastating for others, especially poor women. The discovery led many scholars and practitioners, especially those who embrace feminist ideologies, to demand that development agencies and policies be sensitive to gender issues. This seminar will focus on gender and development, in theory and practice, in the global South. It will promote students understanding of the central role that gender plays in the success and assessment of development strategies.
Offered Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

AFS 560: Sexualities African and Caribbean Perspectives
This seminar course is designed to introduce graduate students to the complexities of human sexuality from a perspective that places subaltern individuals at the centre of the analysis. It locates these individuals, and their sexual practices, in the tropics(particularly in Africa and the Caribbean#first in those man-made communities where sexuality was one of the (unspoken) exigencies of the slave and colonial economies, and later in the modern era where these economies have given way to #neo-colonies.#
Offered Spring, 3 credits, Letter graded (A, A-, B+, etc.)

AFS 570: The Black Radical Tradition
This course examines the black radical tradition from slavery to the present, paying particular attention of twentieth century social movements and the intersection between trade unionism, black nationalism, internationalism, and Marxism. Black radicalism has a long history in the United States and beyond. At its core, this tradition has housed diverse, at times conflicting, ideological strains, personalities, and organizations ranging from black feminists, Marxists, socialists, liberals, trade unionists, artists, and intellectuals. In the process this tradition has run afoul of more mainstream expressions of Black protest (although in certain eras# such as during the Black Power Movement - it as represented the mainstream), the black radicals are often marginalized as wild-eye dreams, naive to the ways of the world.
3 credits, Letter graded (A, A-, B+, etc.)

AFS 616: Twentieth Century African Political History
This seminar is an extensive exploration of African Political history in the twentieth century. It examines the major themes that have shaped the formation and the decline of the modern African state since the imposition of colonial rule in the late nineteenth century. Drawing from monographs and journal articles on twentieth century African social and political history, and the recent scholarship on state/society relations, the seminar will explore the interactions between state institutions and #structures of society# in colonial and
AMS 501: Differential Equations and Boundary Value Problems I
Prerequisite: AMS 505
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

AMS 502: Differential Equations and Boundary Value Problems II
Analytic solution techniques for, and properties of solutions of, partial differential equations, with concentration on second order PDEs. Techniques covered include: method of characteristics, separation of variables, eigenfunction expansions, spherical means, Green's functions and fundamental solutions, and Fourier transforms. Solution properties include: energy conservation, dispersion, dissipation, existence and uniqueness, maximum and mean value principles.
3 credits, Letter graded (A, A-, B+, etc.)

AMS 503: Applications of Complex Analysis
A study of those concepts and techniques in complex function theory that are of interest for their applications. Pertinent material is selected from the following topics: harmonic functions, calculus of residues, conformal mapping, and the argument principle. Application is made to problems in heat conduction, potential theory, fluid dynamics, and feedback systems.
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

AMS 504: Foundations of Applied Mathematics
An introductory course for the purpose of developing certain concepts and techniques that are fundamental in modern approaches to the solution of applied problems. An appropriate selection of topics is based on the concepts of metric spaces, compactness, sequences and convergence, continuity, differentiation and integration, function sequences, contraction mapping theorem. Strong emphasis on proofs.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

AMS 505: Applied Linear Algebra
Review of matrix operations. Elementary matrices and reduction of general matrices by elementary operations, canonical forms, and inverses. Applications to physical problems. Offered as AMS 505 or HPH 695.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

AMS 506: Finite Structures
Problem solving in combinatorial analysis and graph theory using generating functions, recurrence relations, Polya's enumeration formula, graph coloring, and network flows.
3 credits, Letter graded (A, A-, B+, etc.)

AMS 507: Introduction to Probability
The topics include sample spaces, axioms of probability, conditional probability and independence, discrete and continuous random variables, jointly distributed random variables, characteristics of random variables, law of large numbers and central limit theorem, Markov chains.
3 credits, Letter graded (A, A-, B+, etc.)

AMS 510: Analytical Methods for Applied Mathematics and Statistics
Review of techniques of multivariate calculus, convergence and limits, matrix analysis, vector space basics, and Lagrange multipliers.
Prerequisite: A course in linear algebra and in multivariate calculus
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

AMS 511: Foundations of Quantitative Finance
Introduction to capital markets, securities pricing and modern portfolio theory, including the organization and operation of securities market, the Efficient Market Hypothesis and its implications, the Capital Asset Pricing Model, the Arbitrage Pricing Theory and more general factor models. Common stocks and their valuation, statistical analysis, and portfolio selection in a single-period, mean-variance context will be explored along with its solution as a quadratic program. Fixed income securities and their valuation, statistical analysis, and portfolio selection. Discussion of the development and use of financial derivatives. Introduction to risk neutral pricing, stochastic calculus and the Black-Scholes Formula. Whenever practical examples will use real market data. Numerical exercises and projects in a high-level programming environment will also be assigned.
3 credits, Letter graded (A, A-, B+, etc.)

AMS 512: Capital Markets and Portfolio Theory
Development of capital markets and portfolio theory in both continuous time and multi-period settings. Utility theory and its application to the determination of optimal consumption and investment policies. Asymptotic growth under conditions of uncertainty. Applications to problems in strategic asset allocation over finite horizons and to problems in public finance. Whenever practical, examples will use real market data. Numerical exercises and projects in a high-level programming environment will also be assigned.
3 credits, Letter graded (A, A-, B+, etc.)

AMS 513: Financial Derivatives and Stochastic Calculus
Further development of derivative pricing theory including the use of equivalent martingale measures, the Girsanov Theorem, the Radon-Nikodym Derivative, and a deeper, more general understanding of the Arbitrage Theorem. Numerical approaches to solving stochastic PDE's will be further developed. Applications involving interest rate sensitive
securities and more complex options will be introduced. Whenever practical examples will use real market data. Numerical exercises and projects in a high-level programming environment will also be assigned.

3 credits, Letter graded (A, A-, B+, etc.)

AMS 514: Computational Finance

Review of foundations: stochastic calculus, martingales, pricing, and arbitrage. Basic principles of Monte Carlo and the efficiency and effectiveness of simulation estimators. Generation of pseudo- and quasi-random numbers with sampling methods and distributions. Variance reduction techniques such as control variates, antithetic variates, stratified and Latin hypercube sampling, and importance sampling. Discretization methods including first and second order methods, trees, jumps, and barrier crossings. Applications in pricing American options, interest rate sensitive derivatives, mortgage-backed securities and risk management. Whenever practical examples will use real market data. Extensive numerical exercises and projects in a general programming environment will also be assigned.

3 credits, Letter graded (A, A-, B+, etc.)

AMS 515: Case Studies in Computational Finance

Actual applications of Quantitative Finance to problems of risk assessment, product design, portfolio management and securities pricing will be covered. Particular attention will be paid to data collection and analysis, the design and implementation of software, and, most importantly, to differences the occur between "theory and practice" in model application, and to the development of practical strategies for handling cases in which "model failure" makes the naive use of quantitative techniques dangerous. Extensive use of guest lecturers drawn from the industry will be made.

3 credits, Letter graded (A, A-, B+, etc.)

AMS 516: Statistical Methods in Finance

The course introduces statistical methods in quantitative finance. Financial applications and statistical methodologies are intertwined in all lectures. The course will cover regression analysis and applications to the Capital Asset Pricing Model and multifactor pricing models, principal components and multivariate analysis, statistical methods for financial time series; value at risk, smoothing techniques and estimation of yield curves, and estimation and modeling volatilities.

Prerequisite: AMS 586 or permission of the instructor

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

May be repeated 2 times FOR credit.

AMS 517: Quantitative Risk Management

Quantitative Methods for risk management problems including market risk, credit risk, operational risk and Basel II accord. Multivariable models; extreme value theory; structure and reduced-form models of default; and copula-based models.

3 credits, Letter graded (A, A-, B+, etc.)

May be repeated 2 times FOR credit.

AMS 518: Advanced Stochastic Models, Risk Assessment, and Portfolio Optimization

The course provides a thorough treatment of advanced risk measurement and portfolio optimization, extending the traditional approaches to these topics by combining distributional models with risk or performance measures into one framework. It focuses on, among others, the fundamentals of probability metrics and optimization, new approaches to portfolio optimization, and a variety of essential risk measures. Numerical exercises and projects in a high-level programming environment will be assigned.

3 credits, Letter graded (A, A-, B+, etc.)

May be repeated for credit.

AMS 519: Internship in Quantitative Finance

Supervised internship in financial institution. Students will typically work at a trading desk, in an asset management group, or in a risk management group. Students will be supervised by a faculty member and a manager at their internship site. Written and oral reports will be made to both supervisors.

3-6 credits,

May be repeated 1 times FOR credit.

AMS 520: Bayesian Methods in Finance

The course explores in depth the fundamentals of the Bayesian methodology and the use of the Bayesian theory in portfolio and risk management. It focuses on, among other topics, incorporating the prior views of analysts and investors into the asset allocation process, estimating and predicting volatility, improving risk forecasts, and combining the conclusions of different models. Numerical exercises and projects in a high-level programming environment will be assigned.

3 credits, Letter graded (A, A-, B+, etc.)

May be repeated for credit.

AMS 523: Mathematics of High Frequency Finance

Elements of real and complex linear spaces. Fourier series and transforms, the Laplace transform and z-transform. Elements of complex analysis including Cauchy theory, residue calculus, conformal mapping and Mobius transformations. Introduction to convex sets and analysis in finite dimensions, the Legendre transform and duality. Examples are given in terms of applications to high frequency finance.

Offered
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

AMS 526: Numerical Analysis I

Corequisite: AMS 505 and AMS 595

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

AMS 527: Numerical Analysis II

Numerical methods based upon functional approximation: polynomial interpolation and approximation; and numerical differentiation and integration. Solution methods for ordinary differential equations. AMS 527 may be taken whether or not the student has completed AMS 526.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

AMS 528: Numerical Analysis III

An introduction to scientific computation, this course considers the basic numerical techniques designed to solve problems of physical and engineering interest. Finite difference methods are covered for the three major classes of partial differential equations: parabolic, elliptic, and hyperbolic. Practical implementation will be discussed. The student is also introduced to the important packages of scientific software algorithms. AMS 528 may be taken whether or not the student has completed AMS 526 or AMS 527.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

AMS 530: Principles in Parallel Computing

This course is designed for both academic and industrial scientists interested in parallel computing and its applications to large-scale scientific and engineering problems. It focuses on the three main issues in parallel computing: analysis of parallel hardware and software systems, design and implementation of parallel algorithms, and applications of parallel computing to selected problems.
in physical science and engineering. The course emphasizes hands-on practice and understanding of algorithmic concepts of parallel computing.

**Prerequisite:** A course in basic computer science such as operating systems or architectures or some programming experience.

**Spring, 3 credits, Letter graded (A, A-, B+, etc.)**

**AMS 532: Laboratory Rotations and Journal Club in Computational Biology**

This is a two semester course in which students spend at least 8 weeks in each of three different laboratories actively participating in the research of participating Computational Biology faculty. Participants will attend and give research talks at weekly Journal Club during the rotations. An overall grade is assigned and an evaluation form is completed by the supervising faculty member and provided to the student for constructive feedback.

**S/U grading**

**May be repeated for credit.**

**AMS 533: Numerical Methods and Algorithms in Computational Biology**

An in-depth survey of many of the key techniques used in diverse aspects of computational biology. A major focus of this class is on how to successfully formulate a statement of the problem to be solved, and how that formulation can guide in selecting the most suitable computational approach. Examples will be drawn from a wide range of problems in biology, including molecular modeling, biochemical reaction networks, microscopy and systems biology. No prior knowledge of biology is required.

**3 credits, Letter graded (A, A-, B+, etc.)**

**AMS 535: Introduction to Computational Structural Biology and Drug Design**

This course will provide an introduction to Computational Structural Biology with application to Drug Design. Methods and applications that use computation to model biological systems involved in human disease will be emphasized. The course aims to foster collaborative learning and will consist of presentations by the instructor, guest lecturers, and by course participants with the goal of summarizing key methods, topics and papers relevant to Computational Structural Biology. Offered Fall semester. This course is offered as both CHE 535 and AMS 535.

**0-3 credits, Letter graded (A, A-, B+, etc.)**

**May be repeated for credit.**

**AMS 536: Molecular Modeling of Biological Molecules**

This course is designed for students who wish to gain hands on experience modeling biological molecules at the atomic level. In conjunction with the individual interests, Molecular Mechanics, Molecular dynamics, Monte Carlo, Docking (virtual screening), or Quantum Mechanics software packages can be used to study relevant biological systems(s). Projects will include setup, execution, and analysis. Course participants will give literature presentations relevant to the simulations being performed and a final project report will be required. Familiarity with Unix (Linux) is desirable.

**Spring, 0-3 credits, Letter graded (A, A-, B+, etc.)**

**May be repeated for credit.**

**AMS 537: Dynamical Models of Gene Regulation and Biological Pattern Formation**

This is a graduate course in the fundamental theory of genetic function and biological pattern formation in animal development. The course covers dynamical (sometimes called "physiological") models of these processes at a variety of mathematical levels. Biologically, the emphasis will be on E. coli and the fruit fly Drosophila, with a careful discussion of key experimental results for nonspecialists. We will study the use of both deterministic and stochastic differential equations to solve fundamental scientific problems such as the phage lambda lysis/lysogeny decision, the engineering of artificial gene circuits, and the determination and regulation of the morphogenetic field in animal development, particularly the segmentation field in Drosophila.

**3 credits, Letter graded (A, A-, B+, etc.)**

**AMS 538: Methods in Neuronal Modeling**

Presentation of the mathematical modeling approach to information processing in nervous systems, from the level of individual ionic channels to large-scale neuronal networks. The course covers kinetic models of synaptic transmission, cable theory and compartment models for neurons, multiple channels and calcium dynamics, spike-train analysis and modeling small neuron networks.

**3 credits, Letter graded (A, A-, B+, etc.)**

**May be repeated for credit.**

**AMS 540: Linear Programming**

**3 credits, Letter graded (A, A-, B+, etc.)**

**AMS 542: Analysis of Algorithms**

Techniques for designing efficient algorithms, including choice of data structures, recursion, branch and bound, divide and conquer, and dynamic programming. Complexity analysis of searching, sorting, matrix multiplication, and graph algorithms. Standard NP-complete problems and polynomial transformation techniques. This course is offered as both AMS 542 and CSE 548.

**Prerequisite for CSE 548: CSE 373 recommended**

**Spring, 3 credits, Letter graded (A, A-, B+, etc.)**

**AMS 544: Discrete and Nonlinear Optimization**

Theoretical and computational properties of discrete and nonlinear optimization problems: integer programming, including cutting plane and branch and bound algorithms, necessary and sufficient conditions for optimality of nonlinear programs, and performance of selected nonlinear programming algorithms.

**3 credits, Letter graded (A, A-, B+, etc.)**

**AMS 545: Computational Geometry**

Study of the fundamental algorithmic problems associated with geometric computations, including convex hulls, Voronoi diagrams, triangulation, intersection, range queries, visibility, arrangements, and motion planning for robotics. Algorithmic methods include plane sweep, incremental insertion, randomization, divide-and-conquer, etc. This course is offered as both AMS 545 and CSE 555.

**Prerequisite for CSE 555: CSE 373 or CSE 548**

**Spring, 3 credits, Letter graded (A, A-, B+, etc.)**

**AMS 546: Network Flows**

Theory of flows in capacity-constrained networks. Topics include maximum flow, feasibility criteria, scheduling problems, matching and covering problems, minimum-length paths, minimum-cost flows, and associated combinatorial problems.

**Prerequisite: AMS 540 or permission of instructor**

**Spring, 3 credits, Letter graded (A, A-, B+, etc.)**

**AMS 547: Discrete Mathematics**
This course introduces such mathematical tools as summations, number theory, binomial coefficients, generating functions, recurrence relations, discrete probability, asymptotics, combinatorics, and graph theory for use in algorithmic and combinatorial analysis. This course is offered as both CSE 547 and AMS 547.

Prerequisite for CSE 547: AMS 301
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

AMS 550: Operations Research: Stochastic Models
Includes Poisson processes, renewal theory, discrete-time and continuous-time Markov processes, Brownian motion, applications to queues, statistics, and other problems of engineering and social sciences.

 AMS 550: Operations Research: Stochastic Models
3 credits, Letter graded (A, A-, B+, etc.)

AMS 552: Game Theory I
Elements of cooperative and noncooperative games. Matrix games, pure and mixed strategies, and equilibria. Solution concepts such as core, stable sets, and bargaining sets. Voting games, and the Shapley and Banzhaff power indices. This course is offered as both ECO 604 and AMS 552.

AMS 552: Game Theory I
3 credits, Letter graded (A, A-, B+, etc.)

AMS 553: Simulation and Modeling
A comprehensive course in formulation, implementation, and application of simulation models. Topics include data structures, simulation languages, statistical analysis, pseudo-random number generation, and design of simulation experiments. Students apply simulation modeling methods to problems of their own design. This course is offered as CSE 529, AMS 553 and MBA 553.

AMS 553: Simulation and Modeling
3 credits, Letter graded (A, A-, B+, etc.)

AMS 554: Queuing Theory

AMS 554: Queuing Theory
Prerequisite: AMS 507
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

AMS 555: Game Theory II
Refinements of strategic equilibrium, games with incomplete information, repeated games with and without complete information, and stochastic games. The Shapley value of games with many players, and NTU-values. This course is offered as both ECO 605 and AMS 555.

AMS 555: Game Theory II
Prerequisite for AMS 555: AMS 552/ECO 604.
Spring, 0-3 credits, Letter graded (A, A-, B+, etc.)

AMS 556: Dynamic Programming

AMS 556: Dynamic Programming
3 credits, Letter graded (A, A-, B+, etc.)

AMS 562: Numerical Hydrology
Numerical solution methods for the equations of incompressible flow in porous media with special emphasis on groundwater flow. Finite difference and finite element methods for steady-state and transient flows-boundary conditions, range of validity and stability of the numerical schemes, and numerical artifacts. The approach is hands on, with example problems being computed. This course is offered as both GEO 564 and AMS 562.

AMS 562: Numerical Hydrology
3 credits, Letter graded (A, A-, B+, etc.)

AMS 565: Wave Propagation

AMS 565: Wave Propagation
3 credits, Letter graded (A, A-, B+, etc.)

AMS 566: Compressible Fluid Dynamics
Physical, mathematical, and computational description in compressible fluid flows. Integral and differential forms of the conservation equations, one-dimensional flow, shocks and expansion waves in two and three dimensions, quasi-one-dimensional flow, transient flow, numerical methods for steady supersonic flow, numerical methods for transient flow.

AMS 566: Compressible Fluid Dynamics
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

AMS 569: Probability Theory I

AMS 569: Probability Theory I
3 credits, Letter graded (A, A-, B+, etc.)

AMS 570: Introduction to Mathematical Statistics
Probability and distributions; multivariate distributions; distributions of functions of random variables; sampling distributions; limiting distributions; point estimation; confidence intervals; sufficient statistics; Bayesian estimation; maximum likelihood estimation; statistical tests.

AMS 570: Introduction to Mathematical Statistics
3 credits, Letter graded (A, A-, B+, etc.)

AMS 571: Mathematical Statistics
Sampling distribution; convergence concepts; classes of statistical models; sufficient statistics; likelihood principle; point estimation; Bayes estimators; consistence; Neyman-Pearson Lemma; UMP tests; UMPU tests; Likelihood ratio tests; large sample theory. Offered as HPH 697 or AMS 571.

AMS 571: Mathematical Statistics
3 credits, Letter graded (A, A-, B+, etc.)

AMS 572: Data Analysis I
Introduction to basic statistical procedures. Survey of elementary statistical procedures such as the t-test and chi-square test. Procedures to verify that assumptions are satisfied. Extensions of simple procedures to more complex situations and introduction to one-way analysis of variance. Basic exploratory data analysis procedures (stem and leaf plots, straightening regression lines, and techniques to establish equal variance). Offered as AMS 572 or HPH 698.

AMS 572: Data Analysis I
Prerequisite:AMS 312 or permission of instructor
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

AMS 573: Design and Analysis of Categorical Data
Measuring the strength of association between pairs of categorical variables. Methods for evaluating classification procedures and inter-rater agreement. Analysis of the associations among three or more categorical variables using log linear models. Logistic regression.

AMS 573: Design and Analysis of Categorical Data
Prerequisite: AMS 572
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

AMS 575: Internship in Statistical Consulting
Directed quantitative research problem in conjunction with currently existing research programs outside the department. Students specializing in a particular area work on a problem from that area; others work on problems related to their interests, if possible.
Efficient and effective use of computers. Each student gives at least one informal lecture to his or her colleagues on a research problem and its statistical aspects.

3-4 credits, Letter graded (A, A-, B+, etc.)

AMS 577: Multivariate Analysis

3 credits, Letter graded (A, A-, B+, etc.)

AMS 578: Regression Theory

3 credits, Letter graded (A, A-, B+, etc.)

AMS 581: Analysis of Variance
Analysis of models with fixed effects. The Gauss-Markov theorem; construction of confidence ellipsoids and tests with Gaussian observations. Problems of multiple tests of hypotheses. One-way, two-way, and higher-way layouts. Analysis of incomplete designs such as Latin squares and incomplete blocks. Analysis of covariance problems.

3 credits, Letter graded (A, A-, B+, etc.)

AMS 582: Design of Experiments
Discussion of the accuracy of experiments, partitioning sums of squares, randomized designs, factorial experiments, Latin squares, confounding and fractional replication, response surface experiments, and incomplete block designs. Offered as AMS 582 or HPH 699.

3 credits, Letter graded (A, A-, B+, etc.)

AMS 586: Time Series

3 credits, Letter graded (A, A-, B+, etc.)

AMS 587: Nonparametric Statistics
This course covers the applied nonparametric statistical procedures: one-sample Wilcoxon tests, two-sample Wilcoxon tests, runs test, Kruskal-Wallis test, Kendall’s tau, Spearman’s rho, Hodges-Lehman estimation, Friedman analysis of variance on ranks. The course gives the theoretical underpinnings to these procedures, showing how existing techniques may be extended and new techniques developed. An excursion into the new problems of multivariate nonparametric inference is made.

Prerequisites: AMS 512 and AMS 572 or equivalents
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

AMS 588: Biostatistics
Statistical techniques for planning and analyzing medical studies. Planning and conducting clinical trials and retrospective and prospective epidemiological studies. Analysis of survival times including singly censored and doubly censored data. Quantitative and quantal bioassays, two-stage assays, routine bioassays. Quality control for medical studies.

Prerequisite: AMS 572 or permission of instructor
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

AMS 589: Quantitative Genetics
Definition of relevant terminology. Statistical and genetic models for inheritance of quantitative traits. Estimation of effects of selection, dominance polygenes, epistasis, and environment. Linkage studies and threshold characteristics.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

AMS 591: Topics for M.S. Students
Various topics of current interest in applied mathematics will be offered if sufficient interest is shown. Several topics may be taught concurrently in different sections.

3 credits, Letter graded (A, A-, B+, etc.)

May be repeated for credit.

AMS 592: Mathematical Methods of Finance and Investments I
A broad-based course in mathematical modeling and quantitative analysis of financial transactions and investment management issues such as debt and equity, measures of risk and returns, efficient markets and efficient set mathematics, asset pricing, one-factor and multiple-factor models, portfolio selection, futures and options.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

AMS 593: Financial Mathematics
Accumulation functions, yield rates, annuities, loan repayment, term structure of interest rates/spot rates/forward rates, options, duration/convexity. This course follows the syllabus for Financial Mathematics (FM) Exam of the Society of Actuaries and prepares students to pass the FM Exam.

Offered Fall and Summer, 3 credits, Letter graded (A, A-, B+, etc.)

AMS 594: Mathematical Methods of Finance and Investments II
This course employs the techniques of mathematical statistics and empirical finance, e.g., estimation theory, linear and nonlinear regression, time series analysis, modeling and simulation to examine critically various models of prediction for asset-pricing, pricing of derivative products and term-structure of interest rates assuming stochastic volatility. Statistics necessary for analysis is incorporated in the course.

Prerequisite: AMS 592
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

AMS 595: Fundamentals of Computing
Introduction to UNIX operating system, C language, graphics, and parallel supercomputing.

Fall, 1 credit, Letter graded (A, A-, B+, etc.)

AMS 596: Fundamentals of Large-Scale Computing
Overview of the design and maintenance of large scale computer projects in applied mathematics, including basic programming techniques for massively parallel supercomputers.

Prerequisite: AMS 595 or permission of instructor
Spring, 1 credit, Letter graded (A, A-, B+, etc.)

AMS 597: Statistical Computing
Introduction to statistical computing using SAS and S plus.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

AMS 599: Research
May be repeated for credit.

AMS 605: Probability Theory II

3 credits, Letter graded (A, A-, B+, etc.)

AMS 621: Finite Element Methods for Partial Differential Equations
Variational form of the problem, Ritz Galerkins, collocation, and mixed methods; triangular, rectangular (2-D), and tetrahedral
AMS 641: Special Topics in Mathematical Programming
The course is designed for second- and third-year graduate students with a strong foundation in linear algebra and analysis who wish to pursue research in applied mathematics. Varying topics from nonlinear programming and optimization to applied graph theory and applied combinatorics may be offered concurrently.

3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

AMS 644: Special Topics in Applied Probability
The course is designed for second- and third-year graduate students with a strong background in probability and stochastic modeling who wish to pursue research in applications of the probability theory. Several topics may be taught concurrently in different sections.
Prerequisites: AMS 550 and permission of instructor
Fall, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

AMS 651: Nonlinear Analysis and Optimization

3 credits, Letter graded (A, A-, B+, etc.)

AMS 652: Special Topics in Game Theory
The course is designed for second- and third-year graduate students who wish to specialize in the mathematical theory of games.

3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

AMS 670: Special Topics in Probability and Mathematical Statistics
The course is designed for second- and third-year graduate students with a strong foundation in probability and statistics who wish to pursue research in mathematical statistics.
Several topics may be taught concurrently in different sections.

3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

AMS 675: Special Topics in Applied Statistics
The course is designed for second- and third-year students with a strong foundation in statistical analysis who wish to pursue research in applied statistics.

3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

AMS 676: Internship in Applied Mathematics
Directed research and/or practical experience in industry, financial and consulting firms, and research institutions. Students are required to have a department faculty adviser who coordinates and supervises the internship. Submission of the final report is required.

0-9 credits, S/U grading

AMS 683: Biological Physics & Biophysical Chemistry: Theoretical Perspectives
This course will survey a selected number of topics in biological physics and biophysical chemistry. The emphasis is on the understanding of physical organization principles and fundamental mechanisms involved in the biological process. The potential topics include: Protein Folding, Protein Dynamics, Biomolecular Interactions and Recognition, Electron and Proton Transfer, Motors, Membranes, Single Molecules and Single Cells, Cellular Networks, Development and Differentiation, Brains and Neural Systems, Evolution. There will be no homework or exams. The grades will be based on the performance of the term projects. Crosslisted with PHY 680 and CHE 683.

0-3 credits, Letter graded (A, A-, B+, etc.)

AMS 690: Special Topics in Differential Equations and Applied Analysis
The course is designed for second- and third-year graduate students with a strong foundation in analysis who wish to pursue research in applied mathematics. Several topics may be taught concurrently in different sections.

3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

AMS 691: Topics in Applied Mathematics
Varying topics selected from the list below if sufficient interest is shown. Several topics may be taught concurrently in different sections.

1-3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

AMS 695: Special Topics in Numerical Analysis and Scientific Computing
Analysis and Scientific Computing
3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

AMS 696: Applied Mathematics Seminar
0-3 Credits, S/U Grading, May be repeated for credit.
0-3 credits, S/U grading
May be repeated for credit.

AMS 699: Practicum in Teaching
May be repeated for credit.

AMS 699: Dissertation Research on Campus
Prerequisite: Must be advanced to candidacy (G5). Major portion of research must take place on SBU campus, at Cold Spring Harbor, or at the Brookhaven National Lab.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

AMS 700: Dissertation Research off Campus - Domestic
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place off-campus, but in the United States and/or U.S. provinces. Please note, Brookhaven National Labs and the Cold Spring Harbor Lab are considered on-campus. All international students must enroll in one of the graduate student insurance plans and should be advised by an International Advisor.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

AMS 701: Dissertation Research off Campus - International
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place outside of the United States and/or U.S. provinces. Domestic students have the option of the health plan and may also enroll in MEDEX. International students who are in their home country are not covered by mandatory health plan and must contact the Insurance Office for the insurance charge to be removed. International students who are not in their home country are charged for the mandatory health insurance. If they are to be covered by another insurance plan they must file a waiver be second week of classes. The charge will only be removed if other plan is deemed comparable.
ANT 500: Social and Cultural Anthropology
Study of the forms of social organizations: family, kinship, economic, political, and religious, as found among simple and complex societies. A basic graduate-level course designed for students whose previous background is in other fields.
Fall, 3 credits, Letter graded (A-, B+, etc.) May be repeated for credit.

ANT 501: Development of Anthropological Theory
Survey of the development of anthropological theory from the 19th century to the present. This course is offered as both ANT 501 and DPA 501.
Spring, 4 credits, Letter graded (A, A-, B+, etc.)

ANT 502: Social Ecology
This course explores theoretical and methodological issues in the study of human social activity and its relationship to ecological systems and the environment. Readings include both classic studies as well as contemporary research, with particular emphasis placed on the various dimensions and scales of social organization and activity, and on the role of cultural, religious, and political institutions in shaping ecological relationship as well as economic behavior.
3 credits, Letter graded (A, A-, B+, etc.)

ANT 503: Social Organization
This course explores theoretical models and empirical observations of human social organization in a comparative perspective, including such topics as demography and behavioral ecology, kinship and marriage, reciprocal exchange, and political dimensions of resource mobilization in small-scale as well as complex societies. Organized around different layers of human sociality, the course examines social dependence among humans and nonhuman primates, evolutionary explanations for human mating strategies, cooperation in child-rearing, paradigms of descent and affinity, and the dynamics of hierarchy and alliance in egalitarian cultures as well as stratified states.
3 credits, Letter graded (A, A-, B+, etc.)

ANT 509: Seminar in European Ethnography
Investigation and discussion of selected topics and problems concerning European societies and cultures. The perspectives of culture history and current fieldwork are employed. This course is offered as both ANT 509 and DPA 509.
Fall, 3 credits, S/U grading May be repeated for credit.

ANT 511: Paleolithic Archaeology
A survey of the archaeological record of foraging peoples in Africa, Europe, and Asia prior to the emergence of agriculture. The course emphasizes particular problems including the relationship between behavioral and biological change, different adaptive strategies in temperate and tropical zones, the origins of modern humans, and the emergence of complex hunter-gatherer societies. This course is offered as both ANT 511 and DPA 511.
Prerequisite: Any other archaeology course.
Fall, 4 credits, Letter graded (A, A-, B+, etc.)

ANT 512: Comparative Civilizations
A comparative study of the processes of sociocultural evolution from the beginnings of sedentary life to the achievement of early civilization in the Near East, Egypt, the Indus Valley, China, Mesoamerica, and the Andean area. The seminar covers such topics as urbanization, demography, irrigation, craft specialization, militarism, and trade and exchange. This course is offered as both ANT 512 and DPA 512.
Prerequisite: Graduate standing or permission of instructor
Spring, 4 credits, Letter graded (A, A-, B+, etc.)

ANT 513: Origins of Agriculture
This course will trace the history of anthropological thought on the origins of agriculture and will assess the evidence from the Old and New worlds for this economic revolution. The course will not only explore areas where early agriculture is evidenced, but will also contrast these areas with those where agriculture was a later development. Emphasis will be on the environmental, technological, biological, social, and cultural processes associated with the "Neolithic Revolution."

ANT 516: Research Design in Archaeology
This course is offered as both ANT 516 and DPA 516.
Fall, 4 credits, Letter graded (A, A-, B+, etc.)

ANT 517: Primitive Technology
An introduction to the technology of hunter-gatherers. The course examines how archaeologists use both ethnographic and experimentation to shed light on prehistoric human technological adaptations. Techniques for making and using primitive tools are practiced in weekly laboratory sessions.
Fall, 4 credits, Letter graded (A, A-, B+, etc.) May be repeated for credit.

ANT 518: Lithic Technology
A detailed overview of the methods archaeologists use to extract behavioral information from prehistoric stone tools. The course examines raw material economy, technological strategies, tool use, and discard behavior. Analytical methods are practiced through the computer-assisted analysis of stone tools from simulated archaeological sites.
Spring, 4 credits, Letter graded (A, A-, B+, etc.)

ANT 519: Archaeozoology
An introduction to the study of animal bones from archaeological sites. Special emphasis is on identification of fragmented bone, identification of bone surface modification, calculation of indexes of abundance, and measurement and metrical analysis of mammal
bone. Computer analysis is stressed, and the class seeks to synthesize traditional archaeo-
zoology and actualistic studies. This course is offered as both ANT 519 and DPA 519.

Fall, 4 credits, Letter graded (A, A-, B+, etc.)

**ANT 520: Principles of Social and Cultural Anthropology**

Concepts and principles of social and cultural anthropology; historical background; structure
and function, social processes, transactions, culture, communication, continuity, and other
change; topics and problems of contemporary interest. Some ethnographic monographs are
discussed in terms of their relevance to the general concepts and principles treated in the
seminar. This course is offered as both ANT 520 and DPA 520.

Fall, 4 credits, Letter graded (A, A-, B+, etc.)

**ANT 526: The Use of Remote Sensing and GIS in Environmental Analysis**

An introduction to the use of aerial and satellite imagery in environmental analysis and
the manipulation of geographic data sets of all types using Geographic Information Systems.
This course is designed to teach students in archaeology, physical anthropology, and
related disciplines how satellite imagery combined with various maps can be manipulated using GIS software to perform powerful geographic analysis. Although students are eventually likely to use these tools in many different parts of the world, this course focuses on Long Island as a research area, and each student designs and completes a research project on a particular section of the area, focusing on the habitats of local wildlife, the locations of archaeological sites, coastal regimes, etc. This course presumes computer literacy and familiarity with database management. Offered as ANT 526 and DPA 526 or HPH 658.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

**ANT 527: Field Methods and Techniques in Archaeology**

The course will be held during the summer only. It consists of field and laboratory work on
an aspect of Long Island’s archaeological heritage. Students’ time is divided between
surveying and excavation in the field and artifact analysis in the laboratory. Such
techniques as map and air photo reading, survey, instruments, stratigraphy, conservation,
typology construction, etc. are taught. Students are exposed to the full range of
class views as well as the more traditional economic view. These agricultural peoples, who are
essentially proletarian and preindustrial, are described and analyzed especially in relation
to the national societies of which they form a

Fall, 4 credits, Letter graded (A, A-, B+, etc.)

**Prerequisite: Graduate standing or permission of instructor**

**Summer, 3-9 credits, Letter graded (A, A-, B+, etc.)**

**ANT 540: Readings in Ethnography and Ethnology**

A survey of the more important and better
documented cultures and societies of selected
world ethnographic areas and the implications
of data from these for current approaches and
problems in ethnology. This course is offered
as both ANT 540 and DPA 540.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

May be repeated for credit.

**ANT 550: Theory and Methodology in Primatology**

Comprehensive overview of the theory and
methodology used in the study of primate
behavioral ecology. Includes ecological field
methods, behavioral observations, analytical
techniques, nonparametric statistics as well as
planning, presenting, and reviewing research.
Offered as both ANT 550 and DPA 550.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**ANT 559: Archaeology of Food**

Explores the archaeological study of food
and foodways. The emphasis is on the social
aspects of food, particularly its role in
past power structures, social relationships,
conceptions of identity, ritual practices, and
gender roles. Also covers the theoretical and
methodological approaches archaeologists use
to study food in the past.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**ANT 560: Ancient Mesopotamia**

An examination of the cultural history of
Mesopotamia based on the archaeological,
textual and art historical record. Focusing on
the fourth through second millennia, this course
investigates both the long term developmental
process of this civilization, and ways to
understand its settlement systems, urban
structure, social and political organization,
economic structure and the role played by
religion.

Fall, 4 credits, Letter graded (A, A-, B+, etc.)

**Ant 567: Peasant Societies and Cultures**

The concept of peasantry is examined from
political, religious, and social class viewpoints
as well as from the more traditional economic
view. These agricultural peoples, who are
essentially proletarian and preindustrial, are
described and analyzed especially in relation
to the national societies of which they form a
part. This course is offered as both ANT 561
and DPA 561.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

**ANT 562: Long Island Archaeology**

Life on Long Island and the surrounding
area from its first settlement by Native
Americans 12,000 years ago until the end of
the nineteenth century. Trends and changes in
human behavior are studied in the context of
environmental and cultural processes affecting
all of northeastern North America.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

**ANT 564: Primate Evolution**

The taxonomic relationships and evolutionary
history of primates as documented by their
fossil record and structural and chemical
evidence. Emphasis on primates prior to the
origin of the human lineage. This course is
offered as ANT 564, DPA 564 and HBA 564.

Spring, 4 credits, Letter graded (A, A-, B+, etc.)

**ANT 565: Human Evolution**

A survey of the fossil record of hominid
evolution through the Pliocene and Pleistocene
with emphasis on the morphological structure
and function of locomotor, masticatory,
and neutral systems. Includes utilization of
comparative anatomical material and extensive
cast and slide collections. This course is
offered as ANT 565, DPA 565 and HBA 565.

Fall, 4 credits, Letter graded (A, A-, B+, etc.)

**ANT 567: Primate Behavior and Ecology**

A comparative approach to the behavior
and ecology of living lemurs, monkeys, and
apes. Emphasis is placed on sociobiological
theory; life history strategies; morphological
adaptations; comparisons of primate
communities in Asia, Africa, Madagascar, and
South America; and primate conservation. This
course is offered as both ANT 567 and DPA 567.

Fall, 4 credits, Letter graded (A, A-, B+, etc.)

**ANT 568: Hunters and Gatherers**

The course focuses on the relationship between
ecology and adaptation to explore the cross-
cultural diversity of hunter/gatherers. The
first part of the course looks at a number of
key theoretical issues and debates that surround
the study of hunter/gatherers. Once this
foundation is laid, students learn about modern
and historic hunter-gatherers from all the
major geographic regions of the world. This
overview draws on studies from behavioral
ecology, ethnoarchaeology and cultural anthropology. The focus of the course is both to explore hunter/gatherer variation in relationship to their environment, and to give students an appreciation of the ways in which hunter-gatherers have been historically documented. The course is designed to be applicable to archaeologists, anthropologists and to those in other disciplines who make inferences about past ways of life.

*Spring, 3-4 credits, Letter graded (A, A-, B+, etc.)*

**ANT 573: Archaeology of Human Dispersals**
A survey of the archaeological evidence for the dispersal of Homo sapiens during the Late Pleistocene epoch (128,000-130,000 years ago). Topics include African origin of Homo sapiens, dispersals into Eurasia, Australia, and the Americas, large mammal extinctions, origins of art, music, and symbolic behavior, emergence of hunter-gatherers.

*Offered Fall, 3 credits, Letter graded (A, A-, B+, etc.)*

**ANT 583: Human Demography**
The study of human demography has had a long standing focus in anthropology, archaeology, economics and sociology for the simple reason that the distribution and density of people fundamentally shapes many other aspects of the human condition. Human Demography gives students an overview of population dynamics both as they change through time and differ across cultures. The course starts with outlining the history of population studies. Following this introduction, the three major components of population change - fertility, mortality and migration - are explored in depth. We then survey the seminal transitions in human demographic history from hunting and gathering to domestication and through modern postindustrial times. Drawing from the ethnographic, human ecology, demographic and archaeological literature, students read and discuss human demography from a variety of perspectives. The course includes some simple computations and a lab.

*Spring, 3-4 credits, Letter graded (A, A-, B+, etc.)*

**ANT 585: Prehistoric Peoples of the Americas**
ANT 585 Prehistoric Peoples of the Americas Life in the Americas from the first settlement at the end of the Ice Age until the arrival of the Europeans in the 15th and 16th centuries. The culture, history, and evolution of prehistoric peoples of North, Central, and South America are treated. Specific topics covered include settlement by North Americans, hunting-gathering lifeways, plant and animal domestication, the origins of village life, and state-level societies.

*Spring, 3 credits, Letter graded (A, A-, B+, etc.)*

**ANT 599: M.A. Thesis Research**

*Fall, 0-6 credits, S/U grading May be repeated for credit.*

**ANT 602: Research Seminar in Anthropological Theory**
This course is offered as both ANT 602 and DPA 602.

*Fall and Spring, 0-12 credits, S/U grading May be repeated for credit.*

**ANT 610: Individual Research**
Research supervised by faculty. Students must have permission of instructor and enroll in appropriate section. This course is offered as both ANT 610 and DPA 610.

*Fall and Spring, 1-12 credits, S/U grading May be repeated for credit.*

**ANT 620: Research Seminar in Topical Problems**
This course is offered as both ANT 620 and DPA 620.

*Fall and Spring, 3 credits, S/U grading May be repeated for credit.*

**ANT 630: Research Seminar in Physical Anthropology**
This course is offered as both ANT 630 and DPA 630.

*Fall and Spring, 3 credits, S/U grading May be repeated for credit.*

**ANT 640: Research Seminar in Ethnography and Ethnology**
This course is offered as both ANT 640 and DPA 640.

*Fall and Spring, 1-3 credits, S/U grading May be repeated for credit.*

**ANT 650: Research Seminar in Archaeology**

**ANT 680: Special Seminar**
Selected topics in cultural and social anthropology. Topics reflect current interests of faculty and graduate students. This course is offered as both ANT 680 and DPA 680.

*Fall and Spring, 1-3 credits, S/U grading*

**ANT 800: Summer Research**
This course is offered as both ANT 800 and DPA 800.

*S/U grading May be repeated for credit.*

---

**ARH**

**ARH 501: Criticism, Theory, Practice: From Artes Mechanicae to Artes Liberales**
An introduction to the history of art criticism and theory from Greek and Roman antiquity through the High Renaissance. The writings of artists, historians, theologians, philosophers, and theorists will be considered not as abstract and independent concepts but in relation to artistic practice. Changing aesthetic values, whether expressed verbally, or in patronage acts, will be explored. Attention will be given to such theoretical concerns as the paragone, the discenzo-colorito debate, the nature of artistic creation, and aesthetic values reflected in basic principles regarding form, color, composition, etc. In addition, we shall investigate the particular strategies, if any, employed by artists over the centuries to elevate their social, economic and intellectual status, in short, to promote the shift from simple craftsmen to divine genius.

*Spring, 3 credits, Letter graded (A, A-, B+, etc.)*

*May be repeated for credit.*

**ARH 502: History of 19th-Century Art Criticism and Theory**
A study of European art criticism and theory of the 19th century stressing relationships between art and the history of ideas. Readings concentrate on primary sources, including reviews of art exhibitions (Diderot, Stendhal, Zola), artists’ letters (Constable, Delacroix, the Impressionists), and treatises relating to art (Winckelmann, Proudhon, Ruskin). Special emphasis is given to Baudelaire. Comparisons are made between ways of seeing art as well as between critical and theoretical attitudes to artists’ intentions.

*Fall, 3 credits, Letter graded (A, A-, B+, etc.)*

**ARH 503: History of 20th-Century Art Criticism and Theory**
The literature of art has expanded enormously in the 20th century-far beyond attempts to organize it developmentally or conceptually. An attempt is made to define types of criticism both in relation to the critics and their relation to the support system for the arts of which they are part.
ARH 540: Methodologies of Art History
This graduate seminar is designed to engage students with the history and methods of the discipline of art history. Through close readings and focused discussions, the course examines issues raised by aesthetics, the problems of biography and periodization, and the role of canon formation. Particular focus is directed towards the interpretive tools that have developed from within the discipline of art. In addition, also stressed is the interdisciplinary nature of art history through readings that discuss how lines of thought and critical inquiry emerging within other disciplines have had enormous influence on art history and criticism in the last two decades: semiotics, feminist theory, psychoanalysis, anthropology and post colonial theory, cultural studies, theories of mass culture and the post-modern, and the current debates about visual culture.
3 credits, Letter graded (A, A-, B+, etc.)

ARH 541: Topics in Ancient Art
This course deals with a variety of topics related to ancient art and its influence on later European art and artistic theory. Areas explored include ancient art history, aesthetics, and comparative criticism; Roman uses of Greek art; pagan imagery in early Christian and medieval art; antique art and the Renaissance (use of prototypes); collecting antiquities (from the Medici to Getty); archaeological exploration and publication in the 18th and 19th centuries; French neoclassicism; and the calligraphy of Greek vases (Hamilton, Blake, Flaxman, Ingres, Picasso).
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

ARH 542: Topics in Medieval Art
A topic in medieval art or architecture, such as early medieval manuscript illumination, ornament and design, or the Gothic cathedral, is selected and explored during the semester in lectures, discussions, and student reports or papers.
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

ARH 543: Topics in Renaissance Art
This course, usually a seminar, deals with one or several of the following aspects of Renaissance art: iconographic problems, style and connoisseurship (including the study of individual works at the Metropolitan Museum or the Frick), patronage and its effect on the form and content of a work, the exchange of artistic ideas between northern and southern Europe, and Renaissance sources in antiquity and the Middle Ages.
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

ARH 544: Topics in Early Modern Art
This course examines methodological developments and historical issues related to the art and visual culture of the early modern period. Though we are concerned with objects, discourses, and practices emerging in the seventeenth century, we also approach these through the perspective of contemporary critical tools (for example, theories of urban space, spectacle, and representation; psychoanalysis, sexuality and subjectivity; coloniality and the encounter with New world otherness; semiotics and the construction of absolutist power). Students are encouraged to engage with these issues through the study of traditional high art objects as well as through other forms of representation emerging in the early modern period—for example, scientific illustration, more ephemeral forms of print culture, and even urban and courtly spectacle.
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

ARH 545: Topics in 19th-Century Art
Selected topics in 19th-century art with an emphasis on interdisciplinary approaches to interpretation. Possible topics include politics and art during the French Revolution; English landscape painting and the theory of the picturesque; and French realism and mid-19th-century social thought.
This course is co-scheduled with ARH 400 for Spring 2012.
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

ARH 546: Topics in 20th-Century Art
Twentieth-century art considered as an international movement, European and American, although national groups may be studied. Emphasis varies with topics ranging over stylistic analysis, iconographical interpretations, and theoretical studies. Students are expected to undertake original research and interpretation.
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

ARH 547: Topics in Global, Colonial, and Diasporic Art
This course examines various issues in the appreciation, interpretation and appropriation of non-Western art. Emphasis is on developing a critical approach to these arts and the manner in which they have been represented and misrepresented in the Western imagination. Topics vary, but may include exploration of themes in the so-called traditional arts of Africa, Oceania, Native and Latin America, the transformations of these arts during the colonial period, issues of identity and the consequences of dislocation versus sense of place in the diaspora, and contemporary expressions of non-Western artists on the global scene.
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

ARH 548: Museum Studies
Through a combination of field trips, visiting lecturers, group discussion, and student projects, the course surveys the diverse aspects of the museum field, including management, curatorship, exhibitions, public relations, conservation, and other areas of administration and professional practice.
3 credits, Letter graded (A, A-, B+,

ARH 549: Topics in American Visual Culture
This course examines selected issues in the history of American art and material culture. The course focuses upon, but is not necessarily limited to, the United States. Topics include public art and public culture; approaches to the study of material culture; art and commercial and/or popular culture; art and regional locations; realism; imaging the West; cross-cultural exchanges in art of the United States. (May be used to fulfill 20th-century requirement when material deals with 20th-century art.)
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

ARH 550: Inquiries into Art Criticism and Theory
This course deals with the theoretical approaches to the study of art that cross historical boundaries. Topics vary from semester to semester. They may be an expansion of one of the areas generally covered in ARH 540, such as psychology of art or the iconography of architecture. Other investigations may focus on subjects requiring a special methodological approach, such as the theory and history of ornament and design or the role of public art.
ARH 551: Topics in Performance
The histories and theories of performance are explored. Topics may be the performing body, performance and political action, avant-garde performance, performing and artifact, virtual performance, performance and identity. Depending on the topic, there may be a performance and/or computer based projects.
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

ARH 552: Topics in Contemporary Art
The course will examine the latest developments in visual art and architecture, beginning with the Neo-Expressionism and Neo-Conceptualism of the 1980s and extending to installation and video art. Postmodernist and activist art will be examined in particular detail, and contextualized in terms of the broader patterns of 20th century art.
3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

ARH 553: Contemporary Art in New York
A systematic survey of contemporary art on view in museums and galleries in New York. The class would alternate between gallery/museum visits and interpretative analyses of the work in the classroom. A variety of theoretical approaches will be used and the full range of contemporary pluralism will be examined. Contemporary art will be understood as both a manifestation of contemporary society and in terms of its larger art historical context and significance. The New York art scene is the richest in the world. The class offers the student the opportunity for direct, informed contact with it.
3 credits, Letter graded (A, A-, B+, etc.)

ARH 554: Topics in Visual Culture
This class examines issues in the interdisciplinary field of visual culture. Visual culture studies look at the dynamic state of visual media in contemporary life and their historical origins, seeking to relate art and film to the mass media and digital culture.
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

ARH 570: Issues in Architectural History and Criticism
This course examines a series of topics that link architecture with other critical disciplines. Among the topics that may be addressed are architectural theory and the theories of language; the history of proportion and the construction of gender; and Orientalism.
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

ARH 580: Art Criticism or Gallery Internship
An internship offering practical experience in some aspect of the field of art history and criticism, such as gallery and curatorial work in an on-campus or off-campus gallery or museum, or journalistic experience with an art or criticism publication such as the Art department journal Art Criticism.
Prerequisite: Good standing in the graduate art history and criticism program
Fall and Spring, 1-3 credits, S/U grading
May be repeated 2 times FOR credit.

ARH 590: Directed Readings for Doctoral Candidates
An independent reading course to be arranged with a particular faculty member. Normally, this course is reserved for advanced PhD. students who have fulfilled most of their course requirements and for whom the proposed program of study cannot be completed within other existing course structures.
Fall and Spring, 1-9 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

ARH 591: Practicum in the Writing of Art Criticism
This course is designed as a practicum in the writing of art criticism under the supervision of the faculty.
Fall and Spring, 3 credits, S/U grading
May be repeated 2 times FOR credit.

ARH 592: Practicum in Teaching
Instruction in the department under the supervision of the faculty. (This course may not be included more than once in the courses taken in fulfillment of the 36 credit hour requirement.)
Fall and Spring, 3 credits, S/U grading

ARH 593: Directed Readings in Art History, Criticism, and Theory
An independent reading course to be arranged with a particular faculty member. Normally, this course is reserved for second year Masters students who have fulfilled most of their course requirements and for whom the proposed program of study cannot be completed within other existing course structures.
Fall and Spring, 1-3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

ARH 598: Thesis
Prerequisite: Completion of all degree requirements
Fall, 1-6 credits, S/U grading
May be repeated for credit.

ARH 602: Teaching Practicum, Advanced
Instruction in the department by advanced graduate students under the supervision of faculty.
3 credits, S/U grading
May be repeated 2 times FOR credit.

ARH 690: Directed Readings on Campus
Prerequisite: Must be advanced to candidacy (G5). Major portion of research must take place on SBU campus, at Cold Spring Harbor, or at the Brookhaven National Lab.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

ARH 699: Dissertation Research on Campus - Domestic
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place off-campus, but in the United States and/or U.S. provinces. Please note, Brookhaven National Labs and the Cold Spring Harbor Lab are considered on-campus. All international students must enroll in one of the graduate student insurance plans and should be advised by an International Advisor.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

ARH 700: Dissertation Research off Campus - International
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place outside of the United States and/or U.S. provinces. Domestic students have the option of the health plan and may also enroll in MEDEX. International students who are in their home country are not covered by mandatory health plan and must contact the Insurance Office for the insurance charge to be removed. International students who are not in their home country are charged for the mandatory health insurance. If they are to be covered by another insurance plan they must file a waiver be second week of classes. The charge will only be removed if other plan is deemed comparable.
GRADUATE COURSE DESCRIPTIONS

Stony Brook University Graduate Bulletin: www.stonybrook.edu/gradbulletin

ARS 520: Special Projects for M.F.A. Candidates
Advanced projects in areas that may not be included in the M.F.A. curriculum, utilizing the unique talents of regular and visiting faculty, the facilities of the Art department, or other aspects of the university environment, and possibly facilities at other locations or institutions. Prerequisites: Faculty sponsor, permission of graduate studies director.
Fall, 1-9 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

ARS 525: Electronic Media
An exploration of the experimental artistic practices utilizing computer and electronic technologies: digital imaging, video and audio, web and CD-Rom production, and interactive installation. It will provide practical instruction in the use of computer media with an orientation towards relating this to the graduate student's own practice. It will also analyze the unique possibilities of this hybrid and developing art form through theoretical readings and examination of recent works, exhibitions, festivals, and the worldwide web.
Prerequisite: Accepted candidate for M.F.A. or permission of department
Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

ARS 530: Professional Experience Internship
Internship in the professional art world of New York City and its environs. Depending on the career objectives of the M.F.A. candidate, the student may choose to intern at a foundry, printmaking atelier, art gallery or museum, known artist's studio, or related facility or institution.
Prerequisite: Accepted candidate for M.F.A.
Fall, 1-3 credits, S/U grading
May be repeated 2 times FOR credit.

ARS 531: Graduate Teaching Practicum
Supervised teaching practicum in undergraduate studio or studio, theory course.
Prerequisite: Accepted candidate for M.F.A.
Fall and Spring, 1-3 credits, S/U grading
May be repeated 2 times FOR credit.

ARS 532: Thesis Project
Preparation of thesis under the program advisor.
Prerequisites: Accepted candidate for M.F.A., review board passed
Fall, 1-6 credits, S/U grading
May be repeated for credit.

ARS 535: Projects in Studio Art
Projects in studio art, field and media to be determined on a per semester basis by the individual instructor.
3 credits, Letter graded (A, A-, B+, etc.)
May be repeated 2 times FOR credit.

ARS 540: Graduate Photo Studio
Photographic studio, theory, and laboratory emphasizing individual development as a photographer. Color and black-and-white studios and darkrooms. Fine arts, reportage, illustration, commercial, and industrial.
Prerequisites: Demonstration of appropriate level of proficiency, permission of instructor.
Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

ARS 550: In Process Critique
Graduate theory and practice of art, investigating historical and contemporary concepts, concentrating on individual development as an artist. Conceptual, environmental and wide ranging solutions are encouraged. Required for first year MFA's, this course culminates in a body of work for the end of the year First Year Exhibition. The course also provides students with vigorous critical feedback throughout this process, augmenting it with readings and discussions of related New York City exhibitions in galleries and museums to inform the development of their work.
Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

ARS 551: Graduate Painting Studio
Studio and theory in painting and related visual forms, with instruction and facilities available in all media and techniques; emphasis on individual development as an artist. Models and space for environmental and conceptual works available.
Prerequisites: Permission of instructor; accepted candidate for M.F.A. or permission of department
Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

ARS 560: Graduate Sculpture Studio
Theory and practice of sculpture for the graduate student, with instruction and facilities available in all media and techniques; emphasis on individual development as an artist. Studio facilities include air, electric, and hydraulic power equipment; TIG, MIG, Arc, and flame welding; forging; woodworking; modeling, molding, and casting facilities for clay, wax, plaster, and plastics; and metal casting capabilities in investment, shell, sand, and centrifugal.
Prerequisites: Permission of instructor; accepted candidate for M.F.A. or permission of department
Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

ARS 561: Graduate Ceramics and/or Ceramic Sculpture Studio
Theory and practice of ceramics and ceramic sculpture for the graduate student with emphasis on individual development as an artist. Advanced studio instruction in building: coil, slab, pinch; wheelthrowing; casting, inclusive of multipiece plaster pour-molds; various firing techniques: reduction, oxidation, raku, and high- and low-fire glaze techniques.
Prerequisites: Permission of instructor; accepted candidate for M.F.A. or permission of department
Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

ARS 570: Graduate Printmaking Studio
Graduate studio in the theory and practice of printmaking. Color, black-and-white, and photographic processes in plate and stone lithography, serigraphy, relief, and intaglio, emphasizing the student's individual development as an artist.
Prerequisites: Permission of instructor; accepted candidate for M.F.A. or permission of department
Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

ARS 580: Visual Arts Seminar
Required seminar and critique throughout the M.F.A. curriculum. Guest speakers, artists, and critics; demonstrations and lectures; seminars; individual and group critiques. The M.F.A. candidate, as part of this seminar, regularly participates in critiques in which his or her

ARS 800: Summer Research
work is analyzed by guest faculty and art history/criticism faculty and graduate students, as well as by his or her peers. The visual arts seminar, where applicable, includes field trips and assignments of special lectures, panels, seminars, and other events of the professional art world.

Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

ARS 800: Summer Research

BCB

Biochemistry and Cell Biology

BCB 551: Introduction to Research in Biochemistry and Cell Biology
A series of talks, discussions, and practical exercises to address topics related to research in biochemistry and cell biology such as laboratory etiquette, the laboratory notebook: practical and legal aspects; experimental design; critical evaluation of the literature; analysis and presentation of data; and experimental techniques used in biochemistry and cell biology.
Prerequisites: Matriculation in MS program or permission of instructor
Fall, 2 credits, Letter graded (A, A-, B+, etc.)

BCB 552: Advanced Laboratory Methods in Biochemistry and Cell Biology
Introduces the details of theoretical principles and experimental techniques used to investigate the properties and interaction of biological molecules. Students will familiarize themselves with the instrumentation and techniques used to investigate different biochemical and cell biological problems through a combination of lectures, demonstrations, and/or laboratory work. Various topics will be covered such as cell culture and manipulation; protein purification and characterization using electrophoretic, spectroscopic, and thermodynamic techniques; the identification of proteins by mass spectrometry; nucleic acid purification and the utilization of PCR and microarray technologies; and modern microscope methods for investigating cellular function.
Prerequisite: Matriculation in MS program or permission of instructor
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

BCB 559: MS Research Practicum in Biochemistry and Cell Biology
The student will be introduced to modern biochemical and cell biological research techniques through participation in ongoing research in the laboratory of a Biochemistry and Cell Biology or associated faculty member for one semester. Student must obtain permission to register from the sponsoring faculty member.
Prerequisite: Matriculation in MS program or permission of instructor
Fall, 4 credits, S/U grading

BCB 599: MS Thesis Research in Biochemistry and Cell Biology
Thesis research will be conducted in the laboratory of a Biochemistry and Cell Biology or associated faculty member, including potentially an internship under the guidance of an approved mentor in the laboratory of a local biotechnology company. Student must identify and obtain permission to register from the sponsoring faculty member.
Prerequisite: Matriculation in MS program or permission of instructor
Fall, 1-9 credits, S/U grading

BEE

Ecology and Evolution

BEE 500: Directed Readings in Population Biology
Directed readings in topics of current interest, under supervision of a faculty sponsor, culminating in one or more critical review papers.
Prerequisite: Sponsor and approval of master's program executive committee
Fall and Spring, 1-3 credits, S/U grading
May be repeated for credit.

BEE 501: Directed Readings in the Biology of Organisms
Directed readings in topics of current interest, under supervision of a faculty sponsor, culminating in one or more critical review papers.
Prerequisite: Sponsor and approval of master's program executive committee
Fall and Spring, 1-3 credits, S/U grading
May be repeated for credit.

BEE 550: Principles of Ecology
Population dynamics, interactions of organisms, theoretical concepts of community structure and their biological and evolutionary implications.
Prerequisite: Permission of instructor
Fall, 4 credits, Letter graded (A, A-, B+, etc.)

BEE 551: Principles of Evolution
Biological evolution, including the genetics of populations, speciation, evolution of higher taxa, and the fossil record.
Fall, 4 credits, Letter graded (A, A-, B+, etc.)

BEE 552: Biometry
An intensive course in statistical theory and methodology. The analysis of real biological data is emphasized. Topics include analysis of variance, simple multiple and curvilinear regression analysis, correlation analysis, and goodness of fit tests.
Spring, 4 credits, Letter graded (A, A-, B+, etc.)

BEE 553: Multivariate Analysis in Biology
An introduction to multivariate statistical analysis for biologists. Topics include general least squares analysis, MANOVA, cluster analysis, and factor analysis.
Prerequisite: BEE 552 or equivalent
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

BEE 554: Population Genetics and Evolution
A general introduction to mathematical population genetics and evolutionary theory. The effects of mutation, recombination, selection, and migration are studied. Modern concepts in both theoretical and experimental population genetics are covered.
Prerequisite: BEE 552 or equivalent, and a course in evolution
Spring, 0-3 credits, Letter graded (A, A-, B+, etc.)

BEE 555: Mathematical Methods in Population Biology
This course covers a variety of mathematical methods used in modern theoretical biology. Topics include linear algebra and applications, ordinary and partial differential equations, and stochastic processes. Examples from population biology, i.e., mathematical ecology and population genetics, are used throughout.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

BEE 556: Research Areas of Ecology and Evolution
A description of the current research areas of ecology and evolution, broadly conceived. All first-year ecology and evolution students are expected to participate.
Fall and Spring, 1-2 credits, S/U grading
May be repeated for credit.

BEE 558: Tutorial Readings
Individual tutorial study with an instructor in the Graduate Program in Ecology and...
Evolution for the purpose of background reading in an area of ecology and evolution.

Fall and Spring, 1-4 credits, S/U grading
May be repeated for credit.

**BEE 559: Individual Studies in Organisms**
A detailed study of the biology of a selected systematic group chosen by the graduate student and a faculty member. This is conducted as a tutorial course.

Fall and Spring, 1-4 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

**BEE 561: Macroevolution**
This course emphasizes the process generating large-scale evolutionary trends and patterns. Topics include rates of evolutionary change; patterns of speciation and extinction, including radiations and mass extinctions; the role of constraint and innovation in molding evolutionary patterns; adaptive landscapes and complex character evolution; development and evolution; the origin and importance of major body plans; and the role of biogeography and climate in evolution.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

**BEE 562: Concepts and Methods in Evolutionary Biology**
The course aims at achieving two related objectives: first, to provide graduate students in Ecology & Evolution, other biology departments, as well as Philosophy, with a basic understanding of the varied methods (both experimental and statistical) that make up the body of evolutionary quantitative biology. The focus will be in particular on quantitative genetics and its interface with more modern approaches, including QTL mapping, bioinformatics and the various "omics" (genomics, proteomics, etc.). Second, students will become familiar with the fundamental concepts of philosophy of science, in particular as they relate to the conceptual analysis of the ideas that shape modern evolutionary and ecological theory. In this respect, the focus will be both on philosophical concepts such as falsificationism, induction, deduction, hypothesis testing and the nature of evidence, as well as on the meaning of key ideas in evolutionary ecology, like natural selection, genetic drift, and constraints.

3 credits, Letter graded (A, A-, B+, etc.)

**BEE 564: Geometric Morphometrics**
An introduction to theory and methods used in geometric morphometrics. Image analysis, outline methods, landmark methods, and shape statistics are covered.

Prerequisite: BEE 552 or equivalent; BEE 553 recommended
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**BEE 565: Molecular Evolution**
An introduction to the use of molecular information in population genetics, evolution, and taxonomy. This course combines discussions of methodology, data, and theory to illustrate how molecular information is changing our view of the evolutionary process.

Prerequisite: BEE 551 or permission of instructor
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

**BEE 566: Horizons in Ecology and Evolution**
The course is designed to provide beginning graduate students in Ecology and Evolution with an extended perspective on current and developing trends in this field. It will be based on readings (empirical and review papers) and discussion on diverse topics. The hour-long class will meet on a weekly basis. Each class session will be led by the faculty member with expertise in the scheduled topic of study.

Offered in Spring, 1 credit, S/U grading

**BEE 567: Molecular Diversity Laboratory**
This course will provide hands-on experience in established and recently developed methods of detecting and analyzing molecular variation (DNA, RNA, Proteins) in nature. Natural populations of Drosophila melanogaster will be the model material for this laboratory. The main theme of this course is that molecular variation is abundant in nature and is an important tool for understanding adaptive evolution and species relationships.

Prerequisite: permission of instructor
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**BEE 571: Ecology Laboratory**
This course stresses the collection, analysis, and interpretation of ecological data, mostly in terrestrial settings. Laboratory and field exercises demonstrate the operation of general ecological principles in specific populations and communities.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**BEE 572: Conservation Biology**
Society and individual lives are increasingly affected by environmental degradation at different scales. From the decline of local fisheries to global climate change, multiple crises threaten the biodiversity and ecosystems that sustain us humans. This course introduces the scientific foundations of conservation biology, along with examples from real-world conservation. The course reviews the biological concepts that underlie conservation including habitat requirements, population dynamics, biogeography, and population genetics. Analysis of case studies on the effects of human activities on biological diversity and ecosystem services will be used to explore the interdisciplinary nature of the practice of conservation. This course will prepare students for careers in environmental sciences and ecology.

Offered in Spring, 3 credits, Letter graded (A, A-, B+, etc.)

**BEE 573: Developmental Thinking in Evolutionary Biology**
One major goal of this course is to introduce the theoretical framework of evolutionary Developmental Biology (Evo-Devo). Much of the research in this field of biology aims to uncover how developmental mechanisms and genes have changed in the evolution of phenotypes. One ultimate goal is to discover the "logic# that governs the production of the phenotypic variation available for natural selection. These diverse goals also mean that Evo-Devo encompasses research from empirical investigation of developmental mechanisms to theoretical models and predictions. A common requirement for all these endeavors is the introduction of developmental thinking into formulation of research questions and interpretation of results. The course will teach a broad understanding of developmental thinking and how it influences various concepts used in evolutionary biology. Throughout the course we will consider both the effects of evolution on development, and the effects of development on evolution. The most critical papers will be reviewed and discussed and possibilities for future research will be evaluated. Topics covered will include evolutionary transitions, biological variation, stem cells and aging, developmental reprogramming, causality bottlenecks, development in innovations and extinctions.

Offered in Spring, 3 credits, Letter graded (A, A-, B+, etc.)

**BEE 574: Landscape Ecology Laboratory**
A computer lab course focusing on spatial concepts, methods, and tools for addressing environmental problems. The course will be based on fundamental concepts in ecology and environmental science and extend that
knowledge, as well as teaching technical skills, including the use of geographic information systems (GIS) software, image processing, spatially explicit modeling, and spatial statistics. The lab exercises will introduce a variety of spatial approaches for addressing problems in environmental protection, ecotoxicology, natural resource management, conservation biology and wildlife management.

Offered
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

BEE 575: Evolutionary Ecology
The approach is to understand the theoretical basis and review empirical tests of diverse topics. The format includes both lectures and student-led discussions of primary literature.
Prerequisite: BEE 550; BEE 551, or permission of instructor
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

BEE 576: Principles and Applications of Ecology and Evolution
An overview of the principles of ecology and evolutionary biology, and the applications of these principles in conservation biology, environmental and health sciences, and resource management. The course will cover fundamental concepts and research questions in population, community, and ecosystem ecology; population genetics; and evolutionary ecology. These principles will be discussed in the context of contemporary issues, such as global climate change, biodiversity loss, environmental contaminants, infectious diseases, invasive species, and management of ecological resources.
Offered
Fall, 4 credits, Letter graded (A, A-, B+, etc.)

BEE 585: Research Design and Analysis in Ecology and Evolution
This course covers topics relevant to statistical aspects of carrying out research in ecology and evolution as well as interpreting the results of one's own and others' analyses, particularly in field data and for experimental data in the lab and field. The topics include quantification of spatial pattern and spatial heterogeneity, recognizing and accounting for indirect effects and artifacts, design and analysis of experiments, meta-analysis and quantitative research synthesis. This course will also provide an introduction to ecological niche modeling and bioinformatics (focused on species and traits). We will review a synthetic set of tools useful for a broad range of questions in ecology and evolution.
Offered
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

BEE 586: Introduction to Ecological Modeling
This course will provide students with a familiarity of the major concepts, approaches, and underlying rationale for modeling in the ecological sciences. Topics will include reviews of theoretical and empirical models, the use of models in adaptive management, and how to confront models with data to evaluate alternative hypotheses. Roughly 1/3 of the course will be devoted to the use of models in management, focusing on the problems of fitting models to data and management pitfalls that follow. Course work will consist of readings, in class exercises, and group assignments that involve the construction, analysis, and interpretation of ecological models.
Prerequisite: BEE 550, BEE 552; MAT 131 or equivalent; any statistics course.
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

BEE 587: Applied Ecology and Conservation Biology Laboratory
A computer laboratory course introducing students to ecological risk analysis and conservation biology. Laboratories are based on interactive software. Computer simulation techniques for addressing problems in applied ecology are emphasized.
This course is co-scheduled with BEE 353 for Spring 2012.
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

BEE 588: Current Topics in Ecology and Evolution
Subject matter varies from semester to semester, depending upon the interests of students and staff.
Fall and Spring, 2 credits, S/U grading May be repeated for credit.

BEE 599: Research
Original investigation undertaken with the supervision of a member of the staff.
Fall and Spring, 1-12 credits, S/U grading May be repeated for credit.

BEE 670: Informal Seminar
Presentation of preliminary research results and current research problems by students and faculty.
Fall and Spring, 0-2 credits, S/U grading May be repeated for credit.

BEE 671: Ecology and Evolution Colloquium
A weekly series of research seminars presented by visiting scientists as well as by the faculty.
Required every semester of all ecology and evolution graduate students.
Fall, 0-2 credits, S/U grading May be repeated for credit.

BEE 672: Ecology and Evolution Colloquium
A weekly series of research seminars presented by visiting scientists as well as by the faculty.
Required every semester of all ecology and evolution graduate students.
Spring, 0-2 credits, S/U grading May be repeated for credit.

BEE 689: Seminar on Adaptations of Marine Organisms
Seminars on selected topics concerning ecological, genetic, and evolutionary problems in the marine environment.
Fall or Spring, 0-2 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

BEE 690: Seminar on Evolutionary Processes
Seminars on selected topics concerning evolutionary processes.
Fall or Spring, 0-2 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

BEE 691: Seminar on Systematics and Phylogeny
Seminars on selected topics in systematics. Topics will include the theory of classification and numerical taxonomy, both phyletic and cladistic.
Fall or Spring, 0-2 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

BEE 692: Seminar on the Environment and Human Affairs
Student seminars on selected topics concerned with the effect of man on the environment. Application of ecological and evolutionary theory to the solution of human problems.
Fall or Spring, 0-2 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

BEE 693: Seminar on Population and Community Ecology
Student seminars on selected topics in population and community ecology.
Fall or Spring, 0-2 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

BEE 695: Seminar on Ecological Processes
Seminars on selected topics concerning ecological processes at the individual, population, community, ecosystem, and global levels.

Offered
Fall and Spring, 0-2 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

BEE 699: Dissertation Research on Campus
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place on SBU campus, at Cold Spring Harbor, or at the Brookhaven National Lab.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

BEE 700: Dissertation Research off Campus - Domestic
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place off-campus, but in the United States and/or U.S. provinces. Please note, Brookhaven National Labs and the Cold Spring Harbor Lab are considered on-campus. All international students must enroll in one of the graduate student insurance plans and should be advised by an International Advisor.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

BEE 701: Dissertation Research off Campus - International
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place outside of the United States and/or U.S. provinces. Domestic students have the option of the health plan and may also enroll in MEDEX. International students who are not in their home country are not covered by mandatory health insurance. If they are to be covered by another insurance plan they must file a waiver be second week of classes. The charge will only be removed if other plan is deemed comparable.
All international students must received clearance from an International Advisor.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

BEE 800: Full-Time Summer Research
May be repeated for credit.

Genetics

BGE 510: Graduate Genetics
This course investigates fundamental aspects of the transmission and expression of genetic information in prokaryotic and eukaryotic systems. The course is organized in a way that allows the students to appreciate the breadth of genetics research, while also gaining an in-depth understanding of selected important topics. Students explore the use of both classical and molecular genetic approaches to understand biological processes in genetics model systems including yeast, flies, worms, mouse, and man.
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

BGE 530: Laboratory Rotation
The student rotates through laboratories of four different genetics program faculty members during the first year. The selection of the laboratories is made by the student, in conjunction with individual faculty, and with the approval of the program director. By taking part in ongoing projects, the student will learn experimental procedures and techniques and become acquainted with research opportunities in the participating programs.
Prerequisite: Permission of instructor
Fall and Spring, 1-8 credits, S/U grading
May be repeated 2 times FOR credit.

BGE 531: Graduate Student Seminar in Genetics
Students have the opportunity to present their research to other students and faculty on an annual basis. Students in the first or second year will present brief seminars as part of a one-day symposium with all of their classmates. Advanced students present research seminars as part of a weekly research seminar series that is attended by faculty and students. Although the first and second year students do not present in this weekly seminar series, they should attend these seminars as it provides an excellent mechanism for learning about current areas of research interest.
Fall and Spring, 0-1 credits, S/U grading
May be repeated for credit.

BGE 550: Genetics Outside Seminar
Outside seminars and special topics courses in areas relating to genetic studies.
1-4 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

BGE 599: Graduate Research
Original investigation undertaken with the supervision of a member of the program.
Fall and Spring, 1-9 credits, S/U grading
May be repeated for credit.

BGE 691: Readings in Genetics
Journal Club on thematic topics in different areas of current genetics research
Prerequisite: Permission of instructor
Fall and Spring, 1 credit, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

BGE 699: Dissertation Research on Campus
Prerequisite: Advancement to candidacy (G5). Major portion of research must take place on SBU campus, at Cold Spring Harbor, or at the Brookhaven National Lab.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

BGE 700: Dissertation Research off Campus - Domestic
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place off-campus, but in the United States and/or U.S. provinces. Please note, Brookhaven National Labs and the Cold Spring Harbor Lab are considered on-campus. All international students must enroll in one of the graduate student insurance plans and should be advised by an International Advisor.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

BGE 701: Dissertation Research off Campus - International
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place outside of the United States and/or U.S. provinces. Domestic students have the option of the health plan and must contact the Insurance Office for the insurance charge to be removed. International students who are not in their home country are charged for the mandatory health plan and must contact the Insurance Office for the insurance charge to be removed. International students who are not in their home country are not covered by mandatory health insurance. If they are to be covered by another insurance plan they must file a waiver be second week of classes. The charge will only be removed if other plan is deemed comparable.
All international students must received clearance from an International Advisor.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

BGE 800: Summer Research
May be repeated for credit.
GRADUATE COURSE DESCRIPTIONS

Biology

BIO 511: Topics in Biotechnology
An introduction to the field of biotechnology. The course will survey the history of the development of genetic engineering, methodologies used in biotechnology, applications of biotechnology in medicine, agriculture and manufacturing, and the implications of these technologies for society. Intended for the students in the MAT Science and MALs programs.

Offered
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

BIO 515: Current Topics in Microbiology
A survey of microbiology with an emphasis on microbial ecology, the role of microbes in the biosphere and the methodology used to explore these areas. The course is organized around two resources available online: Unseen Life on Earth: An Introduction to Microbiology, which was produced by The American Society for Microbiology (http://www.learner.org/resources/series121.html) and the New York State core curriculum for The Living Environment (http://www.p12.nysed.gov/ciai/mst/sci/lis.html) . Intended for the students in the MAT Science and MALs programs.

Offered
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

BIO 520: Topics in Genetics
A survey of genetics organized around a particular topic, including gene regulation, developmental genetics, cancer genetics, epigenetics with emphasis on areas with emerging new insight. The methodology used to study these areas will also be explored. Intended for the students in the MAT Biology and PhD Science Education programs.

Offered
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

BIO 521: Laboratory Science Curriculum Development
Development of curriculum materials appropriate for a secondary school biology classroom. Students may take this course in their second semester of the Master of Arts in Teaching Science program.

Offered
Fall and Spring, 1-6 credits, Letter graded (A, A-, B+, etc.)

May be repeated for credit.

BIO 542: Model Systems for the Living Environment
Introduction to microbial model systems used in biological research such as yeast, nematodes and slime molds. Particular attention will be given to using these systems in the classroom to illustrate key concepts in introductory biology. Students will read and discuss research papers selected from the current scientific literature. Topics to be covered include: life cycle, laboratory techniques and design of inquiry-based investigations.

Offered
Summer, 3 credits, Letter graded (A, A-, B+, etc.)

BIO 600: Practicum in Teaching
Fall and Spring, S/U grading
May be repeated for credit.

BIO 601: Practicum in Teaching
Fall and Spring, 1-3 credits, S/U grading
May be repeated for credit.

BME

Biomedical Engineering

BME 501: Engineering Principles in Cell Biology
Course content is directed toward describing physico-chemical and biological interactions within cells, and between cells and their environment. The course has two main objectives: 1) to equip students with essential knowledge and stimulate intuitive understanding of molecular cell biology; 2) to introduce and develop common engineering concepts and approaches for quantitative analysis of physical chemical systems in the context of cell biology. The long-term goal is to help students operate effectively at the interface of cell biology and engineering, and apply their knowledge of molecular and cellular phenomena and the analytical techniques learned in this course to the design and development of products and processes for improving health and/or medical care.

Therefore, a major component of this course will be an individual project requiring the development of a patent for a biomedical device or process, which relies on one or more of the biological (cell and molecular level) and engineering principles covered in class.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

May be repeated 2 times FOR credit.

BME 502: Advanced Numerical & Computation Analysis Applied to Biological Systems
Numerical analyses of Biological Data. A unified mathematical/time series framework for modeling and mining biological data.

Applications range from cardio-respiratory, renal blood pressure/flow and sequence (DNA,RNA, proteins) to gene expression data. Tools of data analysis include linear algebra, interpolation and extrapolation, parametric and nonparametric spectral estimation with the FFT and singular value decomposition, statistical description of data and integration of ordinary differential equations. Special focus will be placed on the use of linear and nonlinear numerical methods for the identification of physiological system dynamics and the development of computer simulation techniques to study dynamic response of physiological systems. Cannot be repeated for credit.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

BME 503: Cell and Molecular Imaging
This course will cover basics of optics, microscopy, spectroscopy and fluorescence in the context of imaging at the cellular and molecular level. Recently developed advanced imaging techniques for probing protein interactions and live cell functions are also discussed. The course is organized in 3 modules:

3 credits, Letter graded (A, A-, B+, etc.)

BME 504: Biomaterials Science and Analysis
Course content is directed toward providing an introductory treatment of the engineering issues implicit in understanding living tissue interactions with processed materials. Emphasis on identifying and eliminating surface contamination, corrosion, and optimizing material surface properties and compatibility.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

BME 505: Principles and Practice of Biomedical Engineering
Introduces first year students to the basic and clinical research at the cutting edge of biomedical engineering. The course has two key components: the first is a seminar series presented by internationally renowned bioengineers. An interactive discussion of topic-specific scientific literature precedes the formal presentation. The second component of the course is teaming up with a physician, in rounds, the operating theater, clinics, etc., to get exposure to the real-life problems which face the medical community. It is hoped that the mix of science and clinic will move students towards determining how they can make contributions to health and society.

2 credits, Letter graded (A, A-, B+, etc.)
BME 508: Molecular and Cellular Biomechanics
Course content revolves around the effects and interactions of mechanical forces at the cellular and molecular level. The topics will range from describing the molecular and cellular basis of the adaptation of tissues to physical signals, to prescribing specific mechanical environments for improved tissue engineering, to delineating relevant molecular, cellular, and biomechanical techniques, all the way to issues involved in the development and approval of diagnostics, and therapeutics in molecular engineering. For a deeper understanding of the course material as well as to allow students to apply their newly gained knowledge, this course will contain a module on the design and analysis of experiments (i.e., applied biostatistics) and incorporate practical exercises in both laboratory (e.g., a real time PCR experiment) or simulated computer settings (e.g., modeling of cell behavior).
Prerequisite: BME 501 or permission of instructor.
Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated 2 times FOR credit.

BME 509: Fundamentals of the Bioscience Industry
A 4-module course set up to provide students with a comprehensive introduction to the complexities of the bioscience business environment.
Prerequisite: Must be either a BME or MBA graduate student (West Campus). All other students must obtain permission from the instructor.
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

BME 510: Biomechanics
This course emphasizes the application of continuum mechanics to living tissues and organs in order to describe the material properties and their behavior under loading and stress. The interrelationship between biomechanics and physiology is examined in normal function and in disease processes. This course focuses on the physiology of tissue and organ systems in the context of mechanics, stress, strain, viscoelasticity and material behavior, and the constitutive equations and the field equations governing fluids and fluid flow, with an emphasis on the cardiovascular and musculoskeletal systems. Emphasis is placed on the utilization of engineering principles to analyze processes at the tissue and organ levels, covering soft and hard tissues and organs (blood, cardiovascular system, bone, cartilage, etc.) and to understand how these principles could be applied towards the design and development of prosthetic devices.
3 credits, Letter graded (A, A-, B+, etc.)
May be repeated 2 times FOR credit.

BME 517: Radiation Physics
This graduate offering provides an initial physical background required for the study of the Medical Physics. Sources of ionizing radiation including radioactivity (natural and manmade) and x-ray producing devices are studied as well as sources of nonionizing radiation such as radiofrequency and ultrasound. The physical aspects of these radiations are characterized by their interaction with matter and methods for their detection. Each student will select and present a proposal for solving a clinical medical physics problem.
Prerequisites: Modern Physics or equivalent
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

BME 518: Radiobiology
The biological consequences of irradiation (ionizing, ultrasound, laser, RF, etc.) will be examined. Interaction mechanisms will first be examined followed by examination of the radiation impact at the molecular and cellular level. The use of radiation for therapeutic gain will be considered. As well, models will be developed for risk estimates. Topics to be covered will include: target theory, biological response, NSD and risk estimates.
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

BME 519: Medical Health Physics
This course discusses the health physics and safety issues associated with radiological devices, facilities and procedures.
Prerequisite: BME 517.
Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated 2 times FOR credit.

BME 520: Lab Rotation I

BME 521: Lab Rotation II

BME 525: Tissue Engineering
Course deals with basics of biomaterial formulation that are relevant to tissue engineering, leading to the principles and practice of designing an engineered tissue, which will be facilitated by a design project.
Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated 2 times FOR credit.

BME 526: Biological Systems Engineering
This course is a hands-on study of systems engineering in biology, using computer modeling to conceptualize and simulate a wide variety of applications. All skills taught in class. Appropriate and applicable to all BME tracks. May not be repeated for credit.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

BME 530: Medical Image Formation
This course covers the physical aspects of medical image formation. Image receptor design/optimization, reconstruction techniques, device hardware and performance characteristics are considered.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated 2 times FOR credit.

BME 531: Biosensing and Bioimaging
Basic concepts of biosensing and bioimaging, which include the elements of biological systems and bioimmobilizers, traditional electrode and novel optical transducers, and advanced biomedical optical imaging systems.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated 2 times FOR credit.

BME 532: Time Series Modeling of Biological Systems
A unified mathematical/time series framework for modeling and mining biological data. Applications range from cardio-respiratory, renal blood pressure/flow and sequence (DNA, RNA, proteins) to gene expression data. Tools of analysis include neural networks, time-invariant and time-varying spectral methods, fractal and nonlinear dynamics techniques, hidden markov model, clustering analysis, and various system identification techniques.
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

BME 534: Functional Genomics
Course provides foundation in concepts of functional genomics and proteomics. Topics include organization and complexity of the mammalian genome and mechanisms of expression of genes, gene expression analysis technologies with a strong focus on construction and utilization of DNA microarrays, and tools for determining gene function by perturbation of gene expression.
Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated 2 times FOR credit.

BME 540: Radiation Oncology Physics
This course provides a background in therapeutic instrumentation, dosimetry and treatment planning.
Prerequisite: BME 517
Fall, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated 2 times FOR credit.

**BME 546: Statistical Analysis of Physiological Data**

Statistical methods useful in analyzing common types of physiological data. Topics include probability, data distributions, hypothesis testing, with parametric and non-parametric methods, ANOVA, regression and correlation and power analysis. Emphasis is on experimental design and appropriate, efficient use of statistical software.

1 credit, Letter graded (A, A-, B+, etc.)

**BME 571: Microfluids in Biological Systems**

This course will outline theory and applications of special fluid handling conditions associated with living systems.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

*May be repeated 2 times FOR credit.*

**BME 572: Biomolecular Analysis**

This interdisciplinary course is intended for graduate students and advanced undergraduates in departments such as Biomedical Engineering, Chemistry, Physics, Biology and Chemical Engineering. This course will give an introduction to single molecule experiments using fluorescence, optical traps, AFM cantilevers, microneedles, magnetic microbeads as well as micro and nanofluidic devices.

Prerequisites: BME 501 and 502, or instructor approval.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

*May be repeated 2 times FOR credit.*

**BME 547: Model-Based Analysis of Physiological Data**

The analysis of common biochemical and physiological data by non-linear regression of data models and biophysical models of physiological and biochemical processes. Examples include binding kinetics, compartmental mass transfer and spectral analysis.

1 credit, Letter graded (A, A-, B+, etc.)

**BME 548: Measurement and Analysis in Physiological Research**

The acquisition and analysis of data-arising from common biochemical and physiological measurements. Topics include computer-based data acquisition and processing, densitometry, microscopy, and image analysis and processing. Emphasis is on experimental design and strategies for optimizing signal to noise ratio of measurements.

1 credit, Letter graded (A, A-, B+, etc.)

**BME 549: Experimental Techniques in Systems Physiology**

A series of lectures and laboratory exercises designed to introduce students to invitro experimental techniques used in systems physiology. Emphasis will be placed on the ethical use of rodents in biomedical research and the measurement of physiological variables. Data acquisition and analysis procedures used in cardio-vascular, respiratory, neural and renal physiology will also be covered.

1 credit, Letter graded (A, A-, B+, etc.)

**BME 550: Mathematical Models of Physiologic & Biophysical Systems**

An introduction to mathematical modeling of cell and tissue function. Topics include the derivation and numerical solution of models of cell homeostasis, membrane transport and excitability, and cell signaling and metabolism. Grading is based on problems, student presentation, and completion of a modeling project.

3 credits, Letter graded (A, A-, B+, etc.)

**BME 570: Contemporary Biotechnology**

General discussion on the nature of biotechnology and its historical development,
This course is designed to prepare the Medical Physics graduate student in the area of clinical Nuclear Medicine Imaging. In this clinical rotation, the students will be exposed to radionuclide processes, radiopharmaceuticals including radioactive gases and aerosols-preparation, characteristics and radiation dosimetry, in vitro and in vivo radiation detection systems, imaging systems and their performance evaluations. In addition, basic medical ethics, clinical interpretations and radiation safety will be covered. A total of 150 clinical hours will be completed in this program.

Fall, 4 credits, S/U grading
May be repeated 2 times FOR credit.

**BME 617: Clinical Radiation Oncology Physics**

This course is designed to prepare the Medical Physics graduate student in the area of clinical radiation oncology physics. In this clinical rotation, the student will learn by observation and participation some of a selection of the following medical physics procedures: LINAC Beam Dosimetry (ion chamber measurement techniques, film dosimetry (radiographic and radiochromic), diode dosimetry, TLD dosimetry, water phantom scanning), implementation of photon and electron beam calibration protocols (AAPM TG51), LINAC beam data measurement and tabulation, commissioning a TPS system, LINAC acceptance testing, LINAC monthly QA, HDR QA and planning, and IMRT inverse planning and IMRT clinical QA. A total of 120 clinical hours will be completed in this program. Prerequisite: BME 517 and BME 540 with a B+ or better.

Spring, 4 credits, S/U grading

**BME 620: Space Radiation Biology**

An extensive series of lectures, training sessions and laboratory activities sponsored by the NASA’s Radiation Health Program in collaboration with BNL. The material is oriented to cover basic and state of the art concepts in space radiation environment, physics and radiobiology. Content includes basic concepts in physics, dosimetry, radiobiology, space radiation problems and accelerator operations. Concurrent sessions are provided to complete specific BNL training and plan and prepare experiments for low- and high-LET radiation exposures. Students are trained in NSRL operations and are able to run control experiments using gamma rays in preparation for NSRL runs, and subsequently experiments at the NSRL using heavy ions. Data are obtained from different endpoints are discussed and analyzed with the instructors. Homework are used to test the student's level of comprehension of the lectures and laboratory activities. The write up of a full BNL beam time request proposal is required of each student.

4 credits, Letter graded (A, A-, B+, etc.)

**BME 690: Biomedical Engineering Research**

Biomedical Engineering research for doctoral students who have already received their M.S. degree, but have not yet advanced to candidacy.

Fall and Spring, 1-9 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

**BME 698: Practicum in Teaching**

Undergraduate teaching to be supervised by a faculty member of the Program in Biomedical Engineering. Course to be identified by the student and graduate studies director.

Fall and Spring, 1-3 credits, S/U grading
May be repeated for credit.

**BME 699: Dissertation Research on Campus**

Prerequisite: Students must be advanced to candidacy (G5); permission of instructor and enroll in appropriate section. Major portion of research must take place on SBU campus, at Cold Spring Harbor, or at the Brookhaven National Lab.

Fall, 1-9 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

**BME 700: Dissertation Research off Campus - Domestic**

Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place off-campus, but in the United States and/or U.S. provinces. Please note, Brookhaven National Labs and the Cold Spring Harbor Lab are considered on-campus. All international students must enroll in one of the graduate student insurance plans and should be advised by an International Advisor.

Fall, 1-9 credits, S/U grading
May be repeated for credit.

**BME 701: Dissertation Research off Campus - International**

Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place outside of the United States and/or U.S. provinces. Domestic students have the option of the health plan and may also enroll in MEDEX. International students who are in their home country are not covered by mandatory health plan and must contact the Insurance Office for the insurance charge to...
be removed. International students who are not in their home country are charged for the mandatory health insurance. If they are to be covered by another insurance plan they must file a waiver by the second week of classes. The charge will only be removed if other plan is deemed comparable.

All international students must receive clearance from an International Advisor. Fall, 1-9 credits, S/U grading May be repeated for credit.

**BME 800: BME RESEARCH**

Full-time summer research.

S/U grading

May be repeated for credit.

**BNB**

**Neurobiology and Behavior**

**BNB 551: Writing Neuroscience**

Seminar course for doctoral students in Neuroscience providing practical instruction in written communication in Neuroscience. Topics include writing effective abstracts, cover letters, figure captions, and grant specific aims, among others.

1-2 credits, Letter graded (A, A-, B+, etc.)

**BNB 552: Neurobiological Techniques**

A series of laboratory exercises designed to give students hands-on experience in the basic laboratory techniques of contemporary neuroscience. Includes intracellular and extracellular recording, neuronal tissue culture, neuroanatomical techniques, and integrative physiology.

Fall, 2 credits, Letter graded (A, A-, B+, etc.)

**BNB 555: Laboratory Rotations in Neuroscience**

Course for doctoral students in Neuroscience in which students participate in three formal laboratory rotations in program faculty laboratories during the first year. Student make oral presentations for each rotation. Instruction is provided in how to organize and present material in a seminar format, including the proper use of visual aids. Enrollment restricted to students in the Graduate Program in Neuroscience.

Fall and Spring, 1-3 credits, Letter graded (A, A-, B+, etc.)

May be repeated 2 times FOR credit.

**BNB 560: Introduction to Mammalian Neuroanatomy**

This course consists of visual presentations and supplemental lectures providing an overview of the structural organization of the nervous system. The mammalian nervous system and its sensory, motor and cognitive components are emphasized. Opportunities for examination of whole brains and historical sections, and some hands-on experience with basic neuroanatomical techniques may also be available.

1-2 credits, Letter graded (A, A-, B+, etc.)

**BNB 561: Introduction to Neuroscience I**

First of a two semester core course introducing students to basic principles of neuroscience. The major focus is cellular and molecular neuroscience. Topics covered include the ionic basis of resting potentials and electrical excitability, the structure, function and molecular biology of voltage- and ligand-gated ion channels, exocytosis, cellular networks, and gene regulation.

4 credits, Letter graded (A, A-, B+, etc.)

**BNB 562: Introduction to Neuroscience II**

Second of two-semester core course introducing students to basic principles of neuroscience. The major focus is systems neuroscience. Topics covered include analyses of all major sensory systems, motor systems, and systems mediating higher order, cognitive functions in the nervous system.

4 credits, Letter graded (A, A-, B+, etc.)

**BNB 563: Advanced Topics in Neuroscience I**

This course includes one to three separate modules taught by different faculty on focused topics in neuroscience, typically focusing on synaptic plasticity and development.

1-3 credits, Letter graded (A, A-, B+, etc.)

**BNB 564: Advanced Topics in Neuroscience II**

This course includes one to three separate modules taught by different faculty on focused topics in neuroscience.

Spring, 1-3 credits, Letter graded (A, A-, B+, etc.)

**BNB 565: Developmental Neuroscience**

A modular course introducing concepts in the development of the nervous system. Topics can include neuroembryology, neuronal differentiation, synapse formation, and specificity and plasticity of connections in vertebrates and invertebrates.

Offered

Fall, 1 credit, Letter graded (A, A-, B+, etc.)

May be repeated 2 times FOR credit.

**BNB 566: Neurobiology of Disease**

This advanced seminar course is coordinated with the Neurobiology of Disease lecture series hosted by the Program in Neuroscience each Spring semester. The Program invites 5-6 distinguished scientists to present research seminars organized around the broad topic of neurobiological and neurological diseases. Students read and discuss papers recommended by the guest speakers. This course also provides students the opportunity to meet with the guest seminar speakers.

Offered Spring, 1 credit, Letter graded (A, A-, B+, etc.)

May be repeated 1 times FOR credit.

**BNB 597: Seminar Themes**

This course focuses on current research topics in neuroscience and is integrated with the Neuroscience Seminar Series. It is centered on a common research theme. Students discuss manuscripts, attend seminars and meet with outside speakers.

Offered Fall/Spring, 1-12 credits, S/U grading May be repeated for credit.

**BNB 599: Research**

Original investigation undertaken with supervision of a member of the staff.

Fall and Spring, 1-12 credits, S/U grading May be repeated for credit.

**BNB 655: Neuropharmacology**

An advanced course for graduate students interested in developing an understanding of neuropharmacology and research on this topic. Following a general introduction to the nerve cell structure, synaptic and chemical transmission, three themes receptors, receptors as channels, and G-protein-coupled receptors are developed. Recent advances in cell and molecular biology provide the framework for instruction and discussion. This course is offered as both HBH 655 and BNB 655.

Prerequisite: Admission to Graduate Health Sciences Center Program.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

**BNB 697: Neuroscience Seminar Series**

Seminar presentations delivered by faculty, associates, students and visiting speakers.

Fall and Spring, 0-1 credits, S/U grading May be repeated for credit.

**BNB 699: Dissertation Research on Campus**

Original investigations undertaken as part of the Ph.D. program under the supervision of
the dissertation committee. Prerequisite: Must be advanced to candidacy (G5). Major portion of research must take place on SBU campus, at Cold Spring Harbor, or at the Brookhaven National Lab.

Fall, 1-9 credits, S/U grading
May be repeated for credit.

BSB 700: Dissertation Research off Campus - Domestic
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place off-campus, but in the United States and/or U.S. provinces. Please note, Brookhaven National Labs and the Cold Spring Harbor Lab are considered on-campus. All international students must enroll in one of the graduate student insurance plans and should be advised by an International Advisor.

Fall, 1-9 credits, S/U grading
May be repeated for credit.

BSB 701: Dissertation Research off Campus - International
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place outside of the United States and/or U.S. provinces. Domestic students have the option of the health plan and may also enroll in MEDEX. International students who are in their home country are not covered by mandatory health plan and must contact the Insurance Office for the insurance charge to be removed. International students who are not in their home country are charged for the mandatory health insurance. If they are to be covered by another insurance plan they must file a waiver by second week of classes. The charge will only be removed if other plan is deemed comparable.

All international students must received clearance from an International Advisor.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

BSB 800: SUMMER RESEARCH
May be repeated for credit.

BSB Biochemistry and Structural Biology

BSB 509: Experimental Biochemistry and Structural Biology
An introduction to modern biochemical research techniques. The student spends a half-semester in the laboratory of each of four different members of the faculty. In each laboratory, the student participates in some aspect of the research being pursued by the faculty member.

Fall and Spring, 1-6 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

BSB 510: Experimental Biochemistry and Structural Biology
An introduction to modern biochemical research techniques. The student spends a half-semester in the laboratory of each of four different members of the faculty. In each laboratory, the student participates in some aspect of the research being pursued by the faculty member.

Fall and Spring, 1-6 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

BSB 510: Experimental Biochemistry and Structural Biology
An introduction to modern biochemical research techniques. The student spends a half-semester in the laboratory of each of four different members of the faculty. In each laboratory, the student participates in some aspect of the research being pursued by the faculty member.

Fall and Spring, 1-6 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

BSB 512: Structural Biology and Spectroscopy
Theoretical principles and experimental methods used in the study of proteins and nucleic acids, e.g., spectroscopy, magnetic resonance and diffraction.

Prerequisites: MCB 520, or undergraduate physical chemistry course, plus matriculation in graduate program or permission of instructor.
Fall, 2 credits, Letter graded (A, A-, B+, etc.)

BSB 515: Computational Methods in Biochemistry and Structural Biology
Computational methods used in sequence searching and analysis, bioinformatics, graphical analysis of proteins, and nucleic acids. Prerequisite: This class is restricted to first year BSB, HBM & HBH PhD students and 2nd year MCB PhD students. Exception requires approval from the course instructor.
Fall, 1 credit, S/U grading
May be repeated for credit.

BSB 532: Journal Club in Biochemistry and Structural Biology
Provides students with a forum for acquiring skills involved in the critical analysis and presentation of scientific data by active participation in seminars of major topics in structural biology and biochemistry, and critical discussion of selected topics with presentation of papers from the literature.

Prerequisites: Must be registered in the BSB Program.
Spring, 1 credit, S/U grading
May be repeated for credit.

BSB 581: Teaching Honors
Selected students whose performance in the basic required courses for the graduate program is in the top 10 percent conduct tutorials for first-year graduate students in the program and other students taking graduate courses for credit. The tutors are supervised and graded by faculty of the graduate program. Successful completion of this course makes students eligible to receive "Honors in Teaching" on their transcripts.

Fall and Spring, 1 credit, S/U grading
May be repeated for credit.

BSB 599: Research
Original investigation undertaken with the supervision of a faculty member.

Fall and Spring, 1-12 credits, S/U grading
May be repeated for credit.

BSB 601: Colloquium in Biochemistry and Structural Biology
A weekly series of talks and discussions by visiting scientists covering current research and thinking in various aspects of structural biology and biochemistry.

Prerequisites: Must be registered in the BSB Program.
Fall, 1 credit, S/U grading
May be repeated for credit.

BSB 602: Colloquium in Biochemistry and Structural Biology
A weekly series of talks and discussions by visiting scientists covering current research and thinking in various aspects of structural biology and biochemistry.

Prerequisites: Must be registered in the BSB Program.
Spring, 1 credit, S/U grading
May be repeated for credit.

BSB 603: Student Seminars in Biochemistry and Structural Biology
Seminars given by graduate students on the progress of their own thesis research. Required of all students every semester in which they are registered in the Graduate Program in Biochemistry and Structural Biology. Attendance is mandatory. Visitors are welcome. Prerequisite: Must be registered in the BSB Program.

Fall and Spring, 1 credit, S/U grading
May be repeated for credit.

BSB 604: Student Seminars in Biochemistry and Structural Biology

Stony Brook University Graduate Bulletin: www.stonybrook.edu/gradbulletin
Seminar given by graduate students on the progress of their own thesis research. Required of all students every semester in which they are registered in the Graduate Program in Biochemistry and Structural Biology. Attendance is mandatory. Visitors are welcome. Prerequisite: Must be registered in the BSB Program.

**CHE 501: Instrumental Methods in Chemistry**
Practical and theoretical aspects of instrumentation in chemistry. The primary emphasis is on contemporary methods of molecular structure determination such as X-ray crystallography, NMR, IR, and MS. Other topics may also be presented.

**CHE 502: Mechanisms and Strategies in Organic Synthesis**
This course will focus on (1) the meaning and practice of writing organic reaction mechanisms and (2) standard synthetic reactions, their mechanisms, and modern refinements. Examples and applications will be presented. The course will also discuss biomimetic syntheses and the use of mechanism in designing total syntheses.

**CHE 503: Synthetic Organic Chemistry**
A survey of the most important organic reactions from the viewpoint of synthetic utility, including many recent innovations in this field. Throughout the discussion of these methods, emphasis is placed upon their use in the synthesis of complex organic structures.

**CHE 504: Structure and Reactivity in Organic Chemistry**
Electronic and stereochemical theories relating to organic structure and reactions. Topics such as bonding, strain, aromaticity, MO theory, molecular rearrangements, pericyclic reactions, and photochemistry are covered. This course is intended to provide a foundation of knowledge at the beginning graduate level as preparation for advanced subjects in CHE 502 and CHE 503, and is complementary to CHE 501.

**CHE 511: Structural Inorganic Chemistry**
Properties and reactions of inorganic compounds are considered from the viewpoint of molecular and electronic structure. The modern bonding theories used in inorganic chemistry including molecular orbital, valence bond, and ligand field theories are developed using symmetry and group theory.

**CHE 514: Transition Metal Chemistry**
A topical course with an emphasis on the transition metals. Reaction mechanisms, synthesis, and structure are covered. Specific areas of concern include coordination chemistry, organometallic chemistry, bioinorganic chemistry, and selected topics from solid-state and non-transition metal chemistry.

**CHE 516: Solid-State Chemistry**
This course will provide an introduction to structure and bonding in solid materials. This class will survey the important structural classes of periodic solids and will discuss space groups and the crystallographic symmetry elements important to these materials. Topics that will be covered may include, but are not limited to: (i) The mechanisms by which crystals grow and common types of defects. (ii) An introduction to the basics of band theory. (iii) An overview of the important synthetic methods for preparing solid state materials in nanocrystalline, powder, thin film, and single crystal form. (iv) A survey of the important techniques for assessing the composition, homogeneity, and crystallinity of materials (such as SEM, TEM, AFM, STM), with an emphasis on powder x-ray diffraction.

**CHE 517: Structural Chemistry**
Much of chemistry is concerned with the properties of atoms and molecules that are too small to see directly. This course will cover a variety of advanced techniques for elucidating the atomic- scale structure of molecules and periodic solids. A central technique is diffraction, which probes periodic arrays.
The mathematical basis for diffraction will be presented, followed by practical examples of obtaining atomic coordinates from diffraction data (powder and/or single crystal). Other techniques that may be covered include the analysis of local structure in partially ordered or disordered solids (via techniques such as PDF, EXAFS, small angle scattering, or solid state NMR), and the basis of more complex diffraction experiments (neutron/electron diffraction, energy-dispersive/Laue diffraction, and diffraction under extreme pressure/temperature conditions).

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

CHE 518: Materials Chemistry
Our high technology world is driven forward by advances in materials chemistry. This class will discuss the origin of this technology, covering the synthesis, structures, and properties of advanced materials. These materials will be studied from a multidisciplinary perspective, since the knowledge required for their development spans more than one traditional academic discipline. This class will focus on broad topics with great current societal importance (energy, computing, nanoscience, etc.), and will discuss the materials at the heart of our present technology as well as novel classes of materials being developed for future technology applications. Specific topics may include batteries, fuel cells, catalysts, metallic conductors, semiconductors, superconductors, permanent magnets, magnetic films.

Co-listed with CHE 378
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

CHE 521: Quantum Chemistry I
Quantum theoretical concepts are discussed. Schrodinger wave mechanics and related mathematical techniques are illustrated by treatment of systems of chemical interest. Designed to form the theoretical basis for the study of chemical bonding, molecular structure, spectroscopy, and molecular collision phenomena.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

CHE 522: Molecular Spectroscopy
A detailed description of the theory and practice of molecular spectroscopy. Topics include the interaction of molecules with electromagnetic radiation and the time evolution of molecular energy states.

Prerequisite: CHE 521
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

CHE 523: Chemical Thermodynamics
A rigorous development of the fundamentals of thermodynamics and its application to a number of systems of interest to chemists, such as electrochemical cells, gases, and homogeneous and heterogeneous equilibrium. An introduction to statistical mechanics will also be included.

Fall, 1-3 credits, Letter graded (A, A-, B+, etc.)

CHE 524: Magnetic Resonance
This course provides an introduction to the fundamental quantum mechanics of the magnetism of spin-1/2 (and higher) particles. It includes a study of the Bloch equations (the responses of the magnetism to continuous-wave and pulsed irradiation) and a discussion of the experimental hardware and techniques commonly employed. Topics covered include the basics of the spin Hamiltonian (chemical shifts, J, dipolar, and quadrupolar couplings), dynamics and relaxation 1-D spectroscopy (spin and chemical exchange, lineshapes, spin echoes, etc.), 2-D spectroscopy (homonuclear and heteronuclear correlation), techniques for studies of solids and liquid crystals (magic angle spinning, cross polarization, quadrupolar echo), and the principles of magnetic resonance imaging. Applications to the biological and material sciences, as well as chemical problems, will be discussed.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

CHE 525: Theoretical Chemistry
This course stresses the physical theory underlying chemical phenomena. Special emphasis is given to advanced topics in electronic structure theory, molecular dynamics, condensed matter and surfaces, many-body and quantum ensemble theory, and the interaction of light and molecules.

3 credits, Letter graded (A, A-, B+, etc.)

CHE 528: Statistical Mechanics
Statistical theory of equilibrium systems and rate processes. Ensemble theory, spatial and time correlation functions. Model systems and methods of estimating their properties. Designed to enable the student to use the current literature dealing with application of statistical mechanics to problems in chemistry.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

CHE 530: Physical Chemistry of Macromolecules
An investigation of the gross and fine structures of macromolecules and molecular aggregates in solution as revealed by hydrodynamic behavior (e.g., ultracentrifugation, viscosity), light scattering, spectroscopic properties (e.g., ultraviolet absorption, circular dichroism, Raman, fluorescence, magnetic resonance spectra), and the thermodynamics and kinetics of interaction with small molecules and ions. Theory of conformation changes and phase transitions.

3 credits, Letter graded (A, A-, B+, etc.)

CHE 531: Departmental Research Seminar
Meetings in which first-year graduate students learn about the research activities of the departmental faculty.

Fall, S/U grading

CHE 532: Literature Seminar
Students select and discuss topics from the current literature.

Spring, Letter graded (A, A-, B+, etc.)

CHE 535: Introduction to Computational Structural Biology and Drug Design
This course will provide an introduction to Computational Structural Biology with application to Drug Design. Methods and applications that use computation to model biological systems involved in human disease will be emphasized. The course aims to foster collaborative learning and will consist of presentations by the instructor, guest lecturers, and by course participants with the goal of summarizing key methods, topics, and papers relevant to Computational Structural Biology.

Fall, 0-3 credits, Letter graded (A, A-, B+, etc.)

CHE 536: Molecular Modeling of Biological Molecules
This course is designed for students who wish to gain hands-on experience modeling biological molecules at the atomic level. In conjunction with the individual interests, Molecular Mechanics, Molecular Dynamics, Monte Carlo, Docking (virtual screening), or Quantum Mechanics software packages can be used to study relevant biological system(s). Projects will include setup, execution, and analysis. Course participants will give literature presentations relevant to the simulations being performed and a final project report will be required. Familiarity with UNIX (Linux) is desirable.

Prerequisite: CHE 535 or permission of instructor
Spring, 0-3 credits, Letter graded (A, A-, B+, etc.)

CHE 541: Biomolecular Structure and Analysis

Stony Brook University Graduate Bulletin: www.stonybrook.edu/gradbulletin
The structures of biological macromolecules and the relationship of their structure to biological function are described. Methodology employed to study macromolecules is also discussed. Topics include chemical and physical properties of cell and tissue constituents, including carbohydrates, lipids, nucleic acids, proteins and peptides. Prerequisite: Strong foundation in physical and organic chemistry.  
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

CHE 542: Chemical Biology  
The reactivity and physiological function of biological macromolecules and their cofactors are described at the chemical biochemical level. The emphasis of this course reflects recent advances in chemical biology. Possible topics include catalysts, reaction mechanisms, correlation between three-dimensional structure and reactivity, receptor-ligand interactions in extracellular and intracellular signaling, protein folding in vitro and in vivo.  
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

CHE 543: Chemical Approaches to Biology  
The use of molecular concepts and methodology to solve problems in biology and medicine. The course covers methods to elucidate and control biological systems. Possible topics include chemical genomics, metabolomics, and chemotherapeutics. Prerequisite CHE 542  
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

CHE 546: Professional Skills for Scientists  
Development and refinement of the professional skills used by scientists: An exploration of more sophisticated presentation skills used in oral and poster presentations; incorporation of collaborative problem solving that mimics real world situations, including simple proposal writing; exposure to professional societies and meetings; an exploration of career options and employment resources; tips for resume preparation and interviews. Recommended for upper division undergraduates and masters students.  
2 credits, Letter graded (A, A-, B+, etc.)

CHE 590: M.S. Term Paper  
Independent study leading to a term paper on a selected topic in chemistry, chemical applications, or chemical pedagogy. Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)

CHE 591: Chemistry in Society  
Includes current trends in chemical research and the influence of chemistry in areas such as the environment and technology. Topics of local interest and the conflicting demands placed on technology will be integrated into the course. Offered in Fall.  
3 credits, Letter graded (A, A-, B+, etc.)

CHE 593: Chemical Demonstrations  
The design and implementation of demonstrations to illustrate modern concepts of chemistry.  
3 credits, Letter graded (A, A-, B+, etc.)

CHE 595: Scientific Computing  
The basic methods of numerical analysis as well as the design of computer programs that use them are discussed within the framework of solving a variety of exciting problems chosen from all areas of science. The presentation makes extensive use of powerful scientific computational environments, such as Mathematica and Matlab, but guidance to other scientific high-level computer languages is also provided. No previous knowledge of computer programming is assumed.  
2 credits, Letter graded (A, A-, B+, etc.)

CHE 598: Professional Masters Internship  
Participation in private corporations, public agencies, or non-profit institutions for research and other experiential training activities related to the completion of a Master term paper. Students will be required to have a faculty coordinator as well as a contact in the outside organization, to participate with them in regular consultations on the project, and to successfully complete CHE 590. Prerequisites: Permission of Masters program director.  
Fall, 0-12 credits, S/U grading May be repeated for credit.

CHE 599: Research  
Fall, 1-12 credits, S/U grading May be repeated for credit.

CHE 602: Special Topics in Physical Organic Chemistry  
The subject matter varies depending on interests of students and staff. It may cover such areas as photochemistry, theoretical organic chemistry, and the chemistry of unstable intermediates; the emphasis is on fundamental considerations and recent developments.  
1-12 credits, Letter graded (A, A-, B+, etc.) May be repeated for credit.

CHE 603: Special Topics in Bioorganic Chemistry  
The subject matter varies depending on interests of students and faculty. Possible topics include asymmetric synthesis and natural product synthesis.  
Fall, 1-3 credits, Letter graded (A, A-, B+, etc.) May be repeated for credit.

CHE 606: Special Topics in Synthetic Chemistry  
May be repeated for credit.

CHE 607: Modern Drug Design & Delivery  
A seminar course covering modern aspects and approaches to drug design. This course combines presentations by faculty and by industry representatives to provide a cross-disciplinary view of the development of pharmaceuticals.  
Fall, 1-3 credits, Letter graded (A, A-, B+, etc.) May be repeated for credit.

CHE 610: Practicum in Teaching  
Practice instruction in chemistry at the undergraduate level, carried out under faculty orientation and supervision. A minimum of two semesters of CHE 610 or 611 is required of all candidates for graduate research degrees in chemistry, unless explicitly waived by the chairperson.  
Fall and Spring, 1-3 credits, Letter graded (A, A-, B+, etc.) May be repeated for credit.

CHE 611: Practicum in Teaching  
Practice instruction in chemistry at the undergraduate level, carried out under faculty orientation and supervision. A minimum of two semesters of CHE 610 or 611 is required of all candidates for graduate research degrees in chemistry, unless explicitly waived by the chairperson.  
Fall and Spring, Letter graded (A, A-, B+, etc.) May be repeated for credit.

CHE 619: Critical Readings of Current Topics in Chemistry  
Recent research papers from the literature will be analyzed in depth. These papers may originate from the inorganic, organic, physical, and/or biochemical literature. The exact topic
of the course is announced in advance. Fall and Spring
0-3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

CHE 625: Molecular Structure and Crystallography
Experimental methods in the determination of molecular structure. The emphasis is on the
determination of structure in the solid state, particularly by X-ray crystallography. Students complete a single-crystal molecular structure
determination using modern diffractometer techniques.
3 credits, Letter graded (A, A-, B+, etc.)

CHE 641: Organometallic Chemistry
A systematic presentation of the chemistry of organometallic compounds, particularly
those of the transition metals. Topics include structure, bonding, reaction mechanisms, synthesis, and applications in catalysis and
organic synthesis.
3 credits, Letter graded (A, A-, B+, etc.)

CHE 682: Special Topics in Inorganic Chemistry
Subject matter varies, depending on interests of students and staff, but covers recent
developments in inorganic chemistry.
0-3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

CHE 683: Special Topics in Physical Chemistry
Subject matter varies, depending on interests of students and staff, but covers recent
developments and advanced topics in physical chemistry.
3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

CHE 690: Internship in Dissertation-Related Research
Supervised curricular training in dissertation-related research.
Prerequisite: For full-time: Summer session or advancement to candidacy; Permission of Graduate Prog. Dir.,
Fall and Spring, 1-3 credits, S/U grading
May be repeated for credit.

CHE 693: Physical Chemistry Seminar
Fall and Spring, 0-12 credits, S/U grading
May be repeated for credit.

CHE 694: Biological Chemistry Seminar
Fall and Spring, 0-12 credits, S/U grading
May be repeated for credit.

CHE 695: Inorganic Chemistry Seminar
Fall and Spring, 0-12 credits, S/U grading
May be repeated for credit.

CHE 696: Organic Chemistry Seminar
Fall and Spring, 0-12 credits, S/U grading
May be repeated for credit.

CHE 698: Colloquium
Fall and Spring, 0-12 credits, S/U grading
May be repeated for credit.

CHE 699: Dissertation Research on Campus
Prerequisite: Must be advanced to candidacy (G5). Major portion of research must be done on SBU campus, at Cold Spring Harbor, or at the Brookhaven National Lab.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

CHE 700: Dissertation Research Off Campus - Domestic
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place off-campus, but in the United States and/or U.S. provinces. Please note, Brookhaven National Labs and the Cold Spring Harbor Lab are considered on-campus. All international students must enroll in one of the graduate student insurance plans and should be advised by an International Advisor.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

CHE 701: Dissertation Research Off Campus - International
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place outside of the United States and/or U.S. provinces. Domestic students have the option of the health plan and may also enroll in MEDEX. International students who are in their home country are not covered by mandatory health plan and must contact the Insurance Office for the insurance charge to be removed. International students who are not in their home country are charged for the mandatory health insurance. If they are to be covered by another insurance plan they must file a waiver be second week of classes. The charge will only be removed if other plan is deemed comparable.
All international students must received clearance from an International Advisor.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

CHE 800: SUMMER RESEARCH
May be repeated for credit.

CLT

Comparative Literature

CLT 501: Theory and Method of Literary and Cultural Analysis
This course engages tools necessary for advanced study in both comparative literature and cultural studies. In addition to presenting brief histories of the disciplines, the course will introduce essential topics such as research methodologies, genre study, cultural practices and production, canon formation, and the theoretical traditions central to contemporary literary and cultural study.
Offered Fall/ Spring, 3 credits, Letter graded (A, A-, B+, etc.)

CLT 501: Contemporary Views of Literary and Cultural Studies
This course will examine the special attention recent critical debates have paid to the cross-disciplinary interaction of literary and cultural studies.
Offered Fall/ Spring, 3 credits, Letter graded (A, A-, B+, etc.)

CLT 509: History of Literary Criticism
A history of literary theory from classical Greece to Freud.
Offered Fall/ Spring, 3 credits, Letter graded (A, A-, B+, etc.)

CLT 597: Directed Readings for M.A. Students
A student and faculty member agree on a corpus of texts to read and discuss at weekly
or biweekly meetings. The reading list must be filed with the program's form before the add/drop period ends. May be repeated for credit.
Fall and Spring, 1-3 credits, S/U grading
May be repeated for credit.

CLT 599: Independent Study
A student and faculty member agree on a topic not offered in any seminars and a reading
list to study at weekly or biweekly meetings. A final research paper or major annotated bibliography will be required. The syllabus
must be filed with the program's form before the add/drop period ends. May be repeated for credit.
Only three credits of Independent Study can be counted toward the M.A. requirements, and a maximum of six toward the Ph.D
Fall and Spring, 1-3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

CLT 600: Seminar in Stylistics
Changing topics in the study of stylistic and structural elements of the literary text.
3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

CLT 601: Seminar in Literary and Cultural Theory
Changing topics in the specialized examinations of recent or historical trends such as semiotics, Marxism, reader-response, psychoanalysis, hermeneutics, deconstruction.
3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

CLT 602: Interdisciplinary Seminar
Specific problems in the relations between literature and other disciplines.
3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

CLT 603: Comparative Studies in Literary History
Changing topics in the study of literary periods and styles.
3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

CLT 604: Comparative Studies in Genre
Changing topics in the study of the history and theory of literary genres.
3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

CLT 605: The Experience of Speech in Literature and Psychoanalysis: Marcel Proust
By reading In Search of Lost Time (Remembrance of Things Past) in light of the Proustian experience of France's literary but also political history, and with regard to Freud's work on sublimation, this seminar proposes to raise the question: Is literature still possible as an experience today?
Co-requisite: Students must co-enroll in 1.5 credits of CLT directed readings (or other) Spring, 1.5 credits, Letter graded (A, A-, B+, etc.)

CLT 607: Major Authors in Comparative Context
Critical and comparative examination of two or more major figures from different literary or other aesthetic traditions. Recent topics have included "Kristeva", Dostoevsky and the West", and "European Realisms"
3 credits, Letter graded (A, A-, B+, etc.)

CLT 608: Cross-Cultural Perspectives
Key topics in genre, literary criticism, and methodology from a cross-cultural perspective. Emphasis will be placed on an examination of differences as well as similarities. Presuppositions of specific literary traditions will be questioned within the broader perspectives of philosophical and religious valences.
3 credits, Letter graded (A, A-, B+, etc.)

CLT 609: Topics in Cultural Theory
Emphasis on diverse specialist areas in cultural and critical theory. Course content will vary depending upon instruction.
Offered Fall/ Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

CLT 610: Cultural Studies Research Seminar
In addition to readings on issues, debates, and problems within the profession and field of Cultural Studies students will develop research for publication while engaging with practices of professionalization.
Offered Fall/ Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated 2 times FOR credit.

CLT 690: Directed Readings for Doctoral Candidates
A student and faculty member agree on a corpus of texts to read and discuss at weekly or biweekly meetings. The reading list must be filed with the program's form before the add/drop period ends. May be repeated for credit.
Fall and Spring, 1-12 credits, S/U grading
May be repeated for credit.

CLT 696: Self-Directed Readings
For doctoral students who have completed all course requirements and wish to dedicate themselves to full or part-time preparation for the Comprehensive Examination.
Fall and Spring, 3-9 credits, S/U grading
May be repeated 6 times FOR credit.

CLT 698: Practicum in Teaching
The course is divided into two parts: one half is normally given in the fall, one in the spring. The first part deals primarily with matters of pedagogy. The second part is designed to help students plan their own undergraduate courses. The practicum is required of all students during their first year.
1-3 credits, S/U grading

CLT 699: Dissertation Research on Campus
Prerequisite: Advancement to candidacy (G5).
A portion of dissertation research must take place on SBU campus.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

CLT 700: Dissertation Research off Campus - Domestic
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place off-campus, but in the United States and/or U.S. provinces. Please note, Brookhaven National Labs and the Cold Spring Harbor Lab are considered on-campus. All international students must enroll in one of the graduate student insurance plans and should be advised by an International Advisor.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

CLT 701: Dissertation Research off Campus - International
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place outside of the United States and/or U.S. provinces. Domestic students have the option of the health plan and may also enroll in MEDEX. International students who are in their home country are not covered by mandatory health plan and must contact the Insurance Office for the insurance charge to be removed. International students who are not in their home country are charged for the mandatory health insurance. If they are to be covered by another insurance plan they must file a waiver be second week of classes. The charge will only be removed if other plan is deemed comparable.
All international students must received clearance from an International Advisor.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

CLT 800: SUMMER RESEARCH
May be repeated for credit.

CLT 850: SUMMER TEACHING
May be repeated for credit.

CSE

Computer Science

CSE 500: Patterns in Programming
This course provides an introduction to programming patterns often encountered
in software systems. It presents the role of patterns and introduces patterns used by computer scientists and software engineers. The course covers a wide breadth of program types including user interfaces, numerical computing, event handling, and use of varied data structures. Patterns developed during the course are predominantly object-oriented patterns, including factory, facade, and many others.

3 credits, Letter graded (A, A-, B+, etc.)

CSE 502: Computer Architecture
Topics covered include instruction pipelines and memory caches to improve computer performance; instruction-level parallelism; machines: superscalar versus VLIW; cache and main memory hierarchy design tradeoffs; compiler optimizations to speed pipelines; low-power computer system design: processor, OS, and compiler support; graphics, DSP, and media processor design; disk I/O system design; interconnections and networking; and introduction to parallel architecture. Advanced topics include asynchronous microprocessors; FPGA-based reconfigurable computing; system on a chip; embedded processors; intelligent RAM and superconducting computers.
Prerequisite: CSE 345
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

CSE 504: Compiler Design
This course covers advanced topics in compilation, including memory management, dataflow analysis, code optimization, just-in-time compilation, and selected topics from compilation of object-oriented and declarative languages.
Prerequisites: CSE 304 and CSE 307
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

CSE 505: Computing with Logic
The course explores logic-based computing and logic programming. It includes an introduction to programming in logic, covering basic techniques for solving problems in a logic programming system. Particular attention will be paid to user interface issues and how a logic system can provide a useful computing environment. The course covers implementation issues, emphasizing how a logic programming system generalizes both traditional programming language systems and traditional database systems.
3 credits, Letter graded (A, A-, B+, etc.)

CSE 506: Operating Systems
This course is an in-depth study of important concepts and techniques found in modern computer operating systems. An undergraduate course in operating systems is a prerequisite. The course focuses on in-depth study of such important issues as virtual memory, file systems, networking, and multiprocessor support, with an eye to recent directions in these areas. Textbook readings are supplemented where appropriate by papers from the research literature. An important part of the course is the case study of an actual operating system. Students study the source code for this operating system and do programming exercises and projects that involve modifying the operating system and measuring its performance.
Prerequisite: CSE 306
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

CSE 507: Introduction to Computational Linguistics
Overview of computational approaches to language use. Core topics include mathematical and logical foundations, syntax, semantics and pragmatics. Special topics may include speech processing, dialog system machine translation information extraction and information retrieval. Statistical and traditional approaches are included. Students will develop familiarity with the literature and tools of the field.
Prerequisites: CSE 537; CSE 541 recommended
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

CSE 508: Network Security
Principles and practice of Computer Network Security. Cryptography, authentication protocols, public key infrastructures, IP/www/E-commerce security, firewalls, VPN, and intrusion detection. Limited to CSE graduate students. Others; permission of instructor. Prerequisite: CSE/ISE 310, or CSE 346 or equivalent.
3 credits, Letter graded (A, A-, B+, etc.)

CSE 509: Computer System Security
3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

CSE 510: Hybrid Systems
Hybrid systems combine discrete state-machines and continuous differential equations and have been used as models of a large number of applications in areas such as real-time software, embedded systems, robotics, mechatronics, aeronautics, process control and biological systems. The course will cover the state-of-the-art modeling, design and analysis of hybrid systems.
3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

CSE 511: Brain and Memory Modeling
An introduction to brain modeling. Neuroscience topics include major brain structures, constituent glia and neurons, and synapses connecting neurons; how excited neurons send ionic firing spikes to other neurons; synapse changes during learning and forgetting; connection structures for stable ionic activity in neural networks; and distributed firing patterns underlying memory, perception, and thought. Computing topics include efficient methods for modeling electrical activity in single neurons using NEURON and in networks of millions of neurons using discrete event simulation. Participants will code simulations OR use neuroscience experience to refine brain models.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

CSE 515: Introduction to Transaction Processing Systems
Discusses transaction processing systems. Topics covered include models of transactions, including nested transactions and workflow; architectures of transaction processing systems, including client-server, two-tiered and three-tiered architectures; concurrency controls for conventional and relational databases including two-phase locking and the SQL isolation levels; logging and recovery; distributed transactions including the two-phase commit protocol; replication; Internet commerce, including encryption, the SSL and SET protocols, goods atomicity, and electronic cash. Fall
3 credits, Letter graded (A, A-, B+, etc.)

CSE 522: Special Project in Computer Science
Project in a sub-discipline of Computer Science, including but not limited to, computer architecture, operating systems, programming languages, compilers, artificial intelligence, networking, computer graphics, data mining, databases, computer vision, visualization, computer security, mobile computing, parallel processing, logic programming, hybrid systems, simulation and modeling, computational biology, and multimedia.
CSE 523: Advanced Project in Computer Science I
First part of an advanced project in computer science that will extend over two semesters. The student starts the project in one semester by registering for CSE523 and completes the project in a following semester by registering for CSE524. CSE523/524 sequence must be on the same project under the direction of the same advisor. The student must identify a faculty advisor before registering.

3 credits, Letter graded (A, A-, B+, etc.)

CSE 524: Advanced Project in Computer Science II
Second part of the advanced project undertaken in CSE523. Must be on the same project and under the same faculty advisor as CSE524.

3 credits, Letter graded (A, A-, B+, etc.)

CSE 525: Introduction to Robotics
This course introduces fundamental concepts in Robotics. In the first half of the course, basic concepts will be discussed, including coordinate transformation, kinematics, dynamics. Laplace transforms, equations of motion, feedback and feedforward control, and trajectory planning. These topics will be exemplified with Matlab/Simulink simulation studies. The second half of the course will focus on applying the knowledge from the initial lectures to various motor systems, including manipulators, artificial eye systems, locomotory systems, and mobile robotics. There will be homeworks for Matlab/Simulink and a final project, a midterm and a final.

3 credits, Letter graded (A, A-, B+, etc.)

CSE 526: Principles of Programming Languages
Discusses programming language concepts and design, with emphasis on abstraction mechanisms. Topics include language paradigms (procedural, object-oriented, functional, and logic), language concepts (values, bindings, types, modules), and foundations (lambda calculus, denotational semantics). Examples will be drawn from several representative languages, such as C, Java, Standard ML, and Prolog.

Prerequisite: CSE 307
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

CSE 527: Introduction to Computer Vision
Introduction to basic concepts in computer vision. Low level image analysis, image formation, edge detection, segmentation. Image transformations for image synthesis methods for 3D scene reconstruction, motion analysis, object recognition.

3 credits, Letter graded (A, A-, B+, etc.)

CSE 528: Computer Graphics
This course emphasizes a hands-on approach to the use of computer graphics. The topics covered include models, picture description, and interaction: e windowing, clipping, panning, and zooming; geometrical transformations in 2D and 3D; algorithms for raster displays (scan-line conversion, polygon fill, polygon clipping, etc.); hidden line and hidden surface removal, shading models; user interaction. The students will implement a substantial graphics application program.

Prerequisite: CSE 328
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

CSE 529: Simulation and Modeling
A comprehensive course in formulation, implementation, and application of simulation models. Topics include data structures, simulation languages, statistical analysis, pseudo-random number generation, and design of simulation experiments. Students apply simulation modeling methods to problems of their own design. This course is offered as CSE 529, AMS 553 and MBA 553.

3 credits, Letter graded (A, A-, B+, etc.)

CSE 530: GEOMETRIC FOUNDATNS
This course will focus on mathematical tools, geometric modeling techniques, and fundamental algorithms that are relevant to graphics, visualization, and other visual computing areas. The goal is to provide graduate students with a comprehensive knowledge on geometric concepts and demonstrate the significance of these mathematical tools and geometric algorithms in graphics and relevant areas. Course topics include geometric algorithms for both polygonal and curved objects, theory of parametric and implicit representations, modeling methods of curves, surfaces, and solids, in-depth spline theory, rudiments of wavelet theory and multi-resolution shape representations, differential geometry fundamentals, and other sophisticated topics and latest advances in the field.

Prerequisites: CSE 328 and CSE 332
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

CSE 532: Theory of Database Systems
The course will cover advanced topics in modern database systems, including object-oriented databases, rule-based databases, temporal and active databases, parallel and distributed databases, distributed object model, data mining, online analytical processing, data warehousing, multimedia databases.

Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)
physically distributed user-interfaces, parallelism and user-interfaces, virtual reality. A substantial project requiring the design, implementation, and evaluation of a user-interface will be required.

3 credits, Letter graded (A, A-, B+, etc.)

CSE 537: Artificial Intelligence
A comprehensive introduction to the problems of artificial intelligence and techniques for attacking them. Topics include problem representation, problem-solving methods, search, pattern recognition, natural language processing, learning, expert systems, AI programming languages and techniques. Covers both theoretical methods and practical implementations.

Prerequisites: MAT 371 or CSE 541
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

CSE 540: Theory of Computation
Topics include models of computation: finite-state machines, stack machines, Turing machines, Church's thesis; computability theory: halting problem and unsolvability, introductory recursion theory; complexity theory: complexity measures, time and space hierarchy, NP-complete problems.

Prerequisite: CSE 303
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

CSE 541: Logic in Computer Science
A survey of the logical foundations of mathematics and the relationships to computer science; development of propositional calculus and quantification theory; the notions of a proof and of a model; the completeness theorem.

Pre- or co-requisite: MAT 313 and CSE 213
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

CSE 542: Speech Processing
Introductory speech processing course, surveying speech analysis, speech recognition and speech synthesis. Students will develop familiarity with speech processing tools (PRAAT, HTK, Festival.)

Prerequisite: CSE 526 or permission of instructor
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

CSE 547: Discrete Mathematics
This course introduces such mathematical tools as summations, number theory, binomial coefficients, generating functions, recurrence relations, discrete probability, asymptotics, combinatorics, and graph theory for use in algorithmic and combinatorial analysis. This course is offered as both CSE 547 and AMS 547.

Prerequisite for CSE 547: AMS 301
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

CSE 548: Analysis of Algorithms
Techniques for designing efficient algorithms, including choice of data structures, recursion, branch and bound, divide and conquer, and dynamic programming. Complexity analysis of searching, sorting, matrix multiplication, and graph algorithms. Standard NP-complete problems and polynomial transformation techniques. This course is offered as both AMS 542 and CSE 548.

Prerequisite for CSE 548: CSE 373 recommended
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

CSE 549: Computational Biology
This course focuses on current problems in computational biology and bioinformatics. Our emphasis will be algorithmic, on discovering appropriate combinatorial algorithm problems and the techniques to solve them. Primary topics will include DNA sequence assembly, DNA/protein sequence assembly, DNA/protein sequence comparison, hybridization array analysis, RNA and protein folding, and phylogenetic trees.

Prerequisite: CSE 373 or CSE 548; or consent of instructor
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

CSE 550: Computational Geometry
Study of the fundamental algorithmic problems associated with geometric computations, including convex hulls, Voronoi diagrams, triangulation, intersection, range queries, visibility, arrangements, and motion planning for robotics. Algorithmic methods include plane sweep, incremental insertion, randomization, divide-and-conquer, etc. This course is offered as both AMS 545 and CSE 555.

Prerequisite for CSE 555: CSE 373 or CSE 548
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

CSE 554: Visualization
The course emphasizes a hands-on approach to scientific visualization. Topics include traditional visualization, the visualization process, visual perception, basic graphics and imaging concepts, volume and surface visualization, volume graphics, visualization of sampled and computed data case studies, and visualization systems.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

CSE 570: Wireless and Mobile Networks

Offered
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

CSE 580: Topics in Computer Science
An advanced lecture course on a new topic in computer science. The course is primarily designed for M.S. students, but can be taken by Ph.D. students as well.

3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

CSE 581: Topics in Computer Science
An advanced lecture course on a new topic in computer science. The course is primarily designed for M.S. students, but can be taken by Ph.D. students as well.

3 credits, May be repeated for credit.

CSE 582: Topics in Computer Science
An advanced lecture course on a new topic in computer science. The course is primarily designed for M.S. students, but can be taken by Ph.D. students as well.

3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

CSE 587: Proficiency Requirement in Computer Science
Students can get credit for a 300-level undergraduate course by registering for CSE 587. The syllabus of the undergraduate course must specify additional work that graduate students must do in order to pass the course. Graduate students taking an undergraduate course under CSE 587 number must be graded separately from the undergraduate students. See Graduate Student Handbook for restrictions on the use of this course.

Fall and Spring, 2 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

CSE 590: Topics in Computer Science
An advanced lecture course on a new topic in computer science. The course is primarily designed for M.S. students, but can be taken by Ph.D. students as well. Semester supplements to this Bulletin contain specific description when course is offered. May be repeated for credit as the topic changes, but cannot be used more than twice to satisfy CSE major requirements for M.S. Limited to CSE graduate students; others, permission of instructor.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

CSE 591: Topics in Computer Science
An advanced lecture course on a new topic in computer science. The course is primarily designed for M.S. students, but can be taken by Ph.D. students as well. Semester supplements to this Bulletin contain specific description when course is offered. May be repeated for credit as the topic changes, but cannot be used more than twice to satisfy CSE major requirements for M.S. Limited to CSE graduate students; others, permission of instructor.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

CSE 592: Advanced Topics in Computer Science
An advanced lecture course on a new topic in computer science. The course is primarily designed for M.S. students, but can be taken by Ph.D. students as well. Semester supplements to this Bulletin contain specific description when course is offered. May be repeated for credit as the topic changes, but cannot be used more than twice to satisfy CSE major requirements for M.S. Limited to CSE graduate students; others, permission of instructor.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

CSE 593: Independent Study in Computer Science
Students can register for this course in order to conduct or participate in a project under the supervision of a Computer Science faculty member. The student must prepare a description of the project or the course to be taken and submit it before the add/drop deadline to the project sponsor. The description will reside in the student's file. Both M.S. and Ph.D. students can take this course. This course cannot be taken as part of M.S. Thesis research --- use CSE 599 in this case. Ph.D. students take CSE 593 for any kind of research or project work prior to advancement to candidacy (G5 status). After the advancement, CSE 699 should be used to conduct Dissertation Research. Prerequisite: Limited to CSE Graduate Students; others, permission of instructor.

Spring, 1-9 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

CSE 594: Advanced Topics in Computer Science
An advanced lecture course on a new topic in computer science. This course is primarily designed for M.S. students, but can be taken by Ph.D. students as well. Semester supplements to this Bulletin contain specific description when course is offered. May be repeated as the topic changes, but cannot be used more than twice to satisfy the CSE major requirements for the M.S.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

CSE 595: Topics in Computer Science
An advanced lecture course on a new topic in computer science. This course is primarily designed for M.S. students, but can be taken by Ph.D. students as well. Semester supplements to this Bulletin contain specific description when course is offered. May be repeated for credit as the topic changes, but cannot be used more than twice to satisfy the CSE major requirements for the M.S.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

CSE 596: M.S. Internship in Research
Participation in private corporations, public agencies, or non-profit institutions. Students will be required to have a faculty coordinator as well as a contact in the outside organization to participate with them in regular consultations on the project, and to submit a final report to both. At most 1 credit can be accepted towards the M.S. degree.

Prerequisite: Permission of graduate program director.
Fall and Spring, 1-3 credits, S/U grading
May be repeated for credit.

CSE 599: M.S. Thesis Research
This course can be used only for M.S. Thesis research; non-thesis research should be done under the designation of CSE 593: Independent Study. M.S. students who wish to enroll in CSE 599 for any number of credits must prepare a 1-2 page description of the work to be completed. The description must be approved by the research advisor, signed by both student and advisor, and will reside in the student's file. Amendments to the proposal must be approved by the advisor. Up to 9 credits of CSE 599 can be counted towards the 31 credits that are required for graduation.

Prerequisite: Limited to CSE graduate students; others, permission of instructor.
Fall, 1-12 credits, S/U grading
May be repeated for credit.

CSE 600: Topics in Modern Computer Science
A survey of current computer science research areas and issues. This course comprises lectures by faculty members and visitors, selected readings, and introductory-level research problems.

1 credit, S/U grading
May be repeated for credit.

CSE 601: Advanced Image Processing
Modern approaches to Image Processing, Statistical Image Formation and Image Models, Image Restoration, Reconstruction and Segmentation, Applications to Medical Imaging, Crosslisted with ESE 559
3 credits, Letter graded (A, A-, B+, etc.)

CSE 602: Advanced Computer Architecture
The focus will be on the architectural rather than micro-architectural issues, and a systems approach to computer architecture taking into account the interaction between the architecture and the compiler, operating system, database, and networking. The course starts with superscalar/VLIW processor architecture and proceeds to memory hierarchy, storage systems, network hardware, graphics processor, and database machines. The emphasis will be on hands-on evaluation of architectural ideas, the exploration of software/hardware design trade-offs, and the articulation of experimental procedures and performance analysis. A publication-quality class project will be required.

3 credits, Letter graded (A, A-, B+, etc.)

CSE 605: Performance Evaluation of Computer Systems
The purpose of this course is to provide background and training in understanding and evaluating performance of computer systems, including centralized, distributed, parallel, client/server based systems, and computer communication networks. The goal is to develop a perspective on how the performance of computer systems or networks should be evaluated in order to decide on various design alternatives. The course will include various analytical techniques, mainly based on Markov models.
models and queuing theory, and simulation modeling.

Prerequisites: Limited to CSE graduate students; others permission of instructor.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

May be repeated 2 times FOR credit.

CSE 606: Performance Evaluation of Computer Systems

The purpose of this course is to provide background and training in understanding and evaluating performance of computer systems, including centralized, distributed, parallel, client/server based systems, and computer communication networks. The goal is to develop a perspective on how the performance of computer systems or networks should be evaluated in order to decide on various design alternatives. The course will include various analytical techniques, mainly based on Markov models and queuing theory, and simulation modeling.

Prerequisites: Limited to CSE graduate students; others permission of instructor.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

May be repeated 2 times FOR credit.

CSE 608: Advanced Computer Security

Advanced course on principles and practice of engineering secure information systems. Topics covered include threats and vulnerabilities, counter measures, legal policy issues, risk management and assurance. In-depth coverage of various research problems, which will vary from one offering of the course to another.

Prerequisite: CSE 508 or CSE 509 or permission of instructor.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

May be repeated for credit.

CSE 610: Parallel Computer Architectures

Topics include parallel computer systems; important parallel applications; parallel computation models; interconnection networks; SIMD and MIMD architectures; hybrid architectures; memory management; cache coherence; distributed shared memory; synchronization methods; operating systems; compilers; and programming tools.

3 credits, Letter graded (A, A-, B+, etc.)

CSE 611: Transaction Processing

An advanced course in transaction processing systems covering the latest developments in the area. Topics include stable storage, distributed database systems, commitment protocols, failures, replication and advanced models of transactions.

3 credits, Letter graded (A, A-, B+, etc.)

CSE 612: Advanced Visualization and Volume Graphics

This course discusses advanced concepts in the area of volumetric data modeling and visualization. Topics included are: visual exploration of multi-variate and multi-dimensional datasets on regular and irregular grids, modeling of natural phenomena and simulation of realistic illumination, volumes as magic clay for sculpting and deformation effects, non-photorealistic rendering for illustration and artistic works, information-centric exploration of large datasets and exploitation of hardware for acceleration. The course strives to provide a snapshot on the current state of the art and will be supported mostly by recent research papers. Students will expand on a topic of their choice by completing an individual project.

Limited to CSE graduate students; others permission of instructor. Prerequisites: CSE 564.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

CSE 613: Parallel Programming

Algorithms and technique for programming highly parallel computers. Trends in parallel and distributed computing; shared address space and message passing architectures; design issues for parallel algorithms; converting sequential algorithms into equivalent parallel algorithms; synchronization and data sharing; improving performance of parallel algorithms; interconnection network topologies, routing, and flow control; latency limits on speedup of algorithms by parallel implementations.

3 credits, Letter graded (A, A-, B+, etc.)

CSE 614: Advanced Programming Languages

Selected topics on advanced programming languages technology. Program analysis and transformation, program optimization and program manipulation systems. Very high-level and declarative languages such as sets and relations based languages and deductive and object-oriented languages.

Prerequisite: CSE 526 or CSE 504

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

May be repeated for credit.

CSE 615: Advanced Computer Vision

Survey of methods used for the analysis of images by computer, including computer vision and pattern recognition. Topics to be covered are image formation, image segmentation and edge detection, binary images and shape analysis, shape from shading, motion field and optical flow, surface inference, classification techniques.

3 credits, Letter graded (A, A-, B+, etc.)

CSE 616: Digital Multimedia Systems

In-depth survey of multimedia computing, including media conversion, data compression, multimedia data representation and modeling, authoring techniques, audio and video editing, 2D and 3D animation, media synchronization, distributed multimedia, and advanced application development.

3 credits, Letter graded (A, A-, B+, etc.)

CSE 617: Advanced Topics in Wireless Networks

Advance topics taken from ad hoc wireless networks and sensor networks. Will comprise of lectures, presentations and/or a project.

Prerequisite: Limited to CSE graduate students; others, permission of instructor.

Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)

May be repeated 2 times FOR credit.

CSE 618: Advanced Computer Graphics

Advanced topics in rendering and modeling realistic 3D imagery including texture mapping and synthesis, radiosity, amorphous phenomena, artificial life, and animation. Further contents include introductions to freeform curves and surfaces, volume rendering, and image-based rendering. Limited to CSE graduate students; others, permission of instructor.

3 credits, Letter graded (A, A-, B+, etc.)

May be repeated for credit.

CSE 620: Virtual Reality

Practical issues in the design and implementation of virtual environments. Topics include system requirements, transformations, user-interaction models, human vision models, input/output devices and techniques, tracking systems, augmented reality, and virtual-reality applications. The course will involve a substantial programming project to implement an immersive virtual reality system.

3 credits, Letter graded (A, A-, B+, etc.)

CSE 621: Physics-based Modeling for Visual Computing

A unified approach to various fields such as graphics, visualization, computer-aided geometric design, biomedical imaging, vision, and virtual environment. The course will explore select research topics centered on physics-based modeling methodology and associated computational methods.
for theoretical and practical problems in widespread areas of visual computing. The emphasis will be on geometric and solid modeling, geometric design techniques, wavelets and multi-resolution analysis, deformable models based on mathematical physics, variational analysis, optimization methods, numerical simulation with finite-difference and finite-element algorithms, differential equations for initial-value and boundary-value problems, force-driven interaction with constraints, dynamic sculpting system, and a large variety of applications for visual computing.

3 credits, Letter graded (A, A-, B+, etc.)

**CSE 622: Advanced Database Systems**

This course covers selected topics on the cutting edge of database technology, such as deductive database query languages and systems, object-oriented data models, persistent programming languages, heterogeneous databases, and advanced transaction models.

3 credits, Letter graded (A, A-, B+, etc.)

**CSE 624: Advanced Operating Systems**

This is a survey of modern operating system techniques, especially those needed for distributed operating systems. Topics include network topologies, interprocess communication, failure detection and system recovery, local kernel functions, global network services, location transparency, large network constraints, distributed control algorithms (synchronization, configuration, deadlock detection, and searches), and existing distributed operating systems.

3 credits, Letter graded (A, A-, B+, etc.)

**CSE 625: Advanced Asynchronous Systems**

Formal specification and verification of asynchronous systems. Topics include concurrent programming, process algebras, logics for describing the properties of concurrent systems, and formal semantics of communication.

3 credits, Letter graded (A, A-, B+, etc.)

May be repeated for credit.

**CSE 626: Switching and Routing in Parallel and Distributed Systems**

This course covers various switching and routing issues in parallel and distributed systems. Topics include message switching techniques, design of interconnection networks, permutation, multicast and all-to-all routing in various networking nonblocking, and rearrangeable capability analysis and performance modeling.

3 credits, Letter graded (A, A-, B+, etc.)

**CSE 628: Natural Language Processing**

The course offers computationally-oriented introductions to natural language processing (NLP). The focus is on modern quantitative techniques in NLP: algorithms and statistical approaches to word-level, syntactic, and semantic processing of natural language. The choice of topics includes practically motivated questions in NLP such as (1) can we teach computers to automatically detect authorship of a document? (2) can computers automatically suggest paraphrases (phrases with similar meaning) to help with writing?

Prerequisite: Familiarity with either Artificial Intelligence or Machine Learning is strongly recommended, but not absolutely required. Fall and Spring. 3 credits, Letter graded (A, A-, B+, etc.)

**CSE 630: Theory of Computational Complexity**

Machine-based polynomial-time complexity theory, including nondeterministic computation, probabilistic computation, time and space trade-off, and complexity hierarchy; applications to related areas such as combinatorial algorithms and cryptography.

3 credits, Letter graded (A, A-, B+, etc.)

**CSE 631: Advanced Logic in Computer Science**

The course may include the following: deductive theorem proving (resolution, sequent-style calculi, natural deduction), inductive theorem proving, equational reasoning (rewrite systems), non-classical logics (modal logics, intuitionistic logic).

3 credits, S/U grading

**CSE 633: Computability and Undecidability**

Computability theory based on Turing machines and recursive functions; proof by diagonalization and reducibility; unsolvable problems in set, group, number and language theory; reducibility orderings and degrees of unsolvability; priority methods and Post's problem. Prerequisite: CSE 540 or consent of instructor.

3 credits, Letter graded (A, A-, B+, etc.)

**CSE 634: Data Mining Concepts and Techniques**

Data Mining is a new, promising and flourishing interdisciplinary field drawing work from areas including database technology, artificial intelligence, machine learning, pattern recognition, high-performance computing, and data visualization. It focuses on issues relating to the feasibility, usefulness, efficiency and scalability of techniques for automated extraction of patterns representing knowledge stored in large databases, warehouses, and other massive information repositories.

The course gives a broad, yet in-depth overview of the field of data mining and presents one or two techniques in rigorous detail.

3 credits, Letter graded (A, A-, B+, etc.)

**CSE 636: Analysis and Synthesis of Computer Communication Networks**

Topics include analysis of message queuing and buffering in computer networks; survey of OSI layered architecture; network topology; local, metropolitan, and wide area networks; circuit and packet switching techniques; high-speed and lightwave network concepts: Synchronous Optical Network (SONET), Fiber Distributed Data Interface (FDDI), Distributed Queue Dual Bus (DQDB-QPSX), Integrated Services Digital Networks (ISDN), Broadband-ISDN, and Asynchronous Transfer Mode (ATM).

3 credits, Letter graded (A, A-, B+, etc.)

**CSE 637: Program Semantics and Verification**

Topics include formal approaches to defining semantics of programming languages: denotational, operational, axiomatic, and transformational semantics; formal systems for program verification; logics of program, type theory, lambda calculus; further topics selected from term rewriting approach to proving properties of data types, and semantics and verification of languages with concurrent and parallel constructs.

3 credits, Letter graded (A, A-, B+, etc.)

**CSE 638: Advanced Algorithms**

This is an advanced course in the design and analysis of combinatorial algorithms, focusing on recent material and special topics, including randomized algorithms, approximation algorithms for NP-complete problems, string algorithms, amortized analysis of data structures, and heuristic methods such as simulated annealing. Material will be selected to have little or no overlap with traditional introductory algorithms courses.

3 credits, Letter graded (A, A-, B+, etc.)

**CSE 640: Seminar in Theory of Computing**

Stony Brook University Graduate Bulletin: www.stonybrook.edu/gradbulletin
GRADUATE COURSE DESCRIPTIONS

CSE 641: Seminar in Logic in Computer Science
    This seminar course will draw topics from mobile and wireless networks of current interest. The main focus will be multi-hop wireless networks. It will cover topics on mobile routing, multiple access and transport protocols for such networks. It will also cover topics from micro-mobility architectures and pervasive computing.

CSE 642: Seminar in Algorithms

CSE 643: Seminar in Concurrency

CSE 644: Seminar in Databases
    Prerequisites: Limited to CSE graduate students; others permission of instructor.
    Fall, 1 credit, S/U grading
    May be repeated 2 times FOR credit.

CSE 645: Seminar in Languages

CSE 646: Seminar in Artificial Intelligence

CSE 647: Seminar in Image Processing

CSE 648: Seminar in Graphics

CSE 649: Seminar in Operating Systems

CSE 650: Seminar in Architecture

CSE 651: Seminar in Applications

CSE 652: Seminar in User Interfaces

CSE 653: Seminar in Virtual Reality

CSE 654: Seminar in Simulation

CSE 655: Seminar in Cryptography

CSE 656: Seminar in Medical Imaging

CSE 657: Seminar in Design Analysis
    Methods for constructing reliable and efficient computer systems. Topics include: modeling and specification, analysis and verification, design and optimization, code generation, simulation and testing. Tool support. Applications and case studies.
    Prerequisite: Limited to CSE graduate students; others need instructor consent
    Fall, 1 credit, S/U grading
    May be repeated for credit.

CSE 658: Seminar on Mobile and Wireless Networking

CSE 659: Seminar in Computer Security
    Seminar course, covering various research problems in computer security.

CSE 660: Seminar in Media Networks
    Graduate seminar that covers recent work on multimedia and networks.

CSE 661: Seminar in Data Privacy
    Current research in Data Privacy.
    Limited to CSE graduate students; others, permission of instructor.
    Spring, 1 credit, S/U grading
    May be repeated for credit.

CSE 662: Seminar in Applied Cryptography
    May be repeated for credit.

CSE 663: Seminar in Computer Vision

CSE 664: Seminar in Logic in Computer Science

CSE 665: Seminar in Theory of Computing

CSE 666: Seminar in Logic in Computer Science

CSE 667: Seminar in Algorithms

CSE 668: Seminar in Concurrency

CSE 669: Seminar in Databases

CSE 670: Seminar in Languages

CSE 671: Seminar in Artificial Intelligence

CSE 672: Seminar in Image Processing

CSE 673: Seminar in Graphics

CSE 674: Special Topics in Operating Systems

CSE 675: Special Topics in Architecture

CSE 676: Special Topics in Applications

CSE 677: Special Topics in User Interfaces

CSE 678: Special Topics in Virtual Reality

CSE 679: Special Topics in Visualization

CSE 680: Special Topics on Modeling and Simulation
    This is an advanced modeling and simulation course on selected research topics. This application-oriented course tries to address issues of modeling and simulation from graphics, animation, CAD/CAM, medicine, artificial life, and virtual environments. Primary areas covered by this course include visual modeling, mathematical methods for geometry, shape design technology, computational physics for simulation, and scientific computing techniques. New topics will be added each year to reflect the latest state-of-the-art. Prerequisite: graphics/visualization background or permission of the instructor.
    Fall, 2 credits, Letter graded (A, A-, B+, etc.)

CSE 681: Special Topics in Computer Vision
    Advanced research topics course.
    Prerequisite: Limited to CSE graduate students; others need instructor consent
    Fall, 2 credits, Letter graded (A, A-, B+, etc.)
    May be repeated for credit.

CSE 682: Special Topics in Design Analysis
    Methods for constructing reliable and efficient computer systems. Topics include: modeling and specification, analysis and verification, design and optimization, code generation, simulation and testing. Tool support. Applications and case studies.
    Prerequisite: Limited to CSE graduate students; others, instructor consent
    Fall, 2 credits, Letter graded (A, A-, B+, etc.)
    May be repeated for credit.
CSE 683: Special Topics on Mobile and Wireless Networking
This course will draw topics from mobile and wireless networks of current interest. The main focus will be multi-hop wireless networks. It will cover topics on mobile routing, multiple access and transport protocols for such networks. It will also cover topics from micromobility architectures and pervasive computing.
Prerequisites: Limited to CSE graduate students; others permission of instructor.
Fall and Spring, 2 credits, Letter graded (A, A-, B+, etc.)
May be repeated 2 times FOR credit.

CSE 684: Special Topics in Computer Security
Special topics course, covering selected research areas in computer security.
Spring, 2 credits, Letter graded (A, A-, B+, etc.)
May be repeated 2 times FOR credit.

CSE 686: Special Topics in Data Privacy
Advanced research topics course.
Limited to CSE graduate students; others, permission of instructor.
Spring, 2 credits, S/U grading
May be repeated for credit.

CSE 687: Special Topics in Applied Cryptography
May be repeated for credit.

CSE 690: Advanced Topics in Computer Science
An advanced lecture course on a new topic in computer science. This course is primarily designed for Ph.D. students, but can be taken by M.S. students as well. Semester supplements to this Bulletin contain specific description when course is offered. May be repeated for credit as the topic changes, but cannot be used more than twice to satisfy CSE major requirements for M.S. Limited to CSE graduate students; others permission of instructor.
Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

CSE 692: Advanced Topics in Computer Science
An advanced lecture course on a new topic in computer science. This course is primarily designed for Ph.D. students, but can be taken by M.S. students as well. Semester supplements to this Bulletin contain specific description when course is offered. May be repeated for credit as the topic changes, but cannot be used more than twice to satisfy CSE major requirements for M.S. Limited to CSE graduate students; others permission of instructor.
Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

CSE 699: Dissertation Research on Campus - International
This course is normally taken by advanced Ph.D. students when they conduct research towards their thesis. Only Ph.D. students who have been advanced to candidacy (G5 status) can take this course. Students who have the G3 and G4 status and participate in a research project with their advisor can register for CSE 593: Independent Study.
Prerequisite: Must be advanced to candidacy (G5). Major portion of research must take place outside of the United States and/or U.S. provinces. Please note, Brookhaven National Labs and the Cold Spring Harbor Lab are considered on-campus. All international students must enroll in one of the graduate student insurance plans and should be advised by an International Advisor.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

CSE 701: Dissertation Research off Campus - International
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place outside of the United States and/or U.S. provinces. Domestic students have the option of the health plan and may also enroll in MEDEX. International students who are in their home country are not covered by mandatory health plan and must contact the Insurance Office for the insurance charge to be removed. International students who are not in their home country are charged for the mandatory health insurance. If they are to be covered by another insurance plan they must file a waiver be second week of classes. The charge will only be removed if other plan is deemed comparable.
All international students must received clearance from an International Advisor.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

CSE 800: FT SUMMER RESEARCH
May be repeated for credit.
GRADUATE COURSE DESCRIPTIONS

What standards of evidence and scientific explanations, processes, and conventions are used in science? What philosophical, social, ethical, and historical perspectives are important in understanding science?

Offered
Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)

CST 620: Science Teacher Education
Introduction to the historical, philosophical and pedagogical issues surrounding science teacher education. Introduction to the nature of the research that has been conducted on teacher education in the past and current trends.

Offered
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

CST 630: Science Education Research Seminar
Introduction to the major theoretical frameworks and paradigms in societal issues (gender, culture, and diversity). Students will be required to critique research papers in the field and will conduct a literature review in their general thesis area.

Offered
Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)

CST 640: Directed Study in Science Education
In their fifth semester students will individually complete a directed study with a faculty advisor. The intent of this course is to prepare the students for the doctoral qualifying examination and assist them in refining their research topics.

Offered
Fall and Spring, 3-9 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

CST 597: Directed Readings for M.A. Students
A student and faculty member agree on a corpus of texts to read and discuss at weekly or biweekly meetings. The reading list must be filed with the program's form before the add/drop period ends. May be repeated for credit.

Fall and Spring, 1-3 credits, S/U grading

May be repeated for credit.

CST 599: Independent Study
A student and faculty member agree on a topic not offered in any seminars and a reading list to study at weekly or biweekly meetings. A final research paper or major annotated bibliography will be required. The syllabus must be filed with the program's form before the add/drop period ends. May be repeated for credit.

Only three credits of Independent Study can be counted toward the M.A. requirements, and a maximum of six toward the PhD.

Fall and Spring, 1-3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

CST 609: Topics in Cultural Theory
Emphasis on diverse specialist areas in cultural theory. Course content will vary depending upon instruction.

Offered Fall/ Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

CST 698: Practicum in Teaching
The course is divided into two parts: one half is normally given in the fall, one in the spring. The first part deals primarily with matters of pedagogy. The second part is designed to help students plan their own undergraduate courses. The practicum is required of all students during their first year.

1-3 credits, S/U grading
May be repeated 2 times FOR credit.

CST 699: Dissertation Research on Campus
Prerequisite: Advancement to candidacy (G5).

A portion of dissertation research must take place on SBU campus.

Fall, 1-9 credits, S/U grading
May be repeated for credit.

CST 800: SUMMER RESEARCH
May be repeated for credit.

CST 850: SUMMER TEACHING
May be repeated for credit.

CWL

Creative Writing and Literature

CWL 500: Introduction to Graduate Writing
A seminar that introduces students to one another, the faculty, the program in Writing and Literature, and to issues in contemporary writing. Offered in conjunction with the Writers Reading Series. Students will attend the regular series of readings sponsored by the Writing program and meet at weekly intervals under the direction of a faculty advisor to discuss and write about topics raised in the lecture series, as well as issues generated from seminar discussions.

Offered
Fall, 3-4 credits, Letter graded (A, A-, B+, etc.)

CWL 510: Forms of Fiction
Regular submission, discussion, and analysis of students' work in one or more of the modes
of fiction, including the short story, the novella, and the novel. Writing assignments may include exercises, imitations, responses, and original work. Students will examine relevant works that illustrate point of view, character development, dialogue, plot, setting, theme, motif, and other aspects of fiction. Specific mode or topic to be studied will be announced in the course schedule.

Prerequisite: Permission of instructor and/or departmental consent
Fall, 3-4 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

CWL 520: Forms of Poetry
Regular submission, discussion, and analysis of students' work in one or more of the modes of poetry. Writing assignments may include exercises, imitations, responses, and original work. Students will examine relevant works that illustrate structural principles, metrical and syntactical rhythm, sound and rhyme, formal and stanzaic organization, the use of figurative language, and other aspects of poetry.

Prerequisite: Permission of instructor and/or Program Director
Fall, 3-4 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

CWL 530: Forms of Scriptwriting
Regular submission, discussion, and analysis of students' work in one or more of the contemporary modes of scriptwriting, including writing for film, theater, radio, and television. Writing assignments may include exercises, imitations, responses, and original work. Students will examine relevant works that illustrate point of view, character development, dialogue, plot, setting, and other techniques vital to scriptwriting. Specific mode or topic to be studied will be announced in the course schedule.

Prerequisite: Permission of instructor and/or departmental consent
Fall, 3-4 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

CWL 540: Forms of Creative Nonfiction
Regular submission, discussion, and analysis of students' work in one or more of the contemporary fields of non-fiction writing, including biography, autobiography, memoir, expository writing, and social commentary. Writing assignments may include exercises, imitations, responses, and original work. Students will examine relevant works that illustrate the methods and techniques available to the non-fiction writer. Specific mode or topic to be studied will be announced in the course schedule.

Prerequisite: Permission of instructor and/or departmental consent
Fall, 3-4 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

CWL 550: Forms of Professional and Scientific Writing
Regular submission, discussion, and analysis of students' work in one or more of the contemporary modes of professional writing, including technological writing, writing about science, and writing for advertising, business, and public relations, as well as for governmental, educational, and professional organizations. Writing assignments may include exercises, imitations, responses, and original work. Students will examine relevant works that illustrate the strategies available in modern professional communication. Specific mode or topic to be studied will be announced in the course schedule.

Prerequisite: Permission of instructor and/or departmental consent
Fall, 3-4 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

CWL 550: Forms of Professional and Scientific Writing
Regular submission, discussion, and analysis of students' work in one or more of the contemporary modes of professional writing, including technological writing, writing about science, and writing for advertising, business, and public relations, as well as for governmental, educational, and professional organizations. Writing assignments may include exercises, imitations, responses, and original work. Students will examine relevant works that illustrate the strategies available in modern professional communication. Specific mode or topic to be studied will be announced in the course schedule.

Prerequisite: Permission of instructor and/or departmental consent
Fall, 3-4 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

CWL 570: Advanced Writing Workshop
The focus is on work in progress and the extension of the manuscript. The workshop is open to students interested in any form of writing. Students are encouraged to pursue their own writing interests while simultaneously being exposed to the work of others in varying genres. Regular writing is required, and vigorous analysis and discussion are encouraged. Strongly recommended for students preparing for the thesis.

Offered
Fall, 3-4 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

CWL 575: Writers Conference
The Southampton Writers Conference is an intensive program of workshops in contemporary writing that includes lectures, readings, workshops, and panels featuring nationally distinguished authors who join the department's summer faculty. Graduate students in the program will assist in planning and running the Conference, and will have the option of taking a Conference workshop for credit. The Writers Conference will also encourage participation by visiting students # new writers, established writers, teachers of writing and editors # who will be admitted by application and may receive academic credit upon request.

1-6 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

CWL 580: Practicum in Arts Administration
Practicum in Arts Administration
1-4 credits, Letter graded (A, A-, B+, etc.)
May be repeated 6 times FOR credit.

CWL 581: Practicum in Teaching Writing
Students take the seminar in conjunction with teaching a section of WRT 101. This course provides hands-on experience and instruction in the basics of writing pedagogy, including designing writing assignments, sequencing assignments, motivating writing, writing skill development and evaluating writing. Students will also be given a preliminary overview of the major theories driving composition pedagogy.

3 credits, Letter graded (A, A-, B+, etc.)

CWL 582: Practicum in Publishing and Editing
Under the guidance of the faculty advisor, students will be exposed to the hands-on process of editing and publishing a literary journal.

Offered
Fall, 1-4 credits, Letter graded (A, A-, B+, etc.)
May be repeated 6 times FOR credit.

**CWL 588: Independent Study**
Independent studies in topics chosen by the student are arranged through an individual instructor.
1-3 credits, S/U grading
May be repeated 1 times FOR credit.

**CWL 599: Thesis**
Every student in the M.F.A. program in Writing must complete a thesis that is a publishable, book-length work. It may be fiction, non-fiction, poetry, or a script for the visual media. It may be a collection of short pieces. Its subject matter may be scientific or literary. It may be business-oriented or academic. The thesis is judged solely on the quality of its intelligence and its writing. Every student will, with the assistance of the program director, choose a thesis supervisor to provide guidance and criticism in the completion of the project. At the same time that the thesis supervisor is chosen, the program director will also guide the student in the selection of a thesis committee, which will consist of the thesis supervisor, one other member of the faculty in Writing, and one outside reader knowledgeable in the student's field of interest. Progress toward the completion of the thesis will be reviewed not only by the thesis supervisor but also by members of the thesis committee.
1-9 credits, S/U grading
May be repeated 1 times FOR credit.

**DAN**

**DAN 501: Yoga and Somatics**
A practicum in the ancient Indian philosophy of yoga approached from the somatic perspective of equally conditioning the physical, psychical, and discriminating mental body. Moments of harmonious action within the human system will be investigated through the physical challenges of Hatha Yoga. Participants will learn dynamic movement sequences, static poses, and breathing techniques, as they relate to the varied historical lineages from India. The student will gain experiential knowledge of yoga as used for healing pain, improving body image through somatic awareness, prevention of mental and physical disease, muscular control, and as training to balance strength and flexibility. Although the course will focus primarily on the physical experience, related texts will be used to contextualize modern practices and familiarize the student with the extent of varied methodologies available.
Offered Fall and Summer, 3 credits, Letter graded (A, A-, B+, etc.)

**DAN 568: Dance Improvisation**
The practice and movement investigation through discipline, spontaneity, and awareness. Skills in improvisation will be developed through creative projects and experiments in dance.
Prerequisite: DAN 165, 166, or 167 Summer, 3 credits, Letter graded (A, A-, B+, etc.)

**DLF**

**D.A. in Foreign Language - French**

**DLF 601: Internship in Foreign Languages: French**
Students in the Doctor of Arts program assist an instructor as an aide in a literature, culture, or language course on the undergraduate level.
Fall and Spring, 1-3 credits, S/U grading

**DLF 602: Externship in Foreign Languages: French**
Students in the Doctor of Arts program teach one to three courses at the high school, junior college, or college level under the supervision of a master teacher.
Prerequisite: All other coursework completed Fall and Spring, 1-3 credits, S/U grading

**DLF 603: Independent Readings in Foreign Languages: French**
Independent readings on a selected topic in French language or literature.
1-6 credits, S/U grading
May be repeated for credit.

**DLF 699: Dissertation Research on Campus**
Independent research in French for the Doctor of Arts degree. Open only to candidates for the Doctor of Arts who have passed the preliminary examination.
Prerequisite: Advancement to candidacy (G5). Major portion of research must take place on SBU campus, at Cold Spring Harbor, or at the Brookhaven National Lab.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

**DLF 700: Dissertation Research off Campus - Domestic**
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place off-campus, but in the United States and/or U.S. provinces. Please note, Brookhaven National Labs and the Cold Spring Harbor Lab are considered on-campus. All international students must enroll in one of the graduate student insurance plans and should be advised by an International Advisor.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

**DLF 701: Dissertation Research off Campus - International**
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place outside of the United States and/or U.S. provinces. Domestic students have the option of the health plan and may also enroll in MEDEX. International students who are in their home country are not covered by mandatory health plan and must contact the Insurance Office for the insurance charge to be removed. International students who are not in their home country are charged for the mandatory health insurance. If they are to be covered by another insurance plan they must file a waiver be second week of classes. The charge will only be removed if other plan is deemed comparable.
All international students must received clearance from an International Advisor.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

**DLG**

**D.A. in Foreign Language - German**

**DLG 601: Internship in Foreign Languages: German**
Students in the Doctor of Arts program assist an instructor as an aide in a literature, culture, or language course on the undergraduate level.
Fall and Spring, 1-3 credits, S/U grading

**DLG 602: Externship in Foreign Languages: German**
Students in the Doctor of Arts program teach one to three courses at the high school, junior college, or college level under the supervision of a master teacher.
Prerequisite: All other coursework completed Fall and Spring, 1-3 credits, S/U grading

**DLG 603: Independent Readings in Foreign Languages: German**

Stony Brook University Graduate Bulletin: www.stonybrook.edu/gradbulletin

40
Independent readings on a selected topic in German language or literature and Russian language or literature.
Fall and Spring, 1-6 credits, S/U grading
May be repeated for credit.

**DLG 699: Dissertation Research on Campus**
Independent research in German for the Doctor of Arts degree. Open only to candidates for the Doctor of Arts who have passed the preliminary examination.
Prerequisite: Advancement to candidacy (G5).
Major portion of research must take place on SBU campus, at Cold Spring Harbor, or at the Brookhaven National Lab.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

**DLG 700: Dissertation Research off Campus - Domestic**
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place off-campus, but in the United States and/or U.S. provinces. Please note, Brookhaven National Labs and the Cold Spring Harbor Lab are considered on-campus. All international students must enroll in one of the graduate student insurance plans and be advised by an International Advisor.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

**DLG 701: Dissertation Research off Campus - International**
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place outside of the United States and/or U.S. provinces. Domestic students have the option of the health plan and may also enroll in MEDEX. International students who are in their home country are not covered by mandatory health plan and must contact the Insurance Office for the insurance charge to be removed. International students who are not in their home country are charged for the mandatory health insurance. If they are to be covered by another insurance plan they must file a waiver be second week of classes. The charge will only be removed if other plan is deemed comparable.
All international students must received clearance from an International Advisor.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

**DLI 601: Internship in Foreign Languages: Italian**
Students in the Doctor of Arts program assist an instructor as an aide in a literature, culture, or language course on the undergraduate level.
Fall and Spring, 1-3 credits, S/U grading

**DLI 602: Externship in Foreign Languages: Italian**
Students in the Doctor of Arts program teach one to three courses at the high school, junior college, or college level under the supervision of a master teacher.
Prerequisite: All other coursework completed
Fall and Spring, 1-3 credits, S/U grading

**DLI 603: Independent Readings in Foreign Languages: Italian**
Independent readings on a selected topic in Italian language or literature.
1-6 credits, S/U grading
May be repeated for credit.

**DLL 570: Introduction to Media for Language Teaching**
(Course open to non-DA graduate students.)
Gives students an introduction to all of the technology used in teaching languages: audio, video, computer, and internet. Emphasis is on hands-on use and practical applications.
Offered as DLL 570 and FLA 570
Prerequisites: FLA 505 and FLA 506
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

**DLL 571: Foreign Language Technology and Education**
Course open to non-DA graduate students.
Assumes knowledge of material taught in DLL/FLA 570. Addresses more globally and more theoretically the intersection between technology and languages. Issues of cognitive learning theory and educational psychology addressed.
Offered as DLL 571 and FLA 571
Prerequisites: FLA 505 and FLA 506
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

**DLR 601: Internship in Foreign Languages: Russian**
Students in the Doctor of Arts Program assist an instructor as an aide in a literature, culture, or language course on the undergraduate level.
Fall and Spring, 1-3 credits, S/U grading

**DLR 602: Externship in Foreign Languages: Russian**
Students in the Doctor of Arts Program will teach one to three courses at the high school,
junior college, or college level under the supervision of a master teacher.

Prerequisite: All other coursework completed

Fall and Spring, 1-3 credits, S/U grading

**DPA**

**Doctoral Program in Anthropological Sciences**

**DPA 501: Development of Anthropological Theory**

Survey of the development of anthropological theory from the 19th century to the present. This course is offered as both ANT 501 and DPA 501.

Spring, 4 credits, Letter graded (A, A-, B+, etc.)

**DPA 502: Social Ecology**

This course explores theoretical and methodological issues in the study of human social activity and its relationship to ecological systems and the environment. Readings include both classic studies as well as contemporary research, with particular emphasis placed on the various dimensions and scales of social organization and activity, and on the role of cultural, religious, and political institutions in shaping ecological relationships as well as economic behavior.

3 credits, Letter graded (A, A-, B+, etc.)

**DPA 503: Social Organization**

This course explores theoretical models and empirical observations of human social organization in a comparative perspective, including such topics as demography and behavioral ecology, kinship and marriage, reciprocal exchange, and political dimensions of resource mobilization in small-scale as well as complex societies. Organized around different layers of human sociality, the course examines social dependence among humans and nonhuman primates, evolutionary explanations for human mating strategies, cooperation in child-rearing, paradigms of descent and affinity, and the dynamics of hierarchy and alliance in egalitarian cultures as well as stratified states.

3 credits, Letter graded (A, A-, B+, etc.)

**DPA 509: Seminar in European Ethnography**

Investigation and discussion of selected topics and problems concerning European societies and cultures. The perspectives of culture history and current fieldwork are employed. This course is offered as both ANT 509 and DPA 509.

Fall, 3 credits, S/U grading

May be repeated for credit.

**DPA 511: Paleolithic Archaeology**

A survey of the archaeological record of foraging peoples in Africa, Europe, and Asia prior to the emergence of agriculture. The course emphasizes particular problems including the relationship between behavioral and biological change, different adaptive strategies in temperate and tropical zones, the origins of modern humans, and the emergence of complex hunter-gatherer societies. This course is offered as both ANT 511 and DPA 511.

Prerequisite: Any other archaeology course.

Fall, 4 credits, Letter graded (A, A-, B+, etc.)

**DPA 512: Comparative Civilizations**

A comparative study of the processes of sociocultural evolution from the beginnings of sedentary life to the achievement of early civilization in the Near East, Egypt, the Indus Valley, China, Mesoamerica, and the Andean area. The seminar covers such topics as urbanization, demography, irrigation, craftsmanship, militarism, and trade and exchange. This course is offered as both ANT 512 and DPA 512.

Prerequisite: Graduate standing or permission of instructor

Spring, 4 credits, Letter graded (A, A-, B+, etc.)

**DPA 513: Origins of Agriculture**

This course will trace the history of anthropological thought on the origins of agriculture and will assess the evidence from the Old and New worlds for this economic revolution. The course will not only explore areas where early agriculture is evidenced, but will also contrast these areas with those where agriculture was a later development. Emphasis will be on the environmental, technological, biological, social, and cultural processes associated with the "Neolithic Revolution."

This course is offered as both ANT 513 and DPA 513.

Fall, 4 credits, Letter graded (A, A-, B+, etc.)

**DPA 515: Theory and Method in Archaeology**

Theoretical and methodological approaches employed in archaeology. The goals of the course are to provide an historical perspective on the growth of theory and method in archaeology and to examine in detail some of the pertinent research topics being studied today. This course is offered as both ANT 515 and DPA 515.

Fall, 4 credits, Letter graded (A, A-, B+, etc.)
An examination of the ways in which archaeologists develop successful research strategies for arriving at answers to the key questions in the field. Students will analyze grant proposals that received funding from the major sources of funding for archaeology before developing research proposals of their own. The aim of the course is to provide the class with the skills needed to plan their future and compete successfully for funding both for their thesis research and in their future careers.

Fall, 4 credits, Letter graded (A, A-, B+, etc.)

DPA 517: Primitive Technology
An introduction to the technology of hunter-gatherers. The course examines how archaeologists use both ethnographic and experimental data to shed light on prehistoric human technological adaptations. Techniques for making and using primitive tools are practiced in weekly laboratory sessions.

Fall, 4 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

DPA 518: Lithic Technology
A detailed overview of the methods archaeologists use to extract behavioral information from prehistoric stone tools. The course examines raw material economy, technological strategies, tool use, and discard behavior. Analytical methods are practiced through the computer-assisted analysis of stone tools from simulated archaeological sites.

Spring, 4 credits, Letter graded (A, A-, B+, etc.)

DPA 519: Archaeozoology
An introduction to the study of animal bones from archaeological sites. Special emphasis is on identification of fragmented bone, identification of bone surface modification, calculation of indexes of abundance, and measurement and metrical analysis of mammal bone. Computer analysis is stressed, and the class seeks to synthesize traditional archaeozoology and actualistic studies. This course is offered as both ANT 519 and DPA 519.

Fall, 4 credits, Letter graded (A, A-, B+, etc.)

DPA 520: Principles of Social and Cultural Anthropology
Concepts and principles of social and cultural anthropology: historical background, structure and function, social processes, transactions, culture, communication, continuity, and other change; topics and problems of contemporary interest. Some ethnographic monographs are discussed in terms of their relevance to the general concepts and principles treated in the seminar. This course is offered as both ANT 520 and DPA 520.

Fall, 4 credits, Letter graded (A, A-, B+, etc.)

DPA 526: The Use of Remote Sensing and GIS in Environmental Analysis
An introduction to the use of aerial and satellite imagery in environmental analysis and the manipulation of geographic data sets of all types using Geographic Information Systems. This course is designed to teach students in archaeology, physical anthropology, and related disciplines, how satellite imagery combined with various maps can be manipulated using GIS software to perform powerful geographic analysis. Although students are eventually likely to use these tools in many different parts of the world, this course focuses on Long Island as a research area, and each student designs and completes a research project on a particular section of the area, focusing on the habitats of local wildlife, the locations of archaeological sites, coastal regimes, etc. This course focuses on local and regional satellite imagery and the implications of such data for archaeological research.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

DPA 527: Field Methods and Techniques in Archaeology
The course will be held during the summer only. It consists of field and laboratory work on an aspect of Long Island’s archaeological heritage. Students’ time is divided between surveying and excavation in the field and artifact analysis in the laboratory. Such techniques as map and air photo reading, survey, instruments, stratigraphy, conservation, typology construction, etc. are taught. Students are exposed to the full range of excavation, survey, and laboratory methods and techniques. This course is offered as both ANT 527 and DPA 527.

Prerequisite: Graduate standing or permission of instructor.

Summer, 3-9 credits, Letter graded (A, A-, B+, etc.)

DPA 540: Readings in Ethnography and Ethnology
A survey of the more important and better documented cultures and societies of selected world ethnographic areas and the implications of data from these for current approaches and problems in ethnology. This course is offered as both ANT 540 and DPA 540.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

DPA 541: Evolutionary Anatomy
A lecture and laboratory with emphasis on dissection of the entire human body. Includes functional and comparative anatomy with special emphasis on the musculoskeletal morphology of humans and higher primates. This course is offered as both DPA 541 and HBA 541.

Prerequisite: permission of instructor.

Fall, 8 credits, Letter graded (A, A-, B+, etc.)

DPA 550: Theory and Methodology in Primatology
Comprehensive overview of the theory and methodology used in the study of primate behavioral ecology. Includes ecological field methods, behavioral observations, analytical techniques, nonparametric statistics as well as planning, presenting, and reviewing research. Offered as both ANT 550 and DPA 550.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

DPA 559: Archaeology of Food
Explores the archaeological study of food and foodways. The emphasis is on the social aspects of food, particularly its roles in past power structures, social relationships, conceptions of identity, ritual practices, and gender roles. Also covers the theoretical and methodological approaches archaeologists use to study food in the past.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

DPA 560: Ancient Mesopotamia
An examination of the cultural history of Mesopotamia based on the archaeological, textual and historical record. Focusing on the forth through second millennia, this course investigates both the long term developmental process of this civilization, and ways to understand its settlement systems, urban structure, social and political organization, economic structure and the role played by religion.

Fall, 4 credits, Letter graded (A, A-, B+, etc.)

DPA 561: Peasant Societies and Cultures
The concept of peasantry is examined from political, religious, and social class viewpoints as well as from the more traditional economic view. These agricultural peoples, who are essentially preliterate and preindustrial, are described and analyzed especially in relation to the national societies of which they form a part. This course is offered as both ANT 561 and DPA 561.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

DPA 562: Long Island Archaeology

Stony Brook University Graduate Bulletin: www.stonybrook.edu/gradbulletin

43
Life on Long Island and the surrounding area from its first settlement by Native Americans 12,000 years ago until the end of the nineteenth century. Trends and changes in human behavior are studied in the context of environmental and cultural processes affecting all of northeastern North America.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

DPA 563: Aspects of Animal Mechanics

An introduction to biomechanics. Covers freebody mechanics and kinetics as applied to vertebrate locomotion. Considers the structure and physiology of muscle as it relates to adaptations of the musculoskeletal system. This course is offered as both HBA 563 and DPA 563.

Prerequisites: Introductory physics and biology or permission of instructor.

Spring, 2 credits, Letter graded (A, A-, B+, etc.)

DPA 564: Primate Evolution

The taxonomic relationships and evolutionary history of primates as documented by their fossil record and structural and chemical evidence. Emphasis on primates prior to the origin of the human lineage. This course is offered as ANT 564, DPA 564 and HBA 564.

Spring, 4 credits, Letter graded (A, A-, B+, etc.)

DPA 565: Human Evolution

A survey of the fossil record of hominid evolution through the Pliocene and Pleistocene with emphasis on the morphological structure and function of locomotor, masticatory, and neutral systems. Includes utilization of comparative anatomical material and extensive cast and slide collections. This course is offered as ANT 565, DPA 565 and HBA 565.

Fall, 4 credits, Letter graded (A, A-, B+, etc.)

DPA 566: Studies in Functional Morphology

Introduction to the theory and methods of functional morphology. Various methods of analysis and the application of experimental techniques such as electromyography or bone strain analysis are discussed as they pertain to the understanding of the interaction between form and function. Special emphasis is placed on the analysis of human and nonhuman primate morphology, and the application of this analysis to interpretation of the fossil evidence for human and nonhuman primate evolution. This course is offered as both HBA 566 and DPA 566.

Prerequisite: Permission of instructor.

Spring, 2 credits, Letter graded (A, A-, B+, etc.)

DPA 567: Primate Behavior and Ecology

A comparative approach to the behavior and ecology of living lemurs, monkeys, and apes. Emphasis is placed on sociobiological theory; life history strategies; morphological adaptations; comparisons of primate communities in Asia, Africa, Madagascar, and South America; and primate conservation. This course is offered as both ANT 567 and DPA 567.

Fall, 4 credits, Letter graded (A, A-, B+, etc.)

DPA 568: Hunters and Gatherers

The course focuses on the relationship between ecology and adaptation to explore the cross-cultural diversity of hunter/gatherers. The first part of the course looks at a number of key theoretic issues and debates that surround the study of hunter/gatherers. Once this foundation is laid, students learn about modern and historic hunter-gatherers from all the major geographic regions of the world. This overview draws on studies from behavioral ecology, ethnarchaeology and cultural anthropology. The focus of the course is both to explore hunter/gatherer variation in relationship to their environment, and to give students an appreciation of the ways in which hunter-gatherers have been historically documented. The course is designed to be applicable to archaeologists, anthropologists and to those in other disciplines who make inferences about past ways of life.

Spring, 3-4 credits, Letter graded (A, A-, B+, etc.)

DPA 573: Archaeology of Human Dispersals

A survey of the archaeological evidence for the dispersal of Homo sapiens during the Late Pleistocene epoch (128,000-130,000 years ago). Topics include African origin of Homo sapiens, dispersals into Eurasia, Australia, and the Americas, large mammal extinctions, origins of art, music, and symbolic behavior, emergence of hunter-gatherers.

Offered

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

DPA 582: Comparative Anatomy of Primates

The comparative anatomy of living primates. Laboratory dissection with emphasis on relating structural diversity to behavior and biomechanics. This course is offered as both HBA 582 and DPA 582.

Prerequisites: HBA 364 and previous course in human or vertebrate anatomy and permission of instructor.

Spring, 4 credits, Letter graded (A, A-, B+, etc.)

DPA 583: Human Demography

The study of human demography has had a long standing focus in anthropology, archaeology, economics and sociology for the simple reason that the distribution and density of people fundamentally shapes many other aspects of the human condition. Human Demography gives students an overview of population dynamics both as they change through time and differ across cultures. The course starts with outlining the history of population studies. Following this introduction, the three major components of population change - fertility, mortality and migration - are explored in depth. We then survey the seminal transitions in human demographic history from hunting and gathering to domestication and through modern postindustrial times. Drawing from the ethnographic, human ecology, demographic and archaeological literature, students read and discuss human demography from a variety of perspectives. The course includes some simple computations and a lab.

Spring, 3-4 credits, Letter graded (A, A-, B+, etc.)

DPA 585: Prehistoric Peoples of the Americas

ANT 585 Prehistoric Peoples of the Americas

Life in the Americas from the first settlement at the end of the Ice Age until the arrival of the Europeans in the 15th and 16th centuries. The culture, history, and evolution of prehistoric peoples of North, Central, and South America are treated. Specific topics covered include settlement by North Americans, hunting-gathering lifeways, plant and animal domestication, the origins of village life, and state-level societies.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

DPA 600: Practicum in Teaching

May be repeated for credit.

DPA 602: Research Seminar in Anthropological Theory

This course is offered as both ANT 602 and DPA 602.

Fall and Spring, 0-12 credits, S/U grading

May be repeated for credit.

DPA 610: Individual Research
Research supervised by faculty. Students must have permission of instructor and enroll in appropriate section. This course is offered as both ANT 610 and DPA 610.

Fall and Spring, 1-12 credits, S/U grading
May be repeated for credit.

DPA 620: Research Seminar in Topical Problems
This course is offered as both ANT 620 and DPA 620.
Fall and Spring, 3 credits, S/U grading
May be repeated for credit.

DPA 630: Research Seminar in Physical Anthropology
This course is offered as both ANT 630 and DPA 630.
Fall and Spring, 3 credits, S/U grading
May be repeated for credit.

DPA 640: Research Seminar in Ethnography and Ethnology
This course is offered as both ANT 640 and DPA 640.
Fall and Spring, 1-12 credits, S/U grading
May be repeated for credit.

DPA 650: Research Seminar in Archaeology

DPA 680: Special Seminar
Selected topics in cultural and social anthropology. Topics reflect current interests of faculty and graduate students. This course is offered as both ANT 680 and DPA 680.
Fall and Spring, 1-3 credits, S/U grading
May be repeated for credit.

DPA 699: Dissertation Research on Campus
Prerequisite: Must be advanced to candidacy (G5). Major portion of research must take place on SBU campus, at Cold Spring Harbor, or at the Brookhaven National Lab.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

DPA 700: Dissertation Research off Campus - Domestic
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place off-campus, but in the United States and/or U.S. provinces. Please note, Brookhaven National Labs and the Cold Spring Harbor Lab are considered on-campus. All international students must enroll in one of the graduate student insurance plans and should be advised by an International Advisor.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

DPA 701: Dissertation Research off Campus - International
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place outside of the United States and/or U.S. provinces. Domestic students have the option of the health plan and may also enroll in MEDEX. International students who are in their home country are not covered by mandatory health plan and must contact the Insurance Office for the insurance charge to be removed. International students who are not in their home country are charged for the mandatory health insurance. If they are to be covered by another insurance plan they must file a waiver be second week of classes. The charge will only be removed if other plan is deemed comparable.
All international students must received clearance from an International Advisor.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

DPA 800: Summer Research
This course is offered as both ANT 800 and DPA 800.
S/U grading
May be repeated for credit.

ECO Economics

ECO 500: Microeconomics I
The first semester of a one-year course in microeconomic theory. Deals with decision-making of economic agents in different choice environments using the analytical approach of duality theory. Topics include theory of the consumer, theory of the firm, decision-making under risk and uncertainty, intertemporal choice, aggregation, and capital theory.
Prerequisite: Graduate standing in the Economics Department or permission of the Graduate Director.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

ECO 501: Microeconomics II
A continuation of ECO 500, focusing on theories of equilibrium and market structure. Topics include general competitive equilibrium, imperfect competition and game theory, imperfect information, theory of public goods, and social choice.
Prerequisite: ECO 500, Graduate standing in the Economics Department or permission of the Graduate Director.
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

ECO 502: Applied Econometrics
A continuation of ECO 520. The application of mathematical and statistical methods of economic theory, including the concept of an explanatory economic model, multiple regression, hypothesis testing, simultaneous equations models, and estimating techniques.
Prerequisite: ECO 520, Graduate standing in the Economics Department or permission of the Graduate Director.
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

ECO 510: Macroeconomics I
The first semester of a one-year course in macroeconomic theory. Deals with theories and determinants of income, employment, and inflation. Topics include static equilibrium models, theories of money demand and monetary phenomena, theories of the labor market and unemployment, rational expectations and stabilization policy, consumption, and investment.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

ECO 511: Macroeconomics II
A continuation of ECO 510, focusing on dynamic models. Topics include models of economic growth, optimal growth and efficiency, overlapping-generations models, rational expectations, and optimal policy.
Prerequisite: ECO 510. Graduate standing in the Economics Department or permission of the Graduate Director.
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

ECO 520: Mathematical Statistics
The first semester of a one-year course in quantitative methods. Statistical methods and their properties of particular usefulness to economists. Topics include probability theory, univariate and multivariate distributions, limiting distributions, point and interval estimation, hypothesis testing.
Prerequisite: Graduate standing in the Economics Department or permission of the Graduate Director.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

ECO 521: Econometrics
A continuation of ECO 520. The application of mathematical and statistical methods of economic theory, including the concept of an explanatory economic model, multiple regression, hypothesis testing, simultaneous equations models, and estimating techniques.
Prerequisite: ECO 520, Graduate standing in the Economics Department or permission of the Graduate Director.
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

ECO 522: Applied Econometrics
Prerequisite: ECO 521. Graduate standing in the Economics Department or permission of the Graduate Director.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

ECO 531: Introduction to Computational Methods in Economics
A first course in the computational and graphical techniques for finding numerical solutions to a set of economic models (from more elementary models such as Edgeworth Box to a more general competitive equilibrium model to finding the policy function of a dynamic growth model) based on concepts and constructs presented in the 1st year graduate theory courses. Includes the foundations of programming (using a symbolic algebra language), and finding maxima of functions, finding equilibria of markets, and exploring and fitting functions graphically and through finite difference and projection methods. Emphasis is put on understanding the connections between the concepts, the algebra, the algorithm of the computation and the graphical presentation of economic models and on using the numerical models to perform experiments.

Co-Scheduled with ECO 310
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

ECO 590: Mathematical Foundations of Contemporary Economic Theory
A one-semester course dealing with mathematical concepts and techniques relevant to economic theory. Topics in set theory, topology, linear algebra, and optimization theory. Applications to economic theory developed as time permits.

Prerequisite: Graduate standing in the Economics Department or permission of the Graduate Director.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

ECO 597: Masters Project in Economics
In this required course students will work with an advisor of their choice to write a paper to be submitted by the end of the semester. This research piece will be a well structured and coherent article on an economic research question in a field of the student's choice, with some elements of originality. The paper cannot be just an extended example that carries some elements of originality. The paper will be a well-structured article on an economic research question in a field of the student's choice, with some elements of originality. The paper cannot be just an extended example that carries some elements of originality. The paper will be a well-structured article on an economic research question in a field of the student's choice, with some elements of originality. The paper cannot be just an extended example that carries some elements of originality. The paper will be a well-structured article on an economic research question in a field of the student's choice.

Prerequisite: Graduate standing in the Economics Department or permission of the Graduate Director.
Fall and Spring, 1-12 credits, S/U grading
May be repeated for credit.

ECO 604: Game Theory I
Elements of cooperative and noncooperative games. Matrix games, pure and mixed strategies, and equilibria. Solution concepts such as core, stable sets, and bargaining sets. Voting games, and the Shapley and Banzhaff power indices. This course is offered as both ECO 604 and AMS 552.
3 credits, Letter graded (A, A-, B+, etc.)

ECO 605: Game Theory II
Refinements of strategic equilibrium, games with incomplete information, repeated games with and without complete information, and stochastic games. The Shapley value of games with many players, and NTU-values. This course is offered as both ECO 605 and AMS 555.

Prerequisite for AMS 555: AMS 552/ECO 604.
Spring, 0-3 credits, Letter graded (A, A-, B+, etc.)

ECO 606: Advanced Topics in Strategic Behavior in Economics
An analysis of varying topics in strategic behavior in economics. One or more of the following topics and others will be dealt with each week: repeated games with incomplete information; stochastic games; bounded rationality complexity and strategic entropy; values of non-atomic games; strategic aspects in the telecommunication industry; general equilibrium and financial markets; auction mechanisms; knowledge, common knowledge, and strategic equilibria.

Prerequisites: ECO 501, ECO 604, ECO 605, or permission of instructor, Graduate standing in the Economics Department or permission of the Graduate Director.
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

ECO 607: Computational Economics
A concentration on numerical methods commonly used to solve dynamic macroeconomic models. These include methods relying on dynamic programming, linear approximation methods, and non-linear methods that can be applied to models with distortions and heterogeneous agents. The different methods will be explained and their application to macroeconomics will be illustrated with examples from various areas such as Real Business Cycles, Asset Pricing with Complete and Incomplete Markets, and Recursive Contracts.

Prerequisite: ECO 612, Graduate standing in the Economics department or permission of the Graduate Director.
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

ECO 608: Data Analysis and Economic Applications
Survey of major sources of data in economics and theoretical hypotheses and statistical methods for organizing and analyzing such data. Statistical models for quantitative data as well as qualitative choices are presented. Computer usage is expected.

Prerequisite: ECO 521; Graduate standing in the Economics department or permission of the Graduate Program Director.
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

ECO 609: Industrial Organization I
Topics in macroeconomic theory, including microfoundations of macroeconomics, temporary general equilibrium and disequilibrium, monetary theory, equilibrium theory of business cycles, implicit contracts, rational expectations, and econometric implications.
3 credits, Letter graded (A, A-, B+, etc.)
Applications of microeconomic theory to the determinants of market structure. Relationships between market structure, firm behavior, and allocational efficiency. Econometric estimation and testing of some hypotheses suggested by the theory.

**Prerequisite:** ECO 501, ECO 521; Graduate standing in the Economics department or permission of the Graduate Program Director.

**Fall, 3 credits, Letter graded (A, A-, B+, etc.)**

**ECO 637: Industrial Organization II**

This course is a continuation of ECO 636. It deals with the same questions and tools as ECO 636, and provides an introduction to antitrust policy and to public policy toward industry, including regulation and deregulation, the design of optimal regulation, and the effectiveness of current regulation.

**Prerequisites:** ECO 501, ECO 521; Graduate standing in the Economics department or permission of the Graduate Program Director.

**Spring, 3 credits, Letter graded (A, A-, B+, etc.)**

---

**ECO 640: Labor Economics I**

This is the first course in the graduate sequence in labor economic theory and empirical applications. Topics include human capital theory, labor supply, life cycle behaviors, and the behavioral effects of social insurance programs. The emphasis is on up to date treatments of these topics in the literature.

**Fall, 3 credits, Letter graded (A, A-, B+, etc.)**

**ECO 641: Labor Economics II**

This is an advanced course in labor economics which continues ECO 640. Topics include both theory and estimation of job search, matching, dynamic discrete and continuous choice models of the labor market. Special emphasis will be given to the role of economic theory in specification and testing econometric models.

**Offer**

**Spring, 3 credits, Letter graded (A, A-, B+, etc.)**

**ECO 642: Demographic Economics I**

This course deals with the economics of the family. It utilizes recently developed techniques in economics and demography to deal with questions concerning marriage, divorce, fertility, contraception, the intrafamily distribution of resources, and the intergenerational distribution of resources. Students will do original theoretical and empirical research under the professor's supervision.

**Prerequisite:** ECO 501; Graduate standing in the Economics department or permission of the Graduate Program Director.

**Fall or Spring, 0-3 credits, S/U grading**

---

**ECO 643: Demographic Economics II**

This course is a continuation of ECO 642. It deals with the same questions and tools as ECO 642, but emphasizes developing economies. The connections between population growth and development are stressed.

**3 credits, Letter graded (A, A-, B+, etc.)**

**ECO 645: Health Economics II**

Critical reviews of research in health economics topics of current interest, such as empirical and conceptual models of physician behavior, competition in the pharmaceutical industry, the economic impacts of managed care, and the causes and consequences of unhealthy behaviors. Students will present and critique original research and produce a research paper on a topic of their interest.

**3 credits, Letter graded (A, A-, B+, etc.)**

**ECO 646: Health Economics I**

Theoretical and econometric analysis of selected aspects of the health care delivery system, such as the demand for medical services, the supply and distribution of physician services, the utilization of non-physician medical personnel, alternative models of hospital behavior, third-party insurance reimbursement, national health insurance and cost, and price inflation in the hospital and long-term care sectors. Offered as ECO 646 or HPH 664.

**3 credits, Letter graded (A, A-, B+, etc.)**

**ECO 647: Research Methods in Applied Microeconomics**

Presentation, discussion and analysis of student and faculty research in the areas of applied microeconomics, labor economics, health economics and industrial organization, as well as applied econometrics. The purpose of the course is to provide skills and feedback to students at various levels in the program that assist them toward the completion of their second year paper, dissertation proposals and thesis. It is a course in research and presentation methods that provides an effective mechanism for learning about current areas of research interest.

**Prerequisite:** Graduate standing in the Economics Department or permission of the Graduate Director

**Fall or Spring, 0-3 credits, Letter graded (A, A-, B+, etc.)**

---

**ECO 690: Seminar in Applied Economics**

Preparation, presentation, and discussion of student and faculty research in applied economics. Topics covered by student papers are usually related to students' long-term research interests.

**Fall or Spring, 1-6 credits, S/U grading**

**ECO 695: Research Workshop**

Designed to direct students to the selection of dissertation topics. Oral and written presentation of student papers with active faculty participation. Several sections may be offered each semester in areas of broad research interest.

**Prerequisite:** Graduate standing in the Economics department or permission of the Graduate Program Director and three sections of coursework in the Ph.D. program.

**Fall, 3 credits, S/U grading**

May be repeated for credit.

**ECO 698: Practicum in Teaching**

Prerequisite: Graduate standing in the Economics department or permission of the Graduate Program Director.

**Spring, 3 credits, S/U grading**

May be repeated for credit.

**ECO 699: Dissertation Research on Campus**

Prerequisite: Have declared thesis advisor in Economics Ph.D. program (G5). Major portion of research must take place on SBU campus, at Cold Spring Harbor, or at the Brookhaven National Lab.

**Fall, 1-9 credits, S/U grading**

May be repeated for credit.

**ECO 700: Dissertation Research off Campus - Domestic**

Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place off-campus, but in the United States and/or U.S. provinces. Please note, Brookhaven National Labs and the Cold Spring Harbor Lab are considered on-campus. All international students must enroll in one of the graduate student insurance plans and should be advised by an International Advisor.

**Fall, 1-9 credits, S/U grading**

May be repeated for credit.

**ECO 701: Dissertation Research off Campus - International**

Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place outside of the United States and/or U.S. provinces. Domestic students have the option of the health plan and may also enroll.
in MEDEX. International students who are in their home country are not covered by mandatory health plan and must contact the Insurance Office for the insurance charge to be removed. International students who are not in their home country are charged for the mandatory health insurance. If they are to be covered by another insurance plan they must file a waiver be second week of classes. The charge will only be removed if other plan is deemed comparable.

All international students must receive clearance from an International Advisor. Fall, 1-9 credits, S/U grading May be repeated for credit.

ECO 800: Summer Research
Prerequisite: Pre-approved participation in Economics dept. activity.
S/U grading
May be repeated for credit.

EGL

English

EGL 501: Studies in Chaucer
EGL 502: Studies in Shakespeare
EGL 503: Studies in Milton
EGL 505: Studies in Genre
May be repeated for credit.

EGL 506: Studies in Literary Theory
Prerequisite: Matriculation in a graduate program or the composition studies certificate.
3 credits, Letter graded (A, A-, B+, etc.)

EGL 509: Studies in Language and Linguistics

EGL 510: Old English Language and Literature
EGL 515: Middle English Language and Literature
EGL 520: Studies in the Renaissance
EGL 525: 17th-Century Literature
EGL 530: Studies in Restoration Literature
EGL 535: Studies in Neoclassicism

EGL 540: Studies in Romanticism
EGL 545: Studies in Victorian Literature
EGL 547: Late 19th-Century British Literature
EGL 550: 20th-Century British Literature
EGL 555: Studies in Irish Literature
EGL 560: Studies in Early American Literature
EGL 565: 19th-Century American Literature
EGL 570: 20th-Century American Literature
EGL 575: British and American Literature

EGL 582: Drama Workshop
EGL 584: Topics in Genre Studies
Changing focus on various forms of writing, including poetry, drama, fiction, the essay, etc.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

EGL 585: Topics in Cultural Studies
Changing issues in the interdisciplinary study of culture, including literature, popular culture, discourse studies, media studies, etc. Focus is on the analysis of historical contexts and on methods derived from contemporary cultural theory.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

EGL 586: Topics in Gender Studies
Changing historical or theoretical focus on issues in gender studies, sexuality, queer studies, or women's writing.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

EGL 587: Topics in Race, Ethnic, or Diaspora Studies
Changing historical or theoretical focus on issues of race or ethnicity, on U.S., British, or global ethnic literatures, or on experiences, histories, or theories of colonization, decolonization, empire, globalization, or diaspora.

EGL 588: Writing Workshop
Changing focus on various forms of writing, including poetry, drama, fiction, the essay, etc.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

EGL 592: Problems in Teaching Writing or Composition
This course provides an overview of writing pedagogy as applied to tutoring in a Writing Center or in an English classroom. Included in the course is fieldwork in the campus Writing Center.
3 credits, Letter graded (A, A-, B+, etc.)

EGL 593: Problems in Teaching Literature

EGL 594: Contexts of Literary Study
EGL 597: Practicum in Methods of Research
EGL 598: Thesis Research
Research and writing of M.A. thesis supervised by faculty advisor.
Fall, 1-3 credits, S/U grading
May be repeated for credit.

EGL 599: Independent Study
May be repeated for credit.

EGL 600: Proseminar: The Discipline of Literary Studies
Pro-seminar: Introduction to critical analysis, including theoretical and methodological approaches, and an orientation to the profession both in the academy and other careers. Faculty members will speak on their own scholarship and professional experiences.
3 credits, Letter graded (A, A-, B+, etc.)

EGL 601: Problems in History and Structure of the English Language
A survey of the English language from its historical beginnings through the present.
3 credits, Letter graded (A, A-, B+, etc.)

EGL 602: Problems in Bibliography, Editing, and Textual Criticism
An introduction to the study of manuscripts and printed books, with special emphasis on editorial and textual problems and decisions.
3 credits, Letter graded (A, A-, B+, etc.)

EGL 603: Problems in Literary Theory and Criticism
A seminar on any of the current theoretical approaches to texts.
3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

EGL 604: Problems in Literary Analysis
An introduction to the explication of texts.
3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

EGL 605: Problems in Convention and Genre
An examination of literary types and categories.
3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

EGL 606: Period and Tradition
An examination of the major issues that pertain to particular historical literary periods.
3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

EGL 607: Individual Authors
In depth study of specified writers, from Old English to Contemporary World Literatures in English.
3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

EGL 608: Problems in the Relationship of Literature to Other Disciplines
This seminar will encourage the interdisciplinary focus of our program by examining the intersection between textual studies and other forms of inquiry.
3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

EGL 611: Critical Theory
A seminar on influential theoretical approaches to texts.
3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

EGL 612: Theories in Composition
This course explores the relationship between reading and writing skills, the differences between speech production and writing production, and the relationship between literacy, culture, and language politics.
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

EGL 613: Research in Composition
This course provides an introduction to the nature of empirical research in Composition Studies. Students will survey landmark research studies, learn how to read research reports critically, and conduct a mini-research project in their own classrooms or tutoring situations to analyze underlying causes of students’ writing problems.
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

EGL 614: Topics in Composition and Writing
This course will consist of directed readings in particular areas of interest in rhetoric, the history of rhetoric and pedagogy, and teaching strategies for teachers.
Offered
Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

EGL 620: Literary Studies Research and Writing Seminar
This course focuses on the research and writing skills necessary to submit work for publication. In addition to shared readings, students will conduct substantial new research and expand a paper they have previously written for a graduate seminar. Please note that this course cannot be taken until students have completed at least one semester of the doctoral program.
3 credits, Letter graded (A, A-, B+, etc.)

EGL 690: Directed Readings
May be repeated for credit.

EGL 695: Methods of Teaching English Literature
3 credits, S/U grading

EGL 698: Practicum in Teaching Writing
Students take the seminar in conjunction with teaching a section of WRT 101. This course provides hands-on experience and instruction in the basics of writing pedagogy, including designing writing assignments, sequencing assignments, motivating writing, writing skill development and evaluating writing. Students will also be given a preliminary overview of the major theories driving composition pedagogy.
3 credits, Letter graded (A, A-, B+, etc.)

EGL 699: Dissertation Research on Campus
Prerequisite: Advancement to candidacy (G5). Major portion of research must take place on SBU campus, at Cold Spring Harbor, or at the Brookhaven National Lab.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

EGL 700: Dissertation Research off Campus - Domestic
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place off-campus, but in the United States and/or U.S. provinces. Please note, Brookhaven National Labs and the Cold Spring Harbor Lab are considered on-campus. All international students must enroll in one of the graduate student insurance plans and should be advised by an International Advisor.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

EGL 701: Dissertation Research off Campus - International
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place outside of the United States and/or U.S. provinces. Domestic students have the option of the health plan and may also enroll in MEDEX. International students who are in their home country are not covered by mandatory health plan and must contact the Insurance Office for the insurance charge to be removed. International students who are not in their home country are charged for the mandatory health insurance. If they are to be covered by another insurance plan they must file a waiver be second week of classes. The charge will only be removed if other plan is deemed comparable.
All international students must received clearance from an International Advisor.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

EGL 800: SUMMER RESEARCH
May be repeated for credit.

EMP

Engineering Management

EMP 501: Behavioral and Organizational Aspects of Management
This course provides an understanding of the management process by analyzing organizational behavior. Topics include behavior in two-person situations, factors influencing attitudes and changes in organizational behavior, group influence on behavior, formal and informal organizational structures, conflict and conflict resolutions, and the dynamics of planned change.
EMP 502: Management Accounting and Financial Decision Analysis
Fundamentals of financial and managerial accounting with emphasis on concepts, ratio and break-even analysis, financial structure, cost analysis, replacement of assets, and cash flow management. Offered as EMP 502 or HPH 660.

EMP 503: Legal and Regulatory Aspects of Management
A survey of business and regulatory law. Topics include contracts, sales, warranties, and business partnerships and corporations. An overview is provided of high technology topics such as computer law, product liability, patent, trademark, copyright, and environmental law and their impact on business.

EMP 504: Quantitative Methods in Management
This course is a rapid introduction to the application of modern mathematical concepts and techniques in management science. Algebraic operations, mathematical functions and their graphical representation, and model formulation are reviewed. Topics covered include the following: mathematics of interest, annuity, and amortization; algebraic and graphic methods of linear programming; PERT, CPM, and other network models; and inventory theory. Simple management-oriented examples are used to introduce mathematical formulations and extensions to more general problems. The computer laboratory is used to give students experience with PC software packages that solve problems in all course topics. Interpretation of computer outputs is also stressed.

EMP 505: Global Operations
A managerial approach to the concepts, issues, and techniques used to convert an organization's resources into products and services. Topics include strategic decisions for planning products, processes, and technologies, operating decisions for planning production to meet demand, and controlling decisions for planning and controlling operations through teamwork and Total Quality Management (TQM). Operational problems in producing goods and services are reviewed.

EMP 507: Research and Special Topics in Global Industrial Management
An individual study course for students investigating special topics relating to global industrial management.

EMP 509: Enterprise Information and Knowledge Systems Management
This course covers the different types of enterprise systems, how they are used to manage an organization's processes, re-engineering the business with enterprise systems, and the relationship among technology, organization, and management. Knowledge-based and web-based features in modern enterprise systems will be emphasized. Database Management, Security, Control, Ethical, and Social issues of enterprise systems will be discussed.

EMP 511: Starting a Business Venture
This course covers the necessities of beginning a business from turning a concept into a new venture and developing a business plan for a venture. Topics include how to identify and evaluate the product and its market potential; management and organization issues; production and channels of distribution; and how to present a plan to the financial community. Specific case studies and guest speakers are utilized.

EMP 517: Quality and Value Management
Modern management's approach to quality has changed radically in the last 20 years; this course explains why and how. It covers methods used by both manufacturing and service organizations to achieve high quality: how each organizational function is involved in quality; how improving quality can reduce costs; importance of communication; importance of involving all employees; need to measure quality; and introduction to statistical quality control and how it is used.

EMP 518: Program / Project Management
We will examine how teams can be organized, directed, and monitored so that relatively complex projects can be carried out efficiently.

EMP 521: New Product Development and Design
This course covers how to manage enterprise innovation, corporate innovation cultures, ideation and creative thinking, product design and development processes and phases, issues in product design, collaboration between R&D and operations/marketing. Also, this class will focus on how to use forecasting to ensure the successful launch of a product. Case studies will be discussed.

EMP 522: Strategic Marketing: Planning and Process
This course will examine the vital role that strategic marketing and planning plays in all businesses, as well as non-profit and government organizations. Marketing's role in our economy, society and the appropriate marketing target and mix of media will also be presented. The various careers which exist in marketing and the structure of marketing plans and departments are studied. The class will create a marketing plan based on real products and present it.

EMP 523: International Business and Management
This course covers the world's marketplace, international environment, managing international business, and managing international business operations. Additional topics include cultural issues in a global marketplace, the impact of law and legal differences in the world marketplace compared to the U.S., and addressing competitive issues related to items such as a need for local contact.

EMP 524: Supply Chain Management
The integration of the activities that procure materials and services, transform them into intermediate goods and final products, and deliver them to the customers in a global environment. This course covers all the logistical, ethics, and outsourcing issues in strategic and global ways. Offered
ESE 501: System Specification and Modeling
A comprehensive introduction to the field of System-on-Chip design. Introduces basic concepts of digital system modeling and simulation methodologies. Various types of hardware description language (HDL) will be studied, including Verilog, VHDL, and SystemC. Topics include top-down and bottom-up design methodology, specification language syntax and semantics, RTL, behavioral and system-level modeling, and IP core development. Included are three projects on hardware modeling and simulation.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

ESE 502: Linear Systems

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

ESE 503: Stochastic Systems

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

ESE 504: Performance Evaluation of Communications and Computer Systems
Advanced scheduling theory, queuing models and algorithms for communication and computer systems. Transient analysis and M/G/1 queue models. Networks of queues, mean value analysis and convolution algorithms.

ESE 505: Wireless Communications
This course covers first year graduate level material in the area of wireless communications: Wireless channels, overview of digital communications and signal processing for wireless comm., voice and data applications, design basics for wireless moderns, analysis of system issues like resource management and handoff, cellular and wireless LAN systems.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

ESE 506: Wireless Network
This course will examine the area of wireless networking and mobile computing, looking at the unique network protocol challenges and opportunities presented by wireless communications and host or router mobility. The course will give a brief overview of fundamental concepts in mobile wireless systems and mobile computing, it will then cover system and standards issues including second generation circuit switched and third generation packet switched networks, wireless LANs, mobile IP, ad-hoc networks, sensor networks, as well as issues associated with small handheld portable devices and new applications that can exploit mobility and location information. This is followed by several topical studies around recent research publications in mobile computing and wireless networking field. This course will make the system architecture and applications accessible to the electrical engineer.

3 credits, Letter graded (A, A-, B+, etc.)

May be repeated 2 times FOR credit.

ESE 508: Analytical Foundations of Systems Theory
An exposition of the basic analytical tools for graduate study in systems, circuits, control, and signal processing. Sets and mappings, finite-dimensional linear spaces, metric spaces, Banach spaces, Hilbert spaces. The theory will be developed and exemplified in the context of systems applications such as nonlinear circuits, infinite networks, feedback control, signal restoration via projections, and optimal signal modeling.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

ESE 510: Electronic Circuits

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

May be repeated for credit.
is required. Analytical models of increasing complexity and their SPICE Implementations are discussed. The second part of the course allows students to focus on their field of preference: Device physics; digital circuits; Analog circuits. The course includes a project in one of these subtopics.

*Fall, 3 credits, Letter graded (A, A-, B+, etc.)*

**ESE 515: Quantum Electronics I**

Physics of microwave and optical lasers. Topics include introduction to laser concepts; quantum theory; classical radiation theory; resonance phenomena in two-level systems; Block equations-Kramers-Kronig relation, density matrix; rate equation and amplification; CO2 lasers; discharge lasers; semiconductor lasers.

*Fall, 3 credits, Letter graded (A, A-, B+, etc.)*

**ESE 516: Integrated Electronic Devices and Circuits I**

Theory and applications: elements of semiconductor electronics, methods of fabrication, bipolar junction transistors, FET, MOS transistors, diodes, capacitors, and resistors. Design techniques for linear digital integrated electronic components and circuits. Discussion of computer-aided design, MSI, and LSI.

*Fall, 3 credits, Letter graded (A, A-, B+, etc.)*

**ESE 517: Integrated Electronic Devices and Circuits II**

Theory and applications: elements of semiconductor electronics, methods of fabrication, bipolar junction transistors, FET, MOS transistors, diodes, capacitors, and resistors. Design techniques for linear digital integrated electronic components and circuits. Discussion of computer-aided design, MSI, and LSI.

*Spring, 3 credits, Letter graded (A, A-, B+, etc.)*

**ESE 518: Advanced Design of Low Noise and Low Power Analog Circuits**

Students will learn state-of-the-art circuit techniques for low-noise and low-power amplification and processing of signals from sensors. Examples of circuits are low-noise amplifiers, filters, peak directors and discriminators. Applications range from medical, to security, safety, industrial measurements and physics research. As a course project, students will develop part of a front-end circuit from transistor level to physical layout using industry-standard CAD tools, and will participate in the experimental characterization of those similar circuits. At the end of the course the student will own a solid background and the basic instruments to design low-noise and low-power amplifiers and processing circuits.

*Offered in Fall, 3 credits, Letter graded (A, A-, B+, etc.) May be repeated 1 times FOR credit.*

**ESE 519: Semiconductor Lasers and Photodetectors**

The course provides an introduction to performance, testing and fabrication techniques for semiconductor lasers and photodetectors. The topics include fundamentals of laser and detector operation, devices band diagram, device characteristics, and testing techniques for analog and digital edge emitting and surface emitting lasers, avalanche and PIN photodetectors. Special attention is given to the design and working characteristics of transmitters and pumping lasers for telecommunication networks.

*3 credits, Letter graded (A, A-, B+, etc.)*

**ESE 520: Applied Electromagnetics**

*Spring, 3 credits, Letter graded (A, A-, B+, etc.)*

**ESE 521: Applied Optics**

This course teaches students the fundamental techniques necessary for analyzing and designing optical systems. Topics include matrix methods for ray optics, fundamentals of wave optics, beam optics, Fourier optics and electromagnetic optics. The latter part of the course will deal with optical activity in anisotropic media and include polarization and crystal optics, electro-optics and acousto-optics.

*3 credits, Letter graded (A, A-, B+, etc.)*

**ESE 522: Fiber Optic Systems**

This course covers the essential components of a modern optical fiber communication system: (I) wave propagation in optical fiber waveguides, (II) transmitter design, (III) receiver design, (IV) single wavelength fiber-optic networks, and (V) wavelength division multiplexing networks.

*Prerequisite: ESE 319 Fall, 3 credits, Letter graded (A, A-, B+, etc.)*

**ESE 524: Microwave Acoustics**

Continuum acoustic field equations. Wave equation, boundary conditions, and Pointing vector. Waves in isotropic elastic media: plane-wave modes, reflection and refraction phenomena, bulk-acoustic-wave (BAW) waveguides, surface acoustic waves (SAW). Plane and guided waves in piezoelectric media. BAW transduction and applications: delay-line and resonator structures, the Mason equivalent circuit, monolithic crystal filters, IM CON dispersive delay lines, acoustic microscopes, SAW transduction and applications: the interdigital transducer, band-pass filters, dispersive filters, convolvers, tapped delay lines, resonators.

*Prerequisite: ESE 319 Fall, 3 credits, Letter graded (A, A-, B+, etc.)*

**ESE 525: Modem Sensors**

Sensors are devices that convert physical values into electrical signals. This course will provide practical information on diversified subjects related to the operation principles, design and use of various sensors. Established and novel sensor technologies as well as problems of interfacing various sensors with electronics are discussed.

*Offered in Spring, 3 credits, Letter graded (A, A-, B+, etc.)*

**ESE 526: Silicon Technology for VLSI**

This course introduces the basic technologies employed to fabricate advanced integrated circuits. These include epitaxy, diffusion, oxidation, chemical vapor deposition, ion implantation lithography and etching. The significance of the variation of these steps is discussed with respect to its effect on device performance. The electrical and geometric design rules are examined together with the integration of these fabrication techniques to reveal the relationship between circuit design and the fabrication process.

*Fall, 3 credits, Letter graded (A, A-, B+, etc.)*

**ESE 527: Circuit Theory and Applications**

Foundation of design procedures for electric circuits. Fundamental concepts, graph theory, network equations, network functions, state equations, network synthesis, scattering parameters, nonlinear circuits.

*Fall, 3 credits, Letter graded (A, A-, B+, etc.)*

**ESE 528: Communication Systems**

This course provides a general overview of communication theory and addresses fundamental concepts in this field. After a review of signals and systems representations, various continuous and digital modulation
schemes are analyzed. Spread spectrum systems and their application to multiuser communications are also addressed. Advanced communication systems are described and general concepts of wide and local area networks are introduced.

Fall, 3 credits, Letter graded (A, A-, B+, etc.) May be repeated for credit.

ESE 529: Electrical Network Theory
Linear and nonlinear electrical networks; graph theory; determination of operating points; transient estimation; interconnection networks; numerical methods; parameter extraction; finite and transfinite networks; discrete potential theory; random walks on networks.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

ESE 530: Computer-Aided Design
The course presents techniques for analyzing linear and nonlinear dynamic electronic circuits using the computer. Some of the topics covered include network graph theory, generalized nodal and hybrid analysis, companion modeling, Newton’s method in n-dimensions and numerical integration.

Prerequisite: B.S. in Electrical Engineering
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

ESE 531: Detection and Estimation Theory

Prerequisite: ESE 503 or permission of instructor
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

ESE 532: Theory of Digital Communication
Optimum receivers, efficient signaling, comparison classes of signaling schemes. Channel capacity theorem, bounds on optimum system performance, encoding for error reduction, and the fading channel. Source coding and some coding algorithms.

Prerequisite: ESE 503
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

ESE 535: Information Theory and Reliable Communications

Prerequisite: ESE 503 or equivalent or permission of instructor
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

ESE 536: Switching and Routing in Parallel and Distributed Systems
This course covers various switching and routing issues in parallel and distributed systems. Topics include message switching techniques, design of interconnection networks, permutation, multicast and all-to-all routing in various networking nonblocking, and rearrangeable capability analysis and performance modeling.

3 credits, Letter graded (A, A-, B+, etc.)

ESE 540: Reliability Theory

3 credits, Letter graded (A, A-, B+, etc.)

ESE 541: Digital System Design
The course provides an introduction to digital and computer systems. The course follows a top-down approach to presenting design of computer systems, from the architectural level to the gate level. VHDL language is used to illustrate the discussed issues. Topics include design hierarchy and top-down design, introduction to hardware description languages, computer-aided design and digital synthesis, basic building blocks like adders, comparators, multipliers, latches, flip-flops, registers etc, static and dynamic random access memory, data and control buses, fundamental techniques for combinational circuit analysis and design, sequential circuit design procedures, and programmable logic devices. Testing of digital designs is addressed throughout the course. A mini project will complement the course.

Cannot be used to fulfill any ESE degree requirements.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

ESE 542: Product Design Concept Development and Optimization
This graduate course will concentrate on the design concept development of the product development cycle, from the creative phase of solution development to preliminary concept evaluation and selection. The course will then cover methods for mathematical modeling, computer simulation and optimization. The concept development component of the course will also cover intellectual property and patent issues. The course will not concentrate on the development of any particular class of products, but the focus will be mainly on mechanical and electromechanical devices and systems. As part of the course, each participant will select an appropriate project to practice the application of the material covered in the course and prepare a final report.

Prerequisites: Undergraduate electrical or mechanical engineering and/or science training.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

ESE 544: Network Security Engineering
An introduction to computer network and telecommunication network security engineering. Special emphasis on building security into hardware and software working with software. Topics include encryption, public key cryptography, authentication, intrusion detection, digital rights management, firewalls, trusted computing, encrypted computing, intruders and virus. Some projects.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

ESE 545: Computer Architecture
The course covers uniprocessor and pipelined vector processors. Topics include: hierarchical organization of a computer system; processor design; control design; memory organization and virtual memory; I/O systems; balancing subsystem bandwidths; RISC processors; principles of designing pipelined processors; vector processing on pipelines; examples of pipelined processors. The course involves a system design project using VHDL.

Prerequisite: ESE 318 or equivalent
Spring, 4 credits, Letter graded (A, A-, B+, etc.)

ESE 546: Computer Communications Network

Prerequisite: ESE 503 or permission of instructor
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

ESE 547: Digital Signal Processing

Prerequisite: Senior level course in signals and systems
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

ESE 548: Local & Wide Area Networks
Extended coverage of specific network protocols. Protocols covered include IEEE 802 local area network protocols. Asynchronous Transfer Mode (ATM), Synchronous optical Network (SONET), metropolitan area network protocols, backbone packet switching protocols, and transport control protocol/Internet protocol (TCP/IP), network security, web server design and design computing.

Prerequisite: ESE 546 or permission of instructor
Summer, 3 credits, Letter graded (A, A-, B+, etc.)

ESE 549: Advanced VLSI System Testing
This course is designed to acquaint students with fault diagnosis of logic circuits. Both combinatorial and sequential circuits are considered. Concepts of faults and fault models are presented. Emphasis is given to test generation, test selection, fault detection, fault location, fault location within a module and fault correction.

Prerequisite: BS in Electrical Engineering
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

ESE 550: Network Management and Planning
This course provides an introduction to telecommunications and computer network management and planning. Network management is concerned with the operation of networks while network planning is concerned with the proper evolution of network installations over time. Network management topics include meeting service requirements, management operations, management interoperability, and specific architectures such as Telecommunications Management Network (TMN), and Simple Network Management Protocol (SNMP). Network planning topics include planning problem modeling, topological planning design, heuristic and formal solution techniques.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

ESE 551: Switching Theory and Sequential Machines
Survey of classical analysis and synthesis of combination and sequential switching circuits, followed by related topics of current interest such as error diagnosis and fail soft circuits, use of large-scale integration, logic arrays, automated local design.

Prerequisite: ESE 318 or equivalent
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

ESE 552: Interconnection Networks
Formation and analysis of interconnect processing elements in parallel computing organization. Topics include: SIMD/MIMD computers, multiprocessors, multicomputers, density, symmetry, representations, and routing algorithms. Topologies being discussed include: Benes, Omega, Banyan, mesh, hypercube, cube-connected cycles, generalized chordal rings, chordal rings, DeBruijn, Moebius graphs, Cayley graphs, and Borel Cayley graphs.

Prerequisite: ESE 545 or equivalent
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

ESE 553: A/D and D/A Integrated Data Converters
This is an advanced course on analog integrated circuit design aspects for data converters. Topics include: continuous and discrete-time signals and systems; sampling theorem; ideal ND and D/A converters; specifications and testing of data converters; basic building blocks in data converters: current sources and mirrors, differential gain stages, voltage references, S/H circuits, comparators; Nyquist D/A and ND converters: principles of data conversion and circuit design techniques; oversampling data converters: low-pass and band-pass delta-sigma modulators, decimation and interpolation for delta-sigma data converters. The attending students must be acquainted with principles of transistor operation, function of simple analysis. Familiarity with SPICE is required.

3 credits, Letter graded (A, A-, B+, etc.)

ESE 554: Computational Models for Computer Engineers
This course covers mathematical techniques and models used in the solution of computer engineering problems. The course heavily emphasizes computer engineering application. Topics covered include set theory, relations, functions, graph theory and graph algorithms, and algebraic structures.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

ESE 555: Advanced VLSI Systems Design
Techniques of VLSI circuit design in the MOS technology are presented. Topics include MOS transistor theory, CMOS processing technology, MOS digital circuit analysis and design, and various CMOS circuit design techniques. Digital systems are designed and simulated throughout the course using an assortment of VLSI design tools.

Prerequisite: B.S. in Electrical Engineering or Computer Science
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

ESE 556: VLSI Physical and Logic Design Automation
Areas to be covered are Physical Design Automation and Logic Design Automation. Upon completion of this course, students will be able to develop state-of-the-art CAD tools and algorithms for VLSI logic and physical design. Tools will address design tasks such as floor planning, module placement and signal routing. Also, automated optimization of combinational and sequential circuits will be contemplated.

Prerequisite: B.S. in Computer Engineering/Science or Electrical Engineering
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

ESE 557: Digital Signal Processing II: Advanced Topics
A number of different topics in digital signal processing will be covered, depending on class and current research interest. Areas to be covered include the following: parametric signal modeling, spectral estimation, multirate processing, advanced FFT and convolution algorithms, adaptive signal processing, multidimensional signal processing, advanced filter design, dedicated signal processing chips, and signal processing for inverse problems. Students will be expected to read and present current research literature.

Prerequisite: ESE 547 or permission of instructor
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

ESE 558: Digital Image Processing I
Covers digital image fundamentals, mathematical preliminaries of two-dimensional systems, image transforms, human perception, color basics, sampling and quantization, compression techniques, image enhancement, image restoration, image reconstruction from projections, and binary image processing.

Prerequisite: B.S. in Engineering or Physical or Mathematical Sciences
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

ESE 559: Digital Image Processing II
The course material will proceed directly from DIP-I, starting with image reconstruction from projections. After the basic projection, theorems are developed and computerized axial tomography techniques will be examined in detail including forward and inverse random transformations, convolution, back projection, and Fourier reconstruction; nuclear magnetic resonance imaging and positron emission tomography will be similarly covered. Surer resolution concepts will be developed and applied to a variety of remote sensing applications as well as digital image coding for efficient transmission of digital TV imagery.

**Prerequisite:** ESE 558

**ESE 560: Optical Information Processing**

The course is designed to give the student a firm background in the fundamentals of optical information processing techniques. It is assumed that the student is familiar with Fourier transforms and complex algebra, and is conversant with the principles of linear system theory. The course begins with a mathematical introduction to linear system theory and Fourier transformation. The body of the course is concerned with the scalar treatment of diffusion and its application to the study of optical imaging techniques and coherent and incoherent optical processors.

**Prerequisite:** B.S. in Physical Sciences

**ESE 563: Fundamentals of Robotics I**

This course covers homogenous transformations of coordinates; kinematic and dynamic equations of robots with their associated solutions; control and programming of robots.

**Prerequisite:** Permission of instructor

**ESE 565: Parallel Processing Architectures**

This course provides a comprehensive introduction to parallel processing. Topics include types of parallelism, classification of parallel computers, functional organizations, interconnection networks, memory organizations, control methods, parallel programming, parallel algorithms, performance enhancement techniques and design examples for SIMD array processors, loosely coupled multiprocessors, and tightly coupled multiprocessors. A brief overview of dataflow and reduction machines will also be given.

**Prerequisite:** ESE 545 or equivalent

**ESE 566: Hardware-Software Co-Design of Embedded Systems**

This course will present state-of-the-art concepts and techniques for design of embedded systems consisting of hardware and software components. Discussed topics include system specification, architectures for embedded systems, performance modeling and evaluation, system synthesis and validation. The course is complemented by three mini-projects focused on designing and implementing various co-design methods.

**ESE 567: Introduction to Auto ID Technologies**

This new introductory course is a series of Auto ID systems, technologies and applications. The course covers theory and applications of important data-capture technologies, namely, barcodes, biometrics and RFID. Topics to be covered include: architecture of data-capture/ Auto ID system, barcodes: overview of 1-D and 2-D barcodes and other LOS technologies; biometrics: fingerprints, iris-scan, voice recognition and smart-cards; radio frequency identification (RFID): fundamentals, near-field vs. far-field, UHF read range estimation, reader sensitivity limits, tag singulation and multiple access protocols, standards, privacy and security issues in RFID, real time location systems (RTLS), and wireless sensor networks.

**Prerequisites:** ESE 372, ESE 218, ESE 305

3 credits, Letter graded (A, A-, B+, etc.)

**ESE 568: Computer and Robot Vision**

Principles and applications of computer and robot vision are covered. Primary emphasis is on techniques and algorithms for 3D machine vision. The topics include image sensing of 3D scenes, a review of 2D techniques, image segmentation, stereo vision, optical flow, time-varying image analysis, shape from shading, texture, depth from defocus, matching, object recognition, shape representation, interpretation of line drawings, and representation and analysis of 3D range data. The course includes programming projects on industrial applications of robot vision.

3 credits, Letter graded (A, A-, B+, etc.)

**ESE 570: Bioelectronics**

Origin of bioelectric events; ion transport in cells, membrane potentials; neural action potentials and muscular activity; cortical and cardiac potentials. Detection and measurement of bioelectric signals; impedance measurements used to detect endocrine activity, perspiration, and blood flow; impedance cardiology; vector cardiology; characteristics of transducers and tissue interface; special requirements for the amplification of transducer signals.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**ESE 571: Introduction to Auto ID Technologies**

This new introductory course is a series of Auto ID systems, technologies and applications. The course covers theory and applications of important data-capture technologies, namely, barcodes, biometrics and RFID. Topics to be covered include: architecture of data-capture/ Auto ID system, barcodes: overview of 1-D and 2-D barcodes and other LOS technologies; biometrics: fingerprints, iris-scan, voice recognition and smart-cards; radio frequency identification (RFID): fundamentals, near-field vs. far-field, UHF read range estimation, reader sensitivity limits, tag singulation and multiple access protocols, standards, privacy and security issues in RFID, real time location systems (RTLS), and wireless sensor networks.

**Prerequisites:** ESE 372, ESE 218, ESE 305

3 credits, Letter graded (A, A-, B+, etc.)

**ESE 575: Advanced VLSI Signal Processing Architecture**

This course is concerned with advanced aspects of VLSI architecture in digital signal processing and wireless communications. The first phase of the course covers the derivation of both data transformation and control sequencing from a behavioral description of an algorithm. The next phase reviews the general purpose and dedicated processor for signal processing algorithms. This course focuses on low-complexity high-performance algorithm development and evaluation, system architecture modeling, power-performance tradeoff analysis. The emphasis is on the development of application-specific VLSI architectures for current and future generation of wireless digital communication systems. An experimental/research project is required.

3 credits, Letter graded (A, A-, B+, etc.)

**ESE 580: Microprocessor-Based Systems Engineering**

This course is a study of methodologies and techniques for the engineering design of microprocessor-based systems. Emphasis is placed on the design of reliable industrial quality systems. Diagnostic features are included in these designs. Steps in the design
cycle are considered. Specifically, requirement definitions, systematic design implementation, testing, debugging, documentation, and maintenance are covered. Laboratory demonstrations of design techniques are included in this course. The students also obtain laboratory experience in the use of microprocessors, the development of systems, circuit emulation, and the use of signature and logic analyzers. 

Fall, 4 credits, Letter graded (A, A-, B+, etc.)

ESE 581: Microprocessor-Based Systems Engineering II
This course is a study of methodologies and techniques for the engineering design of microprocessor-based systems. Emphasis is placed on the design of reliable industrial quality systems. Diagnostic features are included in these designs. Steps in the design cycle are considered. Specifically, requirement definitions, systematic design implementation, testing, debugging, documentation, and maintenance are covered. Laboratory demonstrations of design techniques are included in this course. The students also obtain laboratory experience in the use of microprocessors, the development of systems, circuit emulation, and the use of signature and logic analyzers.

Spring, 4 credits, Letter graded (A, A-, B+, etc.)

ESE 585: Nanoscale Integrated Circuit Design
This course describes high performance and low power integrated circuit (IC) design issues for advanced nanoscale technologies. After a brief review of VLSI design methodologies and current IC trends, fundamental challenges related to the conventional CMOS technologies are described. The shift from logic-centric to interconnect-centric design is emphasized. Primary aspects of an interconnect-centric design flow are described in four phases: (1) general characteristics of on-chip interconnects, (2) on-chip interconnects for data signals, (3) on-chip power generation and distribution, and (4) on-chip clock generation and distribution. Existing design challenges faced by IC industry are investigated for each phase. Tradeoffs among various design criteria such as speed-power-noise-area are highlighted. In the last phase of the course, several post-CMOS devices, emerging circuit styles, and architectures are briefly discussed. At the end of the course, the students will have a thorough understanding of the primary circuit and physical level design challenges with application to industrial IC design.
GRADUATE COURSE DESCRIPTIONS

Fall 2011

Fall, 1-9 credits, S/U grading
May be repeated for credit.

ESE 700: Dissertation Research off Campus - Domestic
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place off-campus, but in the United States and/or U.S. provinces. Please note, Brookhaven National Labs and the Cold Spring Harbor Lab are considered on-campus. All international students must enroll in one of the graduate student insurance plans and should be advised by an International Advisor.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

ESE 701: Dissertation Research off Campus - International
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place outside of the United States and/or U.S. provinces. Domestic students have the option of the health plan and may also enroll in MEDEX. International students who are in their home country are not covered by mandatory health plan and must contact the Insurance Office for the insurance charge to be removed. International students who are not in their home country are charged for the mandatory health insurance. If they are to be covered by another insurance plan they must file a waiver by second week of classes. The charge will only be removed if other plan is deemed comparable.
All international students must received clearance from an International Advisor.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

ESE 800: FULL TIME SUMMER RESEARCH
May be repeated for credit.

ESL

English as Second Language

ESL 591: Intermediate Oral/Aural Skills Class
The purpose of this course is to do intensive work in aurals and oral language skills. Emphasis is on the segmental level: vowel/consonant work, syllable work and word stress as well as rhythm on the sentence level. Summarizing and questioning are practiced with work on learning styles. Students' awareness of American teaching and cultural patterns are stressed. Observing American professors and students in class is encouraged. A student will receive a diagnostic assessment of her/his language segmental and suprasegmental difficulties from the instructor and is expected to work on improvement in these speech areas both in the classroom and independently in the language laboratories. Successful completion (A- or higher) of the course leads to ESL 598; B+ or below leads to ESL 596.

ESL 593: Advanced Composition
Advanced training in writing for ESL students who need to concentrate on paragraph development. The first half of the semester deals with paragraph construction, stressing concepts of the main thesis and supporting arguments. Some advanced grammar is reviewed, but the assumption is that basic structures and mechanics of writing have already been mastered. The second half of the semester stresses combining paragraphs into short compositions. Both descriptive and argumentative writing are practiced. Diagnostic test during first week of classes determines placement in the course. A through C/Unsatisfactory grading only.

ESL 596: High Intermediate Oral/Aural Skills Class
The emphasis of this course is threefold: developing language skills, teaching skills and cultural awareness. Language skills will focus on sentence stress, phrasing, linking and pausing with field specific language practice. Teaching skills stressed include questioning techniques for discussion and assessment, leading effective discussions assessing student learning. The cultural awareness focuses on idioms, American cultural values and norms as well as non-verbal communication. Successful completion of this course (B or higher) leads to ESL 598.

ESL 598: ESL 598 Advanced Oral/Aural Skills Class
This course further develops language skills at the supra segmental level, teaching skills, cultural awareness and presentation skills. Intonation is taught with self-monitoring strategies. The teaching skills examine strategies for introducing yourself, your syllabus, explaining a visual, defining terms, giving presentations and giving successful lectures. Analysis of presentations is given to each student throughout the semester. Cultural awareness is centered on some assumptions affecting teaching in the American classroom. Success completion of this course (A or better) clears the student from the oral/aural ESL requirements.

ESL 598: ESL 598 Advanced Oral/Aural Skills Class
3 credits, Letter graded (A, A-, B+, etc.)

ESM

Materials Science

ESM 501: Teaching and Mentoring Techniques
Discussion of various phases of teaching, including preparation, classroom technique, and student evaluation. Also exploration of skills and understanding necessary for mentoring of undergraduates and others involved in research.

ESM 502: Scanning Electron Microscopy Skills
Practical introduction to the operation of scanning electron microscopes, including energy-dispersive X-ray spectrometers. Required of all students who use the SEM in their research.

ESM 503: Electron Diffraction
A quantitative discussion of electron diffraction as a means of micro-characterization of materials and as a basis for understanding image contrast in the transmission electron microscope. Topics covered include atomic, kinematical, and dynamical scattering; indexing diffraction patterns; and convergent-beam diffraction.

ESM 508: Impact of Materials on Environment
This course will focus on several concepts underlying the impact of materials on the environment and various methods of minimizing them. More specifically, this course will explore the concepts of air and water pollution associated with product manufacturing, various concepts of hazardous materials impact on human health, several topics of sustainable developments and selected methods of contaminated water and air treatment. Additionally, this course will be addressing the issues of how to minimize the environmental pollution by product substitution and by decreasing the energy input into materials production. It will also give an overview of the concepts of green chemistry, green engineering and industrial ecology.

ESM 511: Thermodynamics of Solids

3 credits, Letter graded (A, A-, B+, etc.)

ESM
Current knowledge regarding the thermodynamic properties of condensed phases is discussed. The thermodynamic treatment of ideal, regular, and real solutions is reviewed. Estimation of reaction-free energies and equilibria in condensed phase reactions such as diffusion, exication, and phase transformations; thermodynamic analysis of phase equilibria diagrams.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**ESM 512: Structure of Materials**

The structure of solids can be studied using X-ray, neutron, and electron diffraction techniques. Topics covered are coherent and incoherent scattering of radiation, structure of crystalline and amorphous solids, stereographic projection and crystal orientation determination, the concept of reciprocal vector space. Laboratory work in X-ray diffraction is also included.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**ESM 513: Strength of Materials**

A unified approach for all solid materials will be used with regard to the correlation between microstructure and their macroscopic mechanical properties. The course deals with various testing techniques for delineating mechanical properties of materials, considering elasticity, inelasticity, plasticity, dislocation theory, cohesive strength, fracture, and surface wear. Attention is given to strengthening mechanisms for solids, metals, ceramics, and polymers.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**ESM 514: Technical Writing for Materials Scientist**

Students will examine writing as it appears in published and draft format, taking into account different audience needs. Processes we will cover include: planning, organizing, writing, review, editing and rewriting. Grammer issues, particularly those that challenge non-native speakers, will also be addressed. We will be working with Professor Gerald Graff's idea of "They Say/I Say," a cornerstone strategy working with Professor Gerald Graff's idea of "They Say/I Say," a cornerstone strategy to engage their peers in the discussion of ideas and equilibria in condensed phase reactions such as diffusion, exication, and phase transformations; thermodynamic analysis of phase equilibria diagrams.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**ESM 521: Diffusion in Solids**

Kinetics and Transformations I changed to Diffusion in Solids. Atomistic rate processes in solids with emphasis on diffusion in crystals. Theory of diffusion and experimental techniques; the role played by a broad class of crystalline imperfections. Topics include annealing of deformed materials, kinetics of defect interactions, thermally controlled deformation, kinetics of nucleation and growth, solidification, and precipitation.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**ESM 522: Imperfections in Crystals**

The characteristics of point defects in metals, semiconductors, and ionic solids are described, and the thermodynamics of point defects is developed. Dislocation theory is introduced and the structures of internal boundaries are described. Finally, interactions between lattice imperfections are discussed, with emphasis on plasticity and fracture.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

**ESM 523: Solid-State Electronics**

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**ESM 531: Phase Transformations**

Kinetics and Transformations II changed to Phase Transformations. A review of the processes by which structures are changed in the solid state. Classical nucleation theory including homogeneous and heterogeneous mechanisms. Diffusion and diffusionless growth mechanisms. Transformation kinetics.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

**ESM 532: Materials Processing**

A study of manufacturing processes used in the semiconductor industries. Topics include single crystal growth, compound formation, zone refining, epitaxial growth, doping techniques, thin film techniques, thick film techniques, passivations, isolations, lead bonding techniques, cleaning and etching, and failure analysis; discrete devices and integrated circuit devices; various modern concepts in IC processing.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**ESM 533: Polymeric Materials**

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**ESM 534: Advanced Laboratory**

Students perform a series of advanced materials experiments which involve some independent research. The results are then written in a report suitable for publication in a journal or proceeding.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**ESM 537: Cellular Interactions**

This course is intended to introduce cellular and biological concepts and principles for graduate students in chemical engineers related to their research projects that involve cellular interactions with materials as possible scaffolds in bioengineering. This course may be counted as either CSE 370 or ESM 537.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

**ESM 542: Modern Electron Microscopy**

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**ESM 543: Engineering Ceramics**

The characterization of ceramics is reviewed with special reference to advanced engineering ceramics, bulk high-temperature superconductors, and ceramic magnets. Typical microstructures and thermal, mechanical, and electrical properties are compared. These properties are related to the various methods of processing.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

**ESM 550: Introduction to Homeland Security**

The course is a combination of lectures and laboratory experience to introduce students to critical issues and assess needs for homeland security. The course includes invited lectures by experts on special topics such as fundamentals of nuclear, chemical, and biological weapons and the associated threat to the transportation of goods and the public. The students will learn about cyber security, devices to safeguard materials from terrorist threats, safety of nuclear power plants and water supply, forensics and emergency...
preparedness. The students will submit a term paper on a selected topic in lieu of the final exam.

Prerequisite: undergraduate level biology, chemistry and physics. 
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

ESM 553: Nuclear Safeguards and Security

The course is intended to familiarize students with the fundamentals of nuclear physics, radiation, mining, weapons and fuel cycle, other than producing electricity, as it pertains to nuclear power plants. Topics include nuclear detection, devices to safeguard nuclear materials from terrorist threats, needed physical protection for safe handling and its relevance to Homeland Security. The course combines lectures with hands-on experience at the newly installed nuclear detection facility located at the nearby United States Department of Energy’s Brookhaven National Laboratory.

Prerequisite: undergraduate equivalent physics and chemistry. 
Fall, 4 credits, Letter graded (A, A-, B+, etc.)

ESM 554: Chemical & Biological Weapons: Safeguards and Security

This course deals with the fundamentals of chemistry and biochemistry related to chemical weapons (CW) and biological weapons (BW) that could be used by terrorists. Topics include CW and BW history, production, control, detection, identification, and emergency response measures to deal with intended or unintended release and escape, and security measures to protect and control stockpiles.

Prerequisite: Undergraduate equivalent chemistry, biochemistry, and microbiology. 
Fall, 4 credits, Letter graded (A, A-, B+, etc.)

ESM 555: Synchrotron Techniques in Materials Science

A short course in a selected synchrotron analytical technique as applied to problems in Materials Science. May include demonstration and hands-on experience at the national synchrotron light source at Brookhaven National Laboratory, and synchrotron safety training.

1 credit, Letter graded (A, A-, B+, etc.)

ESM 560: Risk Assessment, Regulation, and Homeland Security

The course focus is on risk assessment associated with nuclear, chemical and biological weapons as it relates to Homeland Security. Topics include air dispersion, uncertainty analysis, exposure measurements, epidemiology, toxicology, regulatory issues, risk management, risk communication, risk perception, and risk preparedness. The course will also cover laws and regulation, and disaster preparedness, various acts passed by the U.S. Congress to regulate water, air, and controlled substances.

Prerequisite: undergraduate or equivalent physics, math and chemistry. 
Fall, 4 credits, Letter graded (A, A-, B+, etc.)

ESM 561: Crystal Growth Technology

The main goal of this course is to introduce graduate students to the fundamentals and physical principles that govern the process of crystal growth and show them how to apply those principles to design and engineer growth systems for different crystalline materials. While microscopic theory of nucleation and growth kinetics will be an essential part of this course, its core will mainly focus on applying transport phenomena and thermodynamics of chemical reactions to the design of processing reactors. As part of the academic requirements associated with this course, students will form teams and work on the virtual design of crystal growth reactors using software packages for transport phenomena modeling.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

ESM 565: The Material World

The evolution of the Material World starting from the Big Bang, the creation of stars and galaxies, the nucleosynthesis of the elements in supernova explosions, formation of the Earth and Solar System, human adaptation of Earth resources to create the Modern World will be discussed. In this process we will discover the fundamental laws governing material behavior and explore the cosmic significance of our existence.

3 credits, Letter graded (A, A-, B+, etc.)

ESM 599: Research

Fall and Spring, 1-12 credits, S/U grading May be repeated for credit.

ESM 600: Seminar in Surface Science

Discussions and reading on current problems in surface physics, chemistry, and crystallography.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

ESM 602: Seminar in Plasticity and Fracture

Intended for advanced students, especially those doing research in the area. Topics: detailed description of defects and their relations to mechanical structure; dislocation theory; plasticity and yield criteria; creep and fatigue; microscopic theory of fracture including ductile and brittle behavior and the relationship of plastic flow to cleavage.

3 credits, Letter graded (A, A-, B+, etc.)

ESM 604: Seminar in Ultrasonic Methods and Internal Friction in Solids

Review of advanced measurement techniques in the field of ultrasonics coupled with quantitative descriptions of experimental variables related to the sample microstructure. Applications to optical, electrical, and mechanical properties are discussed. Use of ultrasonics for nondestructive evaluation is considered.

Prerequisite: ESM 513

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

ESM 605: Advanced Diffraction Techniques

Advanced topics in diffraction theory including the dynamical theory in perfect and imperfect crystals and its applications in imaging methods. Other topics from the following list are pursued if time is available: EXA FS/EXELFS/SEXAFS; LEED/RHEED; small-angle scattering; Kossel line and electron channeling patterns; convergent beam diffraction; phonon scattering; glancing incidence X-ray diffraction; diffraction from defect structures; colored symmetry; holography.

Prerequisites: ESM 512 or permission of instructor

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

ESM 606: Seminar in Optical Properties of Material

A survey of modern optical materials and their characterization. The properties of both glasses and crystalline materials are related to physical origin. Electro-optic, elastooptic, and magneto-optic properties and their interrelations are related to applications in technology including laser systems, displays, and spectroscopy.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

ESM 608: Seminar in Catalysis

Fall, 3 credits, Letter graded (A, A-, B+, etc.)
ESM 610: Seminar in Reactions in Inorganic Solids
*Fall, 3 credits, Letter graded (A, A-, B+, etc.)*

ESM 612: Seminar in Advanced Thermodynamics of Solids
The fundamentals of the thermodynamics of irreversible processes are presented and the theory applied to thermal diffusion, thermoelectric transport, and other coupled processes in solids. Thermodynamics of multicomponent phase equilibria. Diffusion, oxidation, and other rate processes in ternary and higher-order systems.
*Prerequisite: ESM 511 Spring, 3 credits, Letter graded (A, A-, B+, etc.)*

ESM 613: Seminar in Materials and Environment
Interactions between materials and their environments including corrosion, oxidation, absorption, and adsorption reactions. The influence of these reactions on the properties of materials, the design of materials resistant to these phenomena, alternative methods of protection, and the utilization of these reactions in promoting breakdown and deterioration of materials.
*Spring, 3 credits, S/U grading*

ESM 614: Seminar in Diffusion in Solids
Diffusion in solids is considered in detail, including solution of the transport equations for volume, grain boundary, and surface diffusion. Kirkendall effect and other diffusion phenomena, atomic mechanisms of diffusion, correlation effects, etc. Next, the theory of processes in which diffusion plays an important role is considered, such as ionic conduction, oxidation of metals, and the sintering of solids.
*Spring, 3 credits, S/U grading*

ESM 615: Seminar in Phase Transformations
The theory of phase transformations in solids is considered. Kinetics and mechanisms of nucleation and growth and martensitic transformations. Melting and solidification, precipitation from solid solution, polymorphic transformations, eutectic and eutectoid reactions, second-order transitions, recrystallization, and other transformations in solids.
*Fall, 3 credits, S/U grading*

ESM 694: Tutorials in Special Topics in Materials Science
Supervised reading and discussion of selected publication in particular fields of materials science. This course is designed primarily for advanced graduate students who are, or expect to be involved in research in these areas, although other students may enroll with permission of the instructor.
*Fall and Spring, 0-3 credits, Letter graded (A, A-, B+, etc.) May be repeated for credit.*

ESM 695: Graduate Internship
Participation in private corporations, public agencies, or non-profit institutions for ongoing research activities related to thesis research. Students will be required to have a faculty coordinator as well as a contact in the outside organization, to participate with them in regular consultations on the project, and to submit a final report to both. Not accepted for credit toward the M.S. degree.
*1-3 credits, S/U grading May be repeated for credit.*

ESM 696: Special Topics in Materials Science
Supervised reading and discussion of selected publications in particular fields of Materials Science. This course is designed primarily for advanced graduate students who are, or expect to be, involved in research in these areas, although other students may enroll with permission of the instructor.
*Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.) May be repeated for credit.*

ESM 697: Materials Science Colloquium
A weekly series of lectures and discussions by visitors, local faculty, and students presenting current research results.
*Fall and Spring, 0-3 credits, S/U grading May be repeated for credit.*

ESM 698: Practicum in Teaching
*Fall and Spring, 0-3 credits, S/U grading May be repeated for credit.*

ESM 699: Dissertation Research on Campus
Prerequisite: Advancement to candidacy (G5). Major portion of research must take place on SBU campus, at Cold Spring Harbor, or at the Brookhaven National Lab.
*Fall, 1-9 credits, S/U grading May be repeated for credit.*

ESM 700: Dissertation Research off Campus - Domestic
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place off-campus, but in the United States and/or U.S. provinces. Please note, Brookhaven National Labs and the Cold Spring Harbor Lab are considered on-campus. All international students must enroll in one of the graduate student insurance plans and should be advised by an International Advisor.
*Fall, 1-9 credits, S/U grading May be repeated for credit.*

ESM 701: Dissertation Research off Campus - International
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place outside of the United States and/or U.S. provinces.
*Domestic students have the option of the health plan and may also enroll in MEDEX. International students who are in their home countries are not covered by the mandatory health plan and must contact the Insurance Office for the insurance charge to be removed. International students who are not in their home countries are charged for the mandatory health insurance. If they are to be covered by other insurance plans they must file waivers by the second week of classes. The charge will only be removed if the other plans are deemed comparable. All international students must receive clearance from an International Advisor.
Fall, 1-9 credits, S/U grading May be repeated for credit.*

ESM 800: FULL TIME SUMMER RSH
May be repeated for credit.

ESS

Earth and Space Sciences

ESS 502: An Earth Systems Perspective on Long Island’s Future
Each time this course is offered we will study in great detail teh reasons for given earth system constraint and the consequences for Long Island’s natural and developed areas. Such a constraint might be peak production of oil, groundwater pollution, global climate change, etc. This evening seminar course is repeatable by permission only.
ESS 511: Pine Barrens Sustainability
The ecologically diverse Long Island Pine Barrens region provides a habitat for a large number of rare and endangered species, but faces challenges associated with protection of a natural ecosystem that lies in close proximity to an economically vibrant urban area that exerts intense development pressure. In this course we will consider the interaction of the ecological, developmental and economic factors that impact the Pine Barrens and the effectiveness of decision support systems in promoting sustainability of the Pine Barrens.

3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

ESS 522: The Planets
A general survey of present knowledge of the planets, satellites, interplanetary medium, comets, asteroids, and outer regions of the sun. Begins with a historical introduction and discussion of the methods of science. Emphasizes current NASA deep-space exploration missions and other modern astronomical methods. Research report required. Prerequisite: MAT 123 and PHY 119

Offered
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

ESS 523: Collisions in the Solar System
A discussion of the evidence that comet and asteroid impacts have played a significant part in the evolution of the Earth, and other planets of the solar system, as well as an assessment of the actual and perceived hazard posed by terrestrial impacts and discussion of what can be done about it. Research report required. Co-scheduled with AST 301 Collisions in the Solar System Prerequisites: MAT 123 and PHY 119

Offered
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

ESS 524: The Universe
The origin, evolution, and ultimate fate of the universe. The course begins with a historical approach with emphasis on the evolution of cosmological ideas from geocentric universes to the Big Bang. Consideration of the evolution of the universe from the earliest moments after the Big Bang to the distant future, including the formation of the galaxies, stars, and planets. Research report required. Co-scheduled with AST 304 The Universe.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

ESS 526: Atmospheric Fundamentals
This course considers: the principles of atmospheric thermodynamics to assess adiabatic and saturated adiabatic processes; the concepts of radiative transfer such as blackbody radiation, scattering, absorption, and emission by molecules and particles will be discussed; tropospheric and stratospheric chemistry with its subsequent effects on air pollution and chemical cycles; meteorological physical concepts such as geostrophic and gradient winds, and general circulation; and the microphysics of cloud formation and precipitation. Research report required. Prerequisites: MAT 123 and PHY 119

Offered
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

ESS 532: Principles of Weather Analysis and Forecasting
This course explores the fundamental physical processes associated with various weather phenomena: tropical cyclones, extratropical cyclones, fronts, convective storms, and local air-sea and mountain flows. The latest analysis techniques, datasets, and tools will be used to understand the climatology and structural evolution of these weather phenomena. Basic forecasting techniques will be applied using observations and numerical model output. Research report required. Prerequisite: ESS 532

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

ESS 534: Air Pollution and Control
This course provides an overall picture of air pollution caused by gas phase species and airborne particulate matter. The sources of air pollution and the transport of air pollutants will be discussed. We will study the underlying chemical processes which can lead to the formation of secondary air pollutants. Their effect on an urban, regional, and global scale and on human health will be assessed. National and international air quality policy regulations will be discussed. The causes and consequences of the stratospheric ozone hole will be outlined. The international efforts in form of policy protocols to stop stratospheric ozone depletion will be discussed. The natural greenhouse effect will be introduced and our current understanding of global warming will be presented. Research report required. Prerequisites: CHE 123/131, MAT 123 and PHY 119

Offered
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

ESS 536: Principles of Weather Analysis and Forecasting
This course explores the fundamental physical processes associated with various weather phenomena: tropical cyclones, extratropical cyclones, fronts, convective storms, and local air-sea and mountain flows. The latest analysis techniques, datasets, and tools will be used to understand the climatology and structural evolution of these weather phenomena. Basic forecasting techniques will be applied using observations and numerical model output. Research report required. Prerequisite: ESS 532

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

ESS 542: Tectonic Environment
Determining positions on earth, including use of maps; recognition, description and origin of structural features of the earth's crust and interior; using seismic data to locate earthquakes and describe the earth material through which seismic waves travel; and understanding the role of plate tectonics in the earth's geologic evolution. Instruction will include lectures and laboratory exercises. Research report required. Four hours per week.

Offered
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

ESS 543: Rocks and Minerals
Identification, properties, formation and occurrence of rock-forming minerals: characterizing igneous, sedimentary and metamorphic rocks including the diverse geologic settings in which they occur with emphasis on their occurrence in the Metropolitan New York area. Instruction will include lectures and laboratory exercises. Research report required. Four hours per week.

Offered
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

ESS 544: Geology of New York
The course will explore: (1) the development of the geological terranes during the Grenville, Taconian, Acadian and Alleghenian orogenies; (2) the effects of late Proterozoic and Mesozoic rifting; and (3) Pleistocene glaciation. These will be considered in the context of plate tectonics and global geology. Instruction will include, lectures, two full-day field trips. Research report required. Three hours per week.

Offered
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

**EST 585: Directed Studies**

Special studies directed by various faculty members to be taken for variable and repetitive credit.

Fall, 1-3 credits, Letter graded (A, A-, B+, etc.)

*May be repeated for credit.*

**EST 589: Research for Earth Science Teachers**

This course is intended to provide science teachers or graduate students in the Science Education program an opportunity to obtain research experience. A written report is required.

*Fall, 1-3 credits, Letter graded (A, A-, B+, etc.)*

*May be repeated for credit.*

**EST 600: Practicum in Teaching**

For MAT Earth Science students

*Fall, 0-3 credits, S/U grading*

**EST 601: Topics in Earth and Space Sciences**

Fall, 1-3 credits, Letter graded (A, A-, B+, etc.)

*May be repeated for credit.*

**EST Technology and Society**

**EST 520: Computer Applications and Problem Solving**

A problem-solving course for professionals who use applications software to address administrative and managerial problems. Students develop skills in planning, forecasting, and MIS requirements. The major applications software packages used are Excel and Access. Students learn to create advanced-level spreadsheets and data files, and use them to find optimal solutions to problems in all professions.

*Summer, 3 credits, Letter graded (A, A-, B+, etc.)*

**EST 530: Internet Electronic Commerce**

Topics addressed in this course include: technology infrastructure, business models and concepts, technological skills needed to build an E-Commerce web site, marketing, communications, security and encryption, payment systems in E-Commerce/M-commerce. Financial transactions, advertising models, content ownership and the prospects for E-Commerce are also covered.

*Summer, 3 credits, Letter graded (A, A-, B+, etc.)*

**EST 546: Financing A Low Carbon Society**

The sums involved in a shift to a low-carbon society are daunting but not impossible to achieve. The world is planning to invest over $15 trillion in fixed-asset investments in the next 10 years. Rather a problem of capital generation, the key challenge of financing the transition towards a low carbon society is to redirect existing and planned capital flows from traditional high-carbon to low-carbon investments. This course is designed to allow students to: (1) Review a number of public policies, public finance mechanisms and market-based instruments designed to shift investments from fossil fuels to more climate friendly alternatives over the past few years; (2) Gain knowledge of the global commercial, political, innovation and technological challenges and opportunities in the transition to a low-carbon society; (3) Develop and practice professional skills in raising and spending public finance to catalyze capital towards low carbon and climate resilient development; and (4) Develop and practice professional skills in accessing carbon finance and designing innovative financing instruments.

This course is aimed at engineering students who are interested in the energy challenges in a carbon-constrained world and their implications to technology innovation; at business- and public-administration students and at mid-career professionals who want to develop innovative financing solutions to real-world energy and environmental problems.

*Summer, 3 credits, Letter graded (A, A-, B+, etc.)*

**EST 547: Advanced Problems in Integrated Planning: Theory, Practice, and Analytical Tools**

This course explores in depth new theories and practical applications of integrated planning through the lens and land use, transportation and urban infrastructure systems. A series of problem sets is undertaken in close coordination with the instructor to produce a portfolio of networked research which, with further research, can be publishable quality.

*Offered*

*Summer, 3 credits, Letter graded (A, A-, B+, etc.)*

*May be repeated for credit.*

**EST 550: Introduction to Homeland Security**
EST 553: Nuclear Security
The course will familiarize students with the fundamentals of nuclear physics, radiation, mining, weapons and fuel cycle, other than producing electricity, as it pertains to nuclear power plants. Topics include nuclear detection, devices to safeguard nuclear materials from terrorist threats, needed physical protection for safe handling and its relevance to Homeland Security. The course combines lectures with hands-on experience at the newly installed nuclear detection facility located at the nearby United States Department of Energy's Brookhaven National Laboratory. Prerequisite: Undergraduate equivalent physics and chemistry.
Fall, 4 credits, Letter graded (A, A-, B+, etc.)

EST 554: Chemical & Biological Weapons: Safeguards and Security
This course deals with the fundamentals of chemistry and biochemistry related to chemical weapons (CW) and biological weapons (BW) that could be used by terrorists. Topics include CW and BW history, production, control, detection, identification, and emergency response measures to deal with intended or unintended release and escape, and security measures to protect and control stockpiles. Prerequisite: Undergraduate equivalent chemistry, biochemistry, and microbiology.
Fall, 4 credits, Letter graded (A, A-, B+, etc.)

EST 560: Risk Assessment, Regulation, and Homeland Security
The course focus is on risk assessment associated with nuclear, chemical and biological weapons as it relates to Homeland Security. Topics include air dispersion, uncertainty analysis, exposure measurements, epidemiology, toxicology, regulatory issues, risk management, risk communication, risk perception, and risk preparedness. The course will also cover laws and regulation, discouraging terrorism, and disaster preparedness, various acts passed by the U.S. Congress to regulate water, air, and controlled substances. Offered as EST 560 or HPH 656.
Prerequisite: Undergraduate or equivalent physics, math and chemistry.
Fall and Spring, 4 credits, Letter graded (A, A-, B+, etc.)

EST 562: Decision Support Systems
A decision support system (DSS) is a computer system that combines, data, analytical tools, and models to support decision making. A DSS may be model-driven or data-driven. A model-driven DSS is a stand-alone system that uses some type of model to perform #what-if# and other kinds of analysis. A data-driven DSS is a system that supports decision making by allowing users to extract and analyze useful information that was previously buried in large databases. In this course, both model-driven and data-driven decision support services will be considered. Students will identify an appropriate engineering or management application. By collecting relevant data, building suitable mathematical models, designing an accessible user interface, and connecting these components via computer code, students will develop a deliverable DSS. Through a series of presentations, they will demonstrate how their DSS addresses the stated engineering or management problem. In doing so, students will gain insight into the interrelationships among information systems, statistics and management science.
Prerequisite: EMP 504 or permission of instructor
Fall, Spring, 3 credits, Letter graded (A, A-, B+, etc.)

EST 563: Computer Literacy for Educators
This course is an introduction to computer and software basics and was formally listed as EST 583. Students will develop an understanding of the underlying concepts and principles behind computers. Students will gain sufficient knowledge to successfully navigate the digital world. Emphasis will focus on computer literacy areas used in education and other professional environments. Students will leave this course with the ability to grasp the risks and benefits surrounding new and current computer technologies. The following skills will be addressed; electronic communication, application-based projects, information management, assessment, and the societal impacts of computer based technologies. Students having completed EST 563 in a prior semester can not receive credit for EST 563.

EST 565: Instructional Technologies
This course examines issues in teaching and learning, especially the use of personal computers and emerging technologies to investigate unique types of learning that are made possible, or may be more efficient, with this technology. Exposure to generic software applications, and an overview of commercial software titles and applications are provided. Students have the opportunity to work collaboratively with others in this field, and will develop a working application that could be used in an educational environment.
Prerequisite: EST 563 or permission of instructor
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

EST 567: The Internet and Networking for E-Learning
Students will learn the basic design concepts behind the Internet, as well as wired and wireless communication networks. Students learn effective use of the Internet and networks for active learning. Discussion topics include: the role of the Internet as a 21st century global communication tool, ethical and societal issues as they relate to educational standards, and how to judge the benefits and risks associated with these networks. This course was formerly listed as EST 572. Not for credit if you have already taken EST 572.
Prerequisite: Computer experience.
Fall, Spring, 3 credits, Letter graded (A, A-, B+, etc.)

EST 568: Networked Communication Technologies
EST 568 Network Communication Wired and Wireless
This course examines the range of technologies used in teaching, learning, and communication. Instructional technologies both stand-alone and networked are surveyed with a focus on how they can be used effectively to enhance learning. Students will learn fundamental hardware and software principles underlying the development of the Internet and other networked communications tools. Emphasis will be placed on assessment of these technologies in terms of societal impacts and learning outcomes. This course combines topics from EST 565 and EST 567.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

EST 569: Technology in the City
Will technology transform our cities, making them more livable, efficient, and desirable? Will technology erode our cities, making them
more dangerous, chaotic, and insufferable? This course is at the intersection of two trends. First, the world is undergoing a wave of urban growth. Second, the pace of technological change is quickening and, with it, the pace of social change and even social transformation. Course modules will cover technology and society in urban contexts with particular attention to: 1) energy, 2) environments, 3) transportation, and 4) health and human safety (including security). This class will involve trips to sites in New York City, and will involve the use of IT technologies in creative ways to advance our learning.

Offered
Fall, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

EST 570: Design of Courseware
Principles of designing courseware modules for K-12 schools, universities, and industry. Educational technologies used in courseware. Theories of learning and educational policy making. Courseware design specification. Each student will develop a courseware design specification that can be implemented for his/her master's project.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

EST 571: Research Methodologies for Educational Technologies
This course evaluates the educational uses of computer technology. Course goals include understanding research methodology and literature, conducting a research study of educational technology, developing professional leadership skills and exploring micro-worlds and constructivism. The course includes class discussions to assess the quality of research articles on educational technology. Prerequisite: EST 565

Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)

EST 573: Design of Multimedia Courseware
This course was designed for school teachers, corporate trainers, and multimedia specialists who are interested in the use of multimedia design techniques as a teaching tool. The class is half lecture and half hands-on training in multimedia production tools. Students have a term project for which they have to create a courseware program. Prerequisite: EST 565 or permission of instructor. Co-requisite: EST 570 or permission of instructor

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

EST 574: Distance Education
Web-based distance learning applications are quickly growing within Higher Education institutions, K-12 schools, and corporate environments. This course is designed for higher education faculty, K-12 administrators and teachers, educational computing coordinators, and corporate training personnel who would like to investigate ways to enhance their educational systems through the development and implementation of E-learning applications. The focus of this course is on the design and implementation of effective modes of E-learning.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

EST 575: Developing Grants and Managing Projects
This course will develop the skills necessary to take a program proposal from idea through reality with an emphasis on new technological resources available to help with this process. Topics include: techniques for successful fundraising, grant writing, program design, staffing, publicity and outreach, and reporting and evaluation. It is designed for current educators and administrators as well as students about to enter the education, social service and health fields.

3 credits, Letter graded (A, A-, B+, etc.)

EST 576: Geographic Information Systems in Education and Research
Students use Geographic Information Systems (GIS) software to create, manipulate and interpret layers of interactive maps and databases. Students collect and modify geographical materials from the Internet, satellite and aerial imagery, and field data. They design and test scientific inquiry-driven educational modules and/or visualizations for research and analysis on global and local geography, for use in economics, earth science, politics and civic action, history and sociology, global studies, and environmental planning and assessment. Prerequisite: EST 565 or EST 595 or permission of instructor. Spring, 3 credits, Letter graded (A, A-, B+, etc.)

EST 577: Environmental Information Systems (EIS)
Due to the complex nature of environmental and spatial data, these systems require state-of-the-art computer technology to achieve environmental science and information technology. This course will address the technical and conceptual bases of data capture, data storage, data analysis and decision support, and metadata management. Environmental Information Systems are concerned with the management of data about the rock of soil, the water, the air, and the species around us. Spring, 3 credits, Letter graded (A, A-, B+, etc.)

May be repeated for credit.

EST 578: Human-Computer Interaction Design for Construction
Principles of human-computer interaction applied to the design of educational courseware. Usability engineering, with a focus on the audience and learning objectives. Interface design principles. Human computer dialogs. Multimedia as a communication tool, using images, audio and video. Multimodal input devices and strategies. Students will use a multimedia authoring tool to create a prototype of an educational application or learning tool.

3 credits, Letter graded (A, A-, B+, etc.)

EST 579: Educational Games
Simulations and computer games as a learning tool. Traditional game and simulation genres, and their appropriate uses in education. Gameplay design. Game development process, from storyboarding to delivery. Assessing games as learning tools. Students will use a multimedia tool to prototype an educational game or simulation of their own design.

3 credits, Letter graded (A, A-, B+, etc.)

EST 580: Advanced Technology Assessment: Business, Government and Strategy
This course has a two-fold objective: (1) to help students develop strong conceptual foundations for understanding and addressing issues at the intersection of science, technology, public policy, and business strategy; and (2) to provide students with knowledge of analytical frameworks and tools that are essential to technology assessment in business, government, and government, and other organizations with understanding of their strengths, limitations, and underlying assumptions. Topics covered include utility/profit maximization theory, its limitations and alternative theories, business and government interactions, technology innovation and management, technology forecasting, impact assessment, technology valuation, and basic tools for technology assessment (monitoring, simulation, expert opinion, scenario analysis, cost-benefit analysis, AHP method, etc.).

Summer, 3 credits, Letter graded (A, A-, B+, etc.)
EST 581: Methods of Socio-Technological Decision Making
Focus is on the application of decision-making techniques to analyze problems involving technology, particularly its social impacts. Areas of study include decision making under uncertainty, decision making in a passive vs. active environment, sequential decisions, estimating payoffs, forecasting, and technology assessment. These systems-analysis techniques are used to formulate and solve a variety of socio-technological problems, especially those that arise in educational, industrial, and environmental professions.
Prerequisite: Graduate standing in department or permission of instructor
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

EST 582: Systems Approach to Human-Machine Systems
General systems theory concepts such as feedback, stability, tipping point, resilience, recursion, hierarchy, and complexity will be discussed, and used to analyze examples of complex systems drawn from nature, business, technology, and education. The course will address the use of feedback, information and communication, structure, and cybernetics to manage complex systems. Students will prepare a study of a complex system and its management incorporating these general concepts. Offered as EST 582 and HPH 662.
3 credits, Letter graded (A, A-, B+, etc.) May be repeated for credit.

EST 584: Air Pollution and Air Quality Management
The effects of air pollution on the environment and public health are explored. Primary pollutants, such as particulates, oxides of sulfur, nitrogen and carbon, hydrocarbons, lead and CFCs are considered, as are secondary pollutants, such as sulfuric acid, PAN, and surface ozone. The effect of atmospheric conditions on the dilution and dispersion of pollutants and the impact of pollution on the global atmosphere are explained. Air pollution disasters and the impacts and ramifications of the Clean Air Act of 1970, its 1990 amendments, and recent international accords are discussed. Case studies of air pollution reduction, management, and regulation in local industry are included. Other contemporary topics include the loss of stratospheric ozone and global warming due to human activities.
Cross-listed as EST 584 or HPH 683.
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

EST 585: Technology in Learning Systems
This course is designed to provide educators with an overview of uses of technology to improve instruction. Standard and innovative, nonconventional modes of learning are considered. Specific areas of study include a systems-based analysis of the design and function of learning environments, individual applications related to the student's area of professional practice, and assessment of educational uses of technology today and tomorrow. Students are exposed to various educational technologies and make a formal presentation applying a technology to an educational system.
3 credits, Letter graded (A, A-, B+, etc.)

EST 586: Environmental and Waste Management in Business and Industry
Environmental and waste management practices in industrial and other institutional settings. Technologies of hazardous waste prevention, treatment, storage, transportation, and disposal are considered. Topics include information systems and software tools for environmental audits, regulatory monitoring and compliance, cost estimation, recycling programs, air, land and water emissions controls and permits. Employee health, safety, and education and quality management and examined. Field trips to several Long Island institutions.
3 credits, Letter graded (A, A-, B+, etc.)

EST 587: Today's Technology: Impact on Education and Economics
This course involves the student in studies of the science, technology, and economics of four selected areas: electronics, transportation, energy, and health sciences. Classroom time is supplemented by visits to appropriate facilities in each area; individuals and groups also plan for the use of the information in their specific areas of responsibility. For example, teachers are responsible for developing teaching strategies for use of the information in their classes and for student career advice and preparation. Those from commerce and industry learn of the powerful influence of technological development on regional economics. This knowledge is helpful in carrying out strategic planning and forecasting within the student's organization.
3 credits, Letter graded (A, A-, B+, etc.)

EST 588: Technical Communication for Management and Engineering
The ability to communicate technical ideas clearly and effectively is critical to success in management and engineering. Hours and money are wasted when confused, distorted writing and speaking obscure the information they are intended to convey. This course will provide managers, engineers, and other technical professionals with practical methods for making their memos, reports, and correspondence clear, comprehensible, and persuasive. Students learn strategies for communicating with both non-specialist and technical audiences, stating their purpose clearly, organizing points most effectively, and expressing ideas concisely and precisely. Special attention is given to technical presentations and to communicating in meetings.
3 credits, Letter graded (A, A-, B+, etc.)

EST 589: Technology-Enhanced Decision Making
This course examines the use of technological devices, especially computers, as aids in decision making. A treatment is given of the cognitive science and artificial intelligence methods used in the structure and operation of some systems that support human decision making. Medical diagnosis systems, business and industrial planning systems, and computer-aided dispatch systems are discussed. In addition, the application of high technology in air traffic control systems is examined.
3 credits, Letter graded (A, A-, B+, etc.)

EST 590: Seminar for MS, TSM Students
A forum for the discussion of research methods, project ideas, and proposal preparation. A final product of this seminar is an approved master's project proposal. Each student also leads a discussion of an important technology-society problem, such as censorship of the Internet, scientific decision making, or environmental regulations. Each student works with a faculty advisor on background research and preparation of the master's project proposal.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

EST 591: Independent Study in Technology and Society
The primary objective of independent study is to provide a student with opportunities to interact with faculty members who can be of assistance in his or her master's project. Students should consult individually with faculty members on workload and credit(s). 1-3 credits. Letter graded (A, A-, B+, etc.) May be repeated for credit.

The ample supply and appropriate use of energy is critical to the well being of human society. Energy plays an enormous role in
environmental degradation, national insecurity, international conflict, and in solutions to these problems. This course aims to introduce the major energy issues to students in engineering, business, and public policy areas. It discusses the energy choices to meet regional and global energy needs. Major renewable and conventional energy sources, energy supply technologies, and end-use efficiency options will be assessed in the context of political, social, economic, and environmental goals.

3 credits, Letter graded (A, A-, B+, etc.)

**EST 593: Risk Assessment and Hazard Management**

A case-study approach to the assessment of risk and the management of natural and technological hazards, with emphasis on those that can harm the environment. The course focuses on technological hazards involving energy, transportation, agriculture, natural resources, chemical technology, nuclear technology, and biotechnology, and on natural hazards such as climactic changes, droughts, floods, and earthquakes. The first part of the course consists of readings on risk assessment and hazard management and discussions of published case studies. During the second part of the course, the students conduct Offered as EST 593 or HPH 686.

3 credits, Letter graded (A, A-, B+, etc.)

**EST 594: Diagnosis of Environmental Disputes**

Diagnosis of disagreements about environmental and waste problems. Tools for evaluating disputes about (a) scientific theories and environmental models, (b) definitions and analytical methodologies for estimating risk, "real" cost, net energy use, and lifecycle environmental impact, (c) regulatory and legal policy, (d) siting of controversial environmental facilities, and (e) fairness and other ethical issues. These diagnostic tools are brought to bear upon case studies of pollution prevention, recycling, nuclear waste disposal, and climate change.

3 credits, Letter graded (A, A-, B+, etc.)

**EST 595: Principles of Environmental Systems Analysis**

This course is intended for students interested in learning systems engineering principles relevant to solving environmental and waste management problems. Concepts include compartmental models, state variables, optimization, and numerical and analytical solutions to differential equations.

Prerequisites: MAT 132 and one year of quantitative science such as physics, chemistry, or geology; or permission of instructor. Offered as EST 595 or HPH 688.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**EST 596: Simulation Models for Environmental and Waste Management**

This course is intended for students interested in developing computer models for technology assessment and for environmental and waste management. Concepts developed in EST 595 Environmental Systems Engineering and Analysis are applied to real-world problems. Techniques in model development are presented in the context of applications in surface and groundwater management, acid rain, and health risks from environmental contamination. Offered as EST 596 or HPH 689.

Prerequisite: EST 595 or permission of instructor

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

**EST 597: Waste Management: Systems and Principles**

Students will learn about the technologies and policy options in waste management, emphasizing recycling, incineration, landfilling, and source reduction options for municipal solid waste on Long Island. Problems concerning paper, glass, plastic, organic materials, and other waste stream components will be explored. Environmental impacts and economics of landfills, materials recovery facilities, and waste-to-energy systems are examined. The institutional and regulatory climate, current and planned practices in the region, and hazardous waste will be discussed.

3 credits, Letter graded (A, A-, B+, etc.)

**EST 598: Teaching Practicum**

Designed to give graduate students teaching experience.

3 credits, S/U grading

**EST 599: Special Projects and Topics**

A technology assessment laboratory for emerging problems and focused research. May be run as a hands-on, group research study of an important educational, environmental or waste problem (perhaps to provide an assessment to a regulatory agency or administrative system).

1-12 credits, Letter graded (A, A-, B+, etc.)

May be repeated for credit.

**EST 600: Technology, Policy, and Innovation: Theory and Practice**

This course provides students with frameworks and models for analysis of issues at the intersection of science, technology and public policy, and business strategy; and helps students develop skills to work on policy issues that require deep understanding of the technical details. Topics include utility/profit maximization theory, its limitations and alternative theories, business and government interactions, technology innovation and management, policy process (agenda setting, problem definition, framing the terms of debate, formulation and analysis of options, evaluation of policy outcomes). Cases drawn from energy and environmental policy, educational technology, STEM education will be used to illustrate stakeholders and their value structures, high levels of uncertainty, multiple levels of complexity, and their influence on policy intervention. This course emphasizes quantitative policy analysis methods, and critical thinking.

Fall, 4 credits, Letter graded (A, A-, B+, etc.)

**EST 610: Data Analysis for Technology, Policy and Innovation**

Common empirical tools used for research in Technology, Policy, and Innovation. Topics include: data collection and sampling techniques, descriptive statistics, probability concepts, estimation, formulating and testing hypotheses, and simple and multiple regression analysis. Discussion of assumptions, strengths and weaknesses of various statistical tools and methodologies. Emphasizes the analysis and presentation of information through visual and numerical means. Use of modern statistical software to analyze real data sets involving socio-technological applications.

Prerequisites: Admission to PhD program or permission of instructor

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**EST 620: Decision Making in Socio-Technological and Global Contexts**

Methodologies and applications to enhance students' abilities to use qualitative and quantitative approaches to examine decision problems within socio-technological and global contexts. Psychological, social and cultural influences on decision making in organizations. Power and limitations of the theories, models and tools of decision analysis. Applications to decision problems in a variety of areas, including energy and environmental systems, educational technology and education in science and engineering, technology management, and science and technology policy.

3 credits, Letter graded (A, A-, B+, etc.)

**EST 650: Directed Study**

Individual studies under the guidance of a faculty member. Subject matter varies
according to the needs of the student. May be repeated for credit.
1-9 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

EST 688: Internship in Research
Participation in private corporations, public agencies, or non-profit institutions. Students will be required to have a faculty coordinator as well as a contact in the outside organization to participate with them in regular consultations on the project, and to submit a final report to both. At most one credit can be accepted toward the degree.
1-3 credits, S/U grading
May be repeated for credit.

EST 690: Seminar in Theory Building
Science is about discovering facts as well as explaining what the facts mean. Theories provide explanations and interpretations of empirical phenomena and building and modifying theories are at the heart of core scientific activities. Good theory is essential to many new fields for several reasons. First, good theory provides guidance for practical action and therefore should be at the foundation of curricula. Second, without good theory in any particular field, researchers must borrow theories from other academic disciplines. While this can be useful, sometimes these theories might not fit our subject matter well. For example social theories based on behavioral assumptions stemming from non-digital communications do not fully address substantive features of social behavior in a digital age.

Research courses commonly emphasize empirical research methods and formal modeling approaches to theory development. There is much less guidance for those who want to build a theory for managerial and behavioral studies. Yet every researcher must do so to develop a good research proposal. This seminar aims to fill that gap by focusing on theory types and evaluation criteria, theory development processes, and theoretical writing.
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

EST 691: Seminar on Innovation, Invention, and Diffusion
Innovation is viewed as central to progress for any individual, organization, nation or global effort. In this seminar we will discuss invention, the two main phases of innovation, exploration and exploitation, the notion of diffusion of innovation and finally innovation policy as well as policy innovation. We will explore a number of types of innovation including radical versus incremental, technological versus administrative, product versus process and more. Using relevant case studies and selected readings from the most influential voices on innovation, including those in academia, corporate America as well as policy-making organizations, we will explore the many different sides of innovation, why it is one of the most critical issues of our time and how seminar participants can contribute to overall innovative efforts.
Offered
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

EST 697: Directed Study
Individual studies under the guidance of a faculty member. Subject matter varies according to the needs of the student.
1-9 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

EST 698: Practicum in Teaching
This course enables graduate students to gain experience in teaching and interacting with students enrolled in Technology, Policy, and Innovation courses. Students enrolled in EST 698 are expected to perform teaching duties required by the course instructor, such as attending lectures, providing office hours, holding review/recitation session, proctoring exams, grading, etc.
Fall, 1-3 credits, S/U grading
May be repeated for credit.

EST 699: Dissertation Research on Campus
Dissertation research under direction of advisor.
1-9 credits, S/U grading
May be repeated for credit.

EST 700: Dissertation Research Off Campus - Domestic
Prerequisite: Must be advanced to candidacy (G%). Major portion of research will take place off-campus, but in the United States and/or U.S. provinces. Please note, Brookhaven National Labs and Cold Spring Harbor Lab are considered on-campus. All international students must enroll in one of the graduate student insurance plans and should be advised by an International Advisor.
1-9 credits, S/U grading
May be repeated 1 times FOR credit.

FLA 505: Methods: Foreign Language
An in-depth exploration of the methods and materials for the teaching of foreign languages, literatures, and cultures. Special attention is given to the theories of first and second language acquisition and to the techniques for teaching listening, speaking and writing skills. This course gives students the opportunity to conduct observations/field experiences in grade level (7-12) settings.
3 credits, Letter graded (A, A-, B+, etc.)

FLA 506: Curriculum Development
Drawing on theories of first and second language acquisition and research into the best practices of language teaching, this course trains future language teachers in the development of well-articulated language programs. Students have the opportunity to enjoy clinical experiences in school settings. Special attention is given to the development of a professional teaching portfolio including lesson plans, assessment instruments, and technology-based activities.
3 credits, Letter graded (A, A-, B+, etc.)

FLA 507: Critical Pedagogy
This graduate seminar is intended to introduce the ideas, theories, and practices that together constitute the field known as critical pedagogy. Critical pedagogy assembles numerous forms of academic approaches to teaching and curriculum that are informed by critical social theory. As the educational arm of critical social theory, critical pedagogy engages educators in understanding the relationships
among knowledge, ideology, and power. We will read works from several critical pedagogy theorists (Freire, Shor, Giroux, McLaren, Apple, hooks) to explore some of the key themes within critical pedagogy (relationship of education to power; issues of difference and pluralism; transformative education; the social construction of knowledge; dialogic relations in the classroom; teaching for social justice). Learning through collaborative inquiry, we will translate the theories in these readings into practice and will test ideas and concepts unique to teaching and learning "critical (second/foreign) language" in a school setting.

3 credits, Letter graded (A, A-, B+, etc.)

FLA 549: Field Experience
Observation, inquiry, and practice in foreign language education at the secondary level including 50 hours of documented visitations and observations at approved sites. Field experience writing logs are the basis of group discussion. S/U grading.

1 credit, S/U grading

FLA 550: Field Experience
Observation, inquiry, and practice in foreign language education at the secondary level including 50 hours of documented visitations and observations at approved sites. Field experience writing logs are the basis of group discussion. S/U grading.

1 credit, S/U grading

FLA 551: Supervised Student Teaching
7-9

FLA 552: Supervised Student Teaching
10-12

FLA 554: Student Teaching Seminar

FLA 570: Introduction to Media for Language Teaching
(Course open to non-DA graduate students.)

Gives students an introduction to all of the technology used in teaching languages: audio, video, computer, and internet. Emphasis is on hands-on use and practical applications. Offered as DLL 570 and FLA 570

Prerequisites: DLL 570 and DLL 571

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

FLA 571: Foreign Language Technology and Education
Course open to non-D.A. graduate students. Assumes knowledge of material taught in DLL/FLA 570. Addresses more globally and more theoretically the intersection between technology and languages. Issues of cognitive learning theory and educational psychology addressed. Offered as DLL 571 and FLA 571

Prerequisites: FLA 505 and FLA 506

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

FLA 581: Foreign Language Teaching Independent Project
Students enrolled in Track B of the MA program in European Languages (French, German, Italian or Russian) or the MA in Hispanic Languages complete an independent project in the area of Foreign Language Teaching. The content and scope of this project must be approved by the Director of Foreign Language Pedagogy. Possible projects include a fully developed professional teaching portfolio (in print and/or electronic version), an action research study or a classroom-based research study culminating in a publishable paper. Fall or spring

3 credits, Letter graded (A, A-, B+, etc.)

FRN

FRN 500: Techniques of Reading for Graduate Research
Through intensive study of language structures and idiomatic usage, with extensive practice in written translation of literary and scholarly texts, candidates for advanced degrees are able to attain the proficiency level of the graduate French reading requirement. Several departments grant exemption from further examination for successful completion of this course. (Not for graduate students in French.)

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

FRN 501: Contemporary Culture and Civilization
Analysis of contemporary French civilization through the study of the development of its historical, cultural, political, and social characteristics. Designed for potential French teachers at the college level as well as in secondary schools, this course will emphasize and trace the evolution of the character and institutions of contemporary France and French-speaking countries.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

FRN 502: French Civilization in Its Historical Perspective
In this course, students study historical French civilization concentrating on those features which have created France today and its current culture. Political and social developments are considered as well as major trends in the arts.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

FRN 507: Stylistics (Syntax and Composition)
Stylistic theory and analysis. Problems of syntax and structure. Translations from English to French and French to English of texts from different modes and levels of discourse. Designed to develop and refine written expression in French and analysis of literary texts.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

FRN 508: Explication de Texte or Introduction to Literary Criticism
This course is designed to develop sensitivity to literary texts. Emphasis will be placed upon weekly explication de texte, beginning with Renaissance literature and proceeding to the modern period, in which analysis will be made of those effects that, taken together, constitute a given author's stylistic pattern.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

FRN 509: Bibliography and Research Methods
Students learn about the effective use of the library and its resources (reference sources and materials, on-line catalog, use of CD-Roms and database searching). They are introduced to specialized bibliographies and other tools essential to their research. A bibliography on a topic related to a special field of interest is required at the end of the course.

Spring, 1 credit, Letter graded (A, A-, B+, etc.)

FRN 510: French Phonetics and Diction
The pronunciation of French with emphasis on intonation and articulation. Theory and practice of linguistic and phonetic factors of the sound system. Coursework includes phonetic transcriptions, recordings, and diagnostic texts. Language laboratory required.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

FRN 511: Business French
A course designed to provide efficiency in spoken and written business French with an emphasis on bilingual translation. This course will also familiarize students with French business domestically, in the context of the European Union, and in contrast to America. Issues of current importance as well as
Institutions will be studied. Students will also carry on individual projects such as comparing marketing strategies of an American company in the US and in France or profiling a major French company.

3 credits, Letter graded (A, A-, B+, etc.)

FRN 513: Romance Linguistics

This course examines the linguistic evolution of the Romance languages from the classical period through modern times. The synchronic grammars of Italian, French, and Spanish are examined.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

FRN 531: Studies in the Classical Theatre

Analysis of classical dramaturgy and some of the major themes of 17th-century tragedy and comedy. Close reading of selected plays by Corneille, Racine, and Molière.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

FRN 551: Romance Linguistics

This course examines the linguistic evolution of the Romance languages from the classical period through modern times. The synchronic grammars of Italian, French, and Spanish are examined.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

FRN 552: Penseurs, Moralistes, et Mondains

Intensive reading and analysis of selected texts by authors such as Descartes, Pascal, La Fontaine, La Rochefoucauld, La Bruyère, Mme de Sevigne, and Mme de Lafayette. Changing topic.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

May be repeated for credit.

FRN 541: Studies in 18th-Century French Literature

A study of the major texts in the 18th-century struggle between absolutism and the emerging forces of Enlightenment, as well as readings in preromanticism. In addition to the works of Montesquieu, Voltaire, Diderot, Rousseau, Beaumarchais, and Laclos, other types of writing, such as Bayle's dictionary and the Encyclopédie, are examined.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

May be repeated for credit.

FRN 542: Seminar in 18th-Century French Literature

Special topics in 18th-century literature, such as "Representing the French Revolution," "Dialogiques in Diderot and Rousseau," "The Concept of the Individual," and "Femme, Cloture, Ecriture," are studied through the works of major writers of the period as well as those of lesser-known figures such as Mme. de Graffigny, Mme. Riccoboni, Mme. d'Epinay, Olympe de Gouges, and other revolutionaries such as Mirabeau, Saint-Just, Condorcet, and Robespierre.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

FRN 552: Studies in 19th-Century French Literature

Close reading of selected works by major novelists of the period, such as Balzac, Stendhal, Flaubert, Zola; themes such as Paris versus the provinces, money and decadence; or 19th-century poetry by Baudelaire, Mallarmé, Verlaine, and Rimbaud, with an introduction to some important critical approaches to these texts.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

May be repeated for credit.

FRN 561: Seminar in 20th-Century French Literature

Broad samplings of texts from throughout the century are critically investigated while the period's literary history is reviewed. Sample authors: Proust, Gide, Sartre, Camus, Sarrate, Duras, Giraudoux, Claudel, Beckett, Butler, Queneau, Valery, Ponge, Char, Cesaire, Bonnefoy.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

May be repeated for credit.

FRN 562: Studies in Contemporary Literature

Focused examinations of French literary texts since 1968 and recent francophone writings. How has the novel survived the ceaseless testing of its limits? What is the status of contemporary poetry? Sample authors: Le Clezio, Ben Jelloun, Mallet-Joris, Alexis, Duras, Deguy, Roche, Bonnefoy, Tournier.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

May be repeated for credit.

FRN 564: Seminar in Francophone Literature

Close examination of the literatures written in French of the Francophone world outside of France, with special emphasis on the literatures written in French of the Caribbean and Africa. This course will pose and explore questions such as: What is Francophone literature? What is the function of writing in French in a Francophone context? Attention is paid to the issue of critical approaches to these texts. Topics vary from year to year and may include texts from any of the French-speaking territories outside of France. Sample authors: Mariama Ba, Chauvet, Cesaire, Conde, Glissant, Roumain, Schwartz-Bart, Senghor, Wéreuwé-Liking.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

May be repeated for credit.

FRN 570: Special Topics in French Literature

Courses given in the past have covered a single author, French women writers, French poetry of 1664-1674 and other topics.

3 credits, Letter graded (A, A-, B+, etc.)

FRN 571: Free Seminars

Courses given in the past have covered a single author, genre, and other topics.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

May be repeated for credit.

FRN 581: Independent Individual Studies

May be repeated for credit as the topic changes.

Prerequisite: must be enrolled in a graduate program.

Fall, 1-6 credits, Letter graded (A, A-, B+, etc.)

May be repeated for credit.

FRN 582: Language Proficiency

Second language acquisition for M.A., M.A.T. and Ph.D. candidates from other Programs.

Fall, 1-6 credits, Letter graded (A, A-, B+, etc.)

May be repeated for credit.

FRN 595: Practicum in Teaching

Fall and Spring, 1-3 credits, S/U grading

May be repeated for credit.

FRN 599: Thesis Research

Fall and Spring

1-6 credits, S/U grading

May be repeated for credit.

FRN 800: Summer Research

May be repeated for credit.

GEO

Geosciences

GEO 500: Geosciences Research Seminar

Meetings in which first-year graduate students and undergraduates with senior standing learn about the research activities of the Geosciences faculty.
Fall, S/U grading

GEO 502: GIS for Geologists
A practical introduction to geographic information system software. Participants learn to use direct measurement and mathematical techniques to compute the location of features and gain practical experience in rendering imagery and tabular geographic data as layers on maps. The course consists of two three-hour sessions per week for the first five weeks of semester, which include fieldwork, lectures, demonstrations and software-based analysis of data.
This course meets with GEO 588 (Geological Field Methods for Earth Science Teachers) for the first five weeks of the semester. Students may not take GEO 502 and GEO 588 for credit.
Fall, 1 credit, Letter graded (A, A-, B+, etc.)

GEO 503: Mineral Equilibria
Covers the basics of the application of the principles of chemical thermodynamics to the resolution of geochemical and petrological problems. Begins with the first law and continues through phase transitions, properties of fluids, definitions of fugacity and activity of major and trace elements in fluids and molten solutions; configurational entropies; models quantifying nonideal mixing in solid solutions. Additional topics include interpretation of calorimetric studies and/or solubilities of minerals in aqueous solutions.
Prerequisites: Physical chemistry and thermodynamics, or permission of instructor
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

GEO 505: Experimental Petrology Laboratory
The course is designed to give the student experience in some or all of the following techniques of experimental petrology: evacuated silica-glass tube experiments, one-atmosphere quenching experiments (with and without controlled atmospheres), 1- to 5- kbar hydrothermal systems (using oxygen buffers where necessary), gas-media experiments up to 7 kbar, and solid-media, piston-cylinder experiments.
Requirements: Completion of a project involving several of the above techniques; written report
Spring, 1 credit, Letter graded (A, A-, B+, etc.)

GEO 506: Theoretical Petrology
Theory of phase diagrams, Schreinemaker's rules, heterogeneous equilibria, experimental systems of petrologic interest, and properties of solutions.
Prerequisites: Metamorphic and igneous petrology and physical chemistry or thermodynamics; or permission of instructor
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

GEO 507: Petrogenesis
Discussion of the origin and evolutionary history of selected types of igneous and metamorphic rocks by integrating the principles of heterogeneous phase equilibria, trace-element and isotopic geochemistry, crystal chemistry, and geologic occurrence.
Fall, 4 credits, Letter graded (A, A-, B+, etc.)

GEO 508: The Rock-Forming Minerals
Study of the crystal chemistry, intracrystalline cation distribution (homogeneous equilibria) stability, and paragenesis of the rock-forming minerals. Special emphasis is placed on amphiboles, feldspars, micas, and pyroxenes.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

GEO 510: Dimensions of Global Change
This course is designed to be an intense study in global climate change science. The emphasis will be on modern climate change however, by studying the contributions of paleoclimatology we can gain insight into how the climate system operates. To understand modern climate change and predictions, it is necessary to develop an understanding of natural climate forcing, natural variability and feedbacks in the climate systems. Adding to natural variation are the impacts of anthropogenic forcing. The course will examine the measured and predicted consequences of these anthropogenic forcing.
Offered Fall and Summer, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

GEO 511: Computer Programming for the Geosciences
An introduction to object-oriented programming in Java for geoscience students. Participants are required to develop interactive programs to serve as educational or research tools pertaining to topics within the geosciences. These programs, or applets, include a graphical user interface that enables users to control parameters and observe results. The applets are posted on the World Wide Web.
Prerequisite: Geosciences graduate standing
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

GEO 512: Structure and Properties of Materials
An introductory course that will explore materials from the viewpoint of their structure and chemistry and how these affect applications. Different states of matter (crystals, quasicrystals, glasses, liquids) will be discussed and their similarities and differences, focusing on the crystalline state. Nanomaterials and their peculiarities in terms of structure and properties will also be considered. Particular attention will be paid to (1) Materials for energy and environment applications, (2) materials for technological applications, and (3) Earth and planet-forming materials.
3 credits, Letter graded (A, A-, B+, etc.)

GEO 513: GIS Fundamentals I
This course provides the basic concepts underlying modern geographic information science and technology. Emphasis is placed on the principles of GIS for collecting, storing, characterizing, and maintaining data and computer-based techniques for processing and analyzing spatial data. The course includes three hours of lecture, in class exercises and homework projects each week. This is a computer based class with the majority of students work involving GIS computer software. Prerequisite: working knowledge of spreadsheet software.
Offered Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

GEO 514: Introduction to Physical Hydrogeology
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

GEO 515: Geohydrology
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

GEO 517: Crystal Chemistry
The structure/property/composition relationships in solids. An introduction to the common structure types and how they illustrate principles useful in understanding
more complex solid-state materials. Applications of modern scattering techniques to the study of solids, particularly Earth materials, are also included.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**GEO 518: Carbonate Sediments**

An intensive study of the formation, deposition, lithification, and diagenesis of carbonate sediments. Lectures and seminars emphasize principles of carbonate deposition, facies relationships, and chemistry. Laboratories emphasize binocular and petrographic analysis of recent and ancient carbonates.

Spring, 4 credits, Letter graded (A, A-, B+, etc.)

**GEO 519: Geochemistry of Natural Waters**

A comprehensive quantitative treatment of the processes controlling the chemistry of polluted and unpolluted surface and groundwaters. Topics covered include thermodynamics and kinetics of water-rock interaction; mineral solubility; chemical speciation; redox reactions; adsorption; carbonate chemistry; and speciation, mobility, and toxicity of metal ions. Based on a knowledge of these processes, the chemical composition of a wide variety of surface and groundwaters is interpreted. Water-quality criteria and their application are also discussed.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

**GEO 520: Glacial Geology**

History of glaciation on earth, formation and dynamics of glaciers and ice sheets; processes of glacial erosion and deposition; and the nature of glacial sediments and landforms particularly relating to the development of Long Island.

Prerequisite: Physical Geology

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

**GEO 521: Isotope and Trace Element Geology**

Application of radiogenic isotopes and trace elements to the petrogenesis of igneous, metamorphic, and sedimentary systems including water-rock interaction in diagenetic and hydrothermal systems. Evaluation of radiogenic techniques for determining the ages of rocks and minerals.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

**GEO 522: Planetary Sciences**

The chemical, physical, and petrologic properties of meteorites are reviewed. These data and data for the moon and the terrestrial planets are used to form a picture of the origin, chemical evolution, and accretion of planetary material.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**GEO 524: Organic Contaminant Hydrology**

There are a host of chemical, biological, and physical processes that affect the transport and fate of organic chemicals in natural waters. This course concerns understanding these processes and the structure-activity relationships available for predicting their rates. The major focus of this class is on contaminant hydrology of soil and aquifer environments, and includes the principles behind remediation and containment technologies. This course is offered as both MAR 524 and GEO 524.

Prerequisite: GEO 526 or MAR 503 or permission of instructor

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

**GEO 526: Low-Temperature Geochemistry**

Fundamental principles of chemical thermodynamics and kinetics, including isotope effects, as they pertain to geochemical processes occurring in surface and near-surface environments. Consideration is also given to mass transfer process and reaction pathways.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**GEO 528: Carbonate Geochemistry**

Examination of the mineralogical and chemical characteristics of the rock-forming carbonates with emphasis on stability in the geological environments. Includes study of phase relations; trace and minor element chemistries; and mechanisms of growth, dissolution, and replacement. Use of current research techniques as applied to carbonate minerals.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**GEO 530: The Geology of Mars**

Overview of Mars as a planetary system. Evolution of the planet and its atmosphere through time. Detailed discussion of processes that have shaped the martian surface, including erosion, sedimentation, volcanism, impact cratering, physical and chemical weathering. Comparison of geologic processes on Mars and Earth. Discussion of past and future spacecraft missions to Mars. Three hours of lecture per week.

3 credits, Letter graded (A, A-, B+, etc.)

May be repeated for credit.

**GEO 531: Crystalline Solids**

Principles of symmetry, single-crystal, and powder X-ray diffraction techniques and elements of crystal structure determination are considered. Use of crystallographic data in the study of mineral systems. Laboratory in diffraction techniques includes extensive use of digital computers.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**GEO 532: Solid-State Geochemistry**

The application of crystallographic techniques to problems in mineral chemistry. Concepts of the crystalline state, order-disorder, atom radii, chemical bonding, atom coordination, solid solutions, and physical properties of minerals. Emphasis on silicate and sulfide crystal structures.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**GEO 533: Geochemistry of the Terrestrial Planets**

A brief overview of basic principles of geochemistry, including origin of the elements, geochemical and cosmochemical classification of the elements, and a geochemical perspective of the periodic table. This is followed by an examination of the compositions and chemical interactions among the major geochemical reservoirs of the terrestrial planets, including their cores, mantles, crusts, and where relevant, sedimentary shells.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**GEO 535: Regional Structure and Tectonics**

Formation and development of continental crust in Phanerozoic mountain belts. The structure and origin of ocean crust, magmatic arcs, and continental margin sequences are studied using geophysical, geochemical, and geologic data from ancient and modern examples.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**GEO 540: Solid Earth Geophysics**

An overview of solid earth geophysics. Topics include earthquake and exploratory seismology, gravity, magnetism, geochronology, and heat flow. There is an emphasis on how all of these techniques shed light on the nature of the Earth's interior and dynamics.

Prerequisite: Physical geology, undergraduate physics and calculus

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**GEO 542: Inverse Theory**

Introduction to the basic concepts of inverse theory and its application to the study of the internal structure of the Earth and related problems.
GEO 543: Stratigraphy
The history and practice of defining units layered rocks and interpreting their spatial relationships. Topics include the basis for the geologic time scale, lithostratigraphic versus chronostratigraphic units, biostratigraphy, magnetostratigraphy, facies patterns and Walther's law, subsurface stratigraphy, and the application of stratigraphy to geological problems. One three-hour laboratory per week. Laboratory work emphasizes practical techniques in stratigraphy.
Prerequisite: GEO 546 or undergraduate mineralogy and petrology
Fall, 4 credits, Letter graded (A, A-, B+, etc.)

GEO 546: Mineralogy and Petrology
An introduction to mineralogy and petrology, including crystallography, crystal chemistry, mineral identification, and the processes that govern the formation of igneous and metamorphic rocks. Two three-hour laboratories per week.
Prerequisite: Undergraduate physical geology and one year of undergraduate chemistry
Spring, 4 credits, Letter graded (A, A-, B+, etc.)

GEO 549: Structural Geology
Principles of structural geology, including the recognition and the mechanics crustal structural features. Topics include folding and faulting, stress and strain, and the nature of brittle and ductile lineations and foliations in the crust. One three-hour laboratory per week.
Prerequisite: Undergraduate physical geology
Spring, 4 credits, Letter graded (A, A-, B+, etc.)

GEO 550: Global Tectonics
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

GEO 551: Physics of the Earth I
Study of the internal structure and properties of the Earth as revealed by field and laboratory investigations. Topics include the rotation and figure of the Earth, gravity anomalies, solid-earth tides, geomagnetism and paleomagnetism, electromagnetic induction, and heat flow and the Earth's present and past thermal states. May be taken independently of GEO 552.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

GEO 552: Physics of the Earth II
Study of the Earth's structure and properties based on evidence from seismology and high-pressure geophysics. Topics include fundamental principles of elastic wave theory, body and surface wave propagation in layered media, earthquake source mechanisms, free oscillations of the Earth, and rheological properties of the Earth's interior. May be taken independently of GEO 551.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

GEO 556: Solid-State Geophysics
Application of lattice dynamics and equations of state of solids to studies in high-pressure, high-temperature geophysics. Reviews experimental data from physical acoustics, static and shock wave compression, and theoretical results from finite strain and atomistic models.
Prerequisites: GEO 551 and 552, or permission of instructor
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

GEO 562: Early Diagenesis of Marine Sediments
The course treats qualitative and quantitative aspects of the early diagenesis of sediments. Topics include diffusion and adsorption of dissolved species; organic matter decomposition and storage; and diagenesis of clay materials, sulfur compounds, and calcium carbonates. The effects of bioturbation on sediment diagenesis are also discussed. This course is offered as both MAR 562 and GEO 562.
Prerequisite: Permission of instructor
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

GEO 564: Numerical Hydrology
Numerical solution methods for the equations of incompressible flow in porous media with special emphasis on groundwater flow. Finite difference and finite element methods for steady-state and transient flows-boundary conditions, range of validity and stability of the numerical schemes, and numerical artifacts. The approach is hands on, with example problems being computed. This course is offered as both GEO 564 and AMS 562.
Prerequisite: AMS 526 or permission of instructor
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

GEO 567: Sedimentary Rocks and Crustal Evolution
An examination of major and trace elements and isotopic composition of terrigenous sedimentary rocks within a framework of tracing the composition and evolution of the continental crust. Emphasis is placed on interpreting sedimentary compositions in terms of provenance and sedimentary history (e.g., weathering, diagenesis, recycling). Relationships between sediment composition and tectonic setting is also examined.
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

GEO 570: Earthquake Mechanics
A survey of fundamental mechanics aspects of earthquake rupture: reviews concepts of fracture mechanics, elastodynamics, and experimental rock mechanics. Topics include state of stress in the lithosphere, theoretical models of earthquake instability, energetics of faulting, representation of dynamic elastic field generated by earthquakes, and relation of seismic signals to the kinematics and dynamics of seismic source.
Prerequisite: GEO 552 or permission of instructor
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

GEO 571: Mechanics of Geologic Materials
Elastic, thermal, and anelastic properties of geological materials. The course emphasizes a thermodynamic characterization of these properties including irreversible thermodynamics and nonhydrostatic thermodynamics. Specific applications to the Earth's environment are discussed.
Prerequisites: GEO 551, 552, or permission of instructor
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

GEO 572: Advanced Seismology
Course is intended to expose the student to topics that are at the forefront of current seismological research. Examples include wave propagation in heterogeneous media, earthquake source studies, tsunami generation, and seismic network data analysis.
Prerequisite: GEO 552
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

GEO 573: Physics of Rocks
Fundamentals of the physical properties of rock in relation to seismology, hydrogeology, geophysical prospecting and geotechnical engineering. Topics include: composition, pore structure and fabric of rocks; elasticity, anelasticity and plasticity; seismic velocity and
anisotropy; poroelasticity; electrical, magnetic and hydraulic transpot properties.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

GEO 581: Coastal Engineering Geology
Concepts of the mechanics of earth materials and the physics of surficial processes with applications to the coastal environment and engineering. This course is also offered as mar 581.
Prerequisites: Enrollment in MESP or OEN program or instructor
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

GEO 585: Directed Studies
Special studies directed by various faculty members.
Fall, 1-3 credits, Letter graded (A, A-, B+, etc.)

GEO 588: Geological Field Methods for Earth Science Teachers
Geologic mapping techniques, geochemical analytical approach, and hydrological methodologies applied in the field to examples on Long Island. These approaches are designed for developing research projects for secondary students in earth science.
Prerequisite: Permission of instructor
Summer, 3 credits, Letter graded (A, A-, B+, etc.)

GEO 589: Research for Earth Science Teachers
This course is intended to provide earth science teachers or students in the M.A.T. in Earth Science program an opportunity to obtain research experience. A written report is required.
Prerequisite: Permission of instructor
Summer, 1-3 credits, Letter graded (A, A-, B+, etc.)

GEO 590: Research Project
Independent research
Fall, 1-12 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

GEO 599: Research
Independent research for those students established in a research group.
1-12 credits, S/U grading
May be repeated for credit.

GEO 600: Practicum in Teaching
Fall and Spring, 0-3 credits, S/U grading
May be repeated for credit.

GEO 601: Topics in Petrology
Fall and Spring, 1-3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

GEO 602: Topics in Mineralogy and Crystallography
Fall and Spring, 1-3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

GEO 603: Topics in Petrology
Fall and Spring, 1-3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

GEO 604: Topics in Planetary Science
May be repeated for credit.

GEO 605: Topics in Sedimentary Geology-Paleontology
Fall and Spring, 1-3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

GEO 607: Topics in Geophysics
Fall and Spring, 1-3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

GEO 609: Topics in Mineralogy and Crystallography
Fall and Spring, 1-3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

GEO 609: Topics in Geology-Paleontology
Select topics in earth science.
Fall and Spring, 1-3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

GEO 610: Geoscience Colloquium
A weekly series of research seminars presented by visiting scientists as well as by the faculty. Required every semester of all geoscience graduate students.
Fall and Spring, S/U grading
May be repeated for credit.

GEO 611: Geoscience Seminar
Presentation of preliminary research results and current research problems by students and faculty. Required every semester of all geoscience graduate students.
Fall and Spring, S/U grading
May be repeated for credit.

GEO 612: Geoscience Special Seminar
A weekly series of specialized seminars in which graduate students and faculty discuss specific topics within the subgroups of geology. Research is reviewed, and theses are discussed.
Fall and Spring, S/U grading
May be repeated for credit.

GEO 696: Geoscience Colloquium
A weekly series of research seminars presented by visiting scientists as well as by the faculty. Required every semester of all geoscience graduate students.
Fall and Spring, S/U grading
May be repeated for credit.

GEO 700: Dissertation Research off Campus - Domestic
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place off-campus, but in the United States and/or U.S. provinces. Please note, Brookhaven National Labs and the Cold Spring Harbor Lab are considered on-campus. All international students must enroll in one of the graduate student insurance plans and should be advised by an International Advisor.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

GEO 701: Dissertation Research off Campus - International
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place outside of the United States and/or U.S. provinces. Domestic students have the option of the health plan and may also enroll in MEDEX. International students who are in their home country are not covered by mandatory health plan and must contact the Insurance Office for the insurance charge to be removed. International students who are not in their home country are charged for the mandatory health insurance. If they are to be covered by another insurance plan they must file a waiver be second week of classes. The charge will only be removed if other plan is deemed comparable.
All international students must receive clearance from an International Advisor.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

GEO 800: SUMMER RESEARCH
May be repeated for credit.

GER

Germanic Languages and Literature

GER 500: Intensive Reading German
Intensive introductory German for graduate students in other programs. Practice in reading and translation; German prose; use of dictionaries and reference materials; as much attention as possible to special problems of various disciplines.
Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)

GER 506: Advanced Stylistics
Advanced stylistics and discourse analysis. Designed to deepen the advanced student's
knowledge of the syntax, structure, and stylistic versatility of the German language. Spring, 3 credits, Letter graded (A, A-, B+, etc.)

**GER 539: Contrastive Structures: German-English**
Contrastive study of the phonological, morphological, syntactic, and semantic structures of German and English. Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**GER 541: Literature of the Goethe Period**
A study of the literature and culture of Germany during Goethe’s lifetime, 1749-1832. Spring, 3 credits, Letter graded (A, A-, B+, etc.)

**GER 544: German Fiction**
Major authors of modern German fiction are read and discussed. Texts may include works from 19th and 20th century authors. The course may also focus on works by a single author. 3 credits, Letter graded (A, A-, B+, etc.)

**GER 545: 20th-Century German Poetry**
Intensive reading and discussion of 20th-century German poetry, including works by Rilke, Trakl, Brecht, Benn, and Kirsch. The course may also focus on a single poet or movement in the 20th century. Spring, 3 credits, Letter graded (A, A-, B+, etc.)

**GER 546: 20th-Century German Drama**
A survey of representative plays of the 20th century, including works by Hauptmann, Hofmannsthal, Kaiser, Sternheim, Toller, Fleisser, Horvath, and Brecht. The course may also focus on the works of a single dramatist. Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**GER 547: Special Author Studies Tutorial**
Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.) May be repeated for credit.

**GER 548: Special Period Studies Tutorial**
Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.) May be repeated for credit.

**GER 557: History of the German Language**
The development of the German language from Indo-European to modern High German: a representative selection of texts from different periods will be examined. Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**GER 558: Middle High German**
An introduction to Middle High German grammar with representative reading from the Middle High German classics. Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**GER 562: Historical Germanic Linguistics**
An introduction to the principles and methods of historical linguistics as applied to problems in the Germanic branch of Indo-European (early tribal movements, attempts at dialect grouping, dialect geography, etc.). Part of the course will be devoted to readings in Gothic, Old Norse, and Old High German with a comparison of the morphologies of these languages. Spring, 3 credits, Letter graded (A, A-, B+, etc.)

**GER 581: Independent Study**
May be repeated for credit.

**GER 582: Language Proficiency**
Second language acquisition for M.A., M.A.T. and Ph.D. candidates from other Programs. Fall, 1-6 credits, Letter graded (A, A-, B+, etc.) May be repeated for credit.

**GER 595: Practicum in Teaching**
Fall and Spring, 1-3 credits, S/U grading May be repeated for credit.

**GER 599: Thesis Research**
GER 599 Thesis Research. One-six credits. S/U grading. May be repeated for credit. 1-6 credits, May be repeated 6 times FOR credit.

**GIS**

**GIS 513: GIS Fundamentals I**
This course provides the basic concepts underlying modern geographic information science and technology. Emphasis is placed on the principles of GIS for collecting, storing, characterizing, and maintaining data and computer-based techniques for processing and analyzing spatial data. The course includes three hours of lecture, in class exercises and homework projects each week. This is a computer based class with the majority of students work involving GIS computer software. Prerequisite: working knowledge of spreadsheet software. Offered Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.) May be repeated for credit.

**HBA**

**Anatomical Sciences**

**HBA 521: Gross Anatomy of Head, Neck, and Trunk**
Tutorial laboratories with emphasis on dissections of the human head, neck, and trunk. 8 credits, Letter graded (A, A-, B+, etc.)

**HBA 531: The Body**
A lecture and laboratory with emphasis on dissection of the entire human body. Topics include functional and topographic anatomy, embryology, clinical correlations, and an introduction to radiology. 8 credits, S/F graded

**HBA 540: Human Anatomy for Physical Therapists**
Lecture followed by laboratory dissection of the human body. Regional approach to the gross anatomy of the human body for physical therapy graduate students (DPT). The course is presented in three modules. Module one covers the back, thorax, abdomen, pelvis and perineum. Lectures will cover the regional anatomy of the above as well as conceptual information about the peripheral nervous system, the heart and respiratory system. Module two covers the brain, head and neck. Lecture will address the anatomy and organization of the central nervous system, the cranial nerves, introduction to the anatomy of the special senses and mastication.
Module three will offer an expanded view of the functional anatomy of the limbs and musculoskeletal system. Lectures will address the functional anatomy of the hand and the foot as well as posture and locomotion. In module three clinical faculty will address the latest developments in radiology and skeletal imaging, and the clinical anatomy of the back, shoulder, elbow, hand, hip, knee, and foot.

HBA 541: Evolutionary Anatomy
A lecture and laboratory with emphasis on dissection of the entire human body. Includes functional and comparative anatomy with special emphasis on the musculoskeletal morphology of humans and higher primates. This course is offered as both DPA 541 and HBA 541.

Prerequisite: permission of instructor
Fall, 8 credits, Letter graded (A, A-, B+, etc.)

HBA 542: Advanced Human Anatomy for Physical Therapists
Regional approach to the gross anatomy of the lower limb for physical therapy graduate students (DPT). The course is presented in conjunction with HYA519, Kinesiology for Physical Therapists. This module will offer an expanded view of the functional anatomy and arthrology of the hip, thigh, leg and foot. Labs will be three hours, one day per week. Enrollment will be limited to DPT students.

S/U grading

HBA 550: Vertebrate Evolution
Survey of the fossil record of vertebrate evolution. The course emphasizes the origin, phylogeny, comparative and functional morphology, biogeography, and paleontology of vertebrate animals. Laboratory included. The lectures and laboratories will utilize an extensive collection of comparative anatomical material, fossil casts, and slides.

Prerequisite: Previous course in human or vertebrate anatomy and permission of instructor.
Spring, 4 credits, Letter graded (A, A-, B+, etc.)

HBA 551: Phylogenetic Systematics, Biogeography and Comparative Methods
This course will provide students with a familiarity in the practical application of modern phylogenetic methods and the use of phylogenies in framing evolutionary hypotheses. The course will have both a lecture and laboratory component with lectures including in-class discussions of assigned readings. Lab exercises will be devoted to hands-on experience with available software for phylogenetic and comparative methods. Comparative methods examined will include a focus on historical biogeography as well as ancestral state reconstruction, rates of evolution and diversification, and analysis of adaptation and key innovations.

4 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

HBA 560: Advanced Regional Anatomy
Advanced human gross anatomy for graduate students or advanced undergraduates in biology, anthropology and other life sciences.

Prerequisite: Permission of instructor.
Fall, 3-8 credits, Letter graded (A, A-, B+, etc.)

HBA 561: Human Gross Anatomy
A lecture and laboratory course that includes dissections of the entire human body. The course is organized in three modules: (1) thorax and abdomen, (2) head and neck, including neuronatomy, and (3) limbs. It covers regional and conceptual information on the gross anatomy of all organ systems in the human body. Prerequisites permission of instructor for students that are not enrolled in Stony Brook's Occupational Therapy, Physician Assistant or Respiratory Therapy programs.

Summer, 5 credits, Letter graded (A, A-, B+, etc.)

HBA 563: Aspects of Animal Mechanics
An introduction to biomechanics. Covers freebody mechanics and kinetics as applied to vertebrate locomotion. Considers the structure and physiology of muscle as it relates to adaptations of the musculoskeletal system. This course is offered as both HBA 563 and DPA 563.

Prerequisites: Introductory physics and biology or permission of instructor.
Spring, 2 credits, Letter graded (A, A-, B+, etc.)

HBA 564: Primate Evolution
The taxonomic relationships and evolutionary history of primates as documented by their fossil record and structural and chemical evidence. Emphasis on primates prior to the origin of the human lineage. This course is offered as ANT 564, DPA 564 and HBA 564.

Spring, 4 credits, Letter graded (A, A-, B+, etc.)

HBA 565: Human Evolution
A survey of the fossil record of hominid evolution through the Pliocene and Pleistocene with emphasis on the morphological structure and function of locomotor, masticatory, and neutral systems. Includes utilization of comparative anatomical material and extensive cast and slide collections. This course is offered as ANT 565, DPA 565 and HBA 565.

Fall, 4 credits, Letter graded (A, A-, B+, etc.)

HBA 566: Studies in Functional Morphology
Introduction to the theory and methods of functional morphology. Various methods of analysis and the application of experimental techniques such as electromyography or bone strain analysis are discussed as they pertain to the understanding of the interaction between form and function. Special emphasis is placed on the analysis of human and nonhuman primate morphology, and the application of this analysis to interpretation of the fossil evidence for human and nonhuman primate evolution. This course is offered as both HBA 566 and DPA 566.

Prerequisite: Permission of instructor.
Spring, 2 credits, Letter graded (A, A-, B+, etc.)

HBA 582: Comparative Anatomy of Primates
The comparative anatomy of living primates. Laboratory dissection with emphasis on relating structural diversity to behavior and biomechanics. This course is offered as both HBA 582 and DPA 582.

Prerequisites: HBA 364 and previous course in human or vertebrate anatomy and permission of instructor.
Spring, 4 credits, Letter graded (A, A-, B+, etc.)

HBA 590: Projects in Anatomical Sciences
Individual laboratory projects closely supervised by faculty members to be carried out in staff research laboratories.

Prerequisite: Permission of instructor.
Fall and Spring, 1-6 credits, S/U grading
May be repeated 3 times FOR credit.

HBA 690: Graduate Seminar
Seminars by graduate students on current literature in the areas of the anatomical sciences.

Prerequisite: Permission of instructor.
Fall and Spring, 1 credit, S/U grading
May be repeated 3 times FOR credit.

HBA 692: Advanced Topics in Anatomical Sciences Literature
Tutorial readings in anatomical sciences with periodic conferences, reports and examinations arranged with the instructor.

Prerequisite: Permission of instructor.

Fall and Spring, 1-2 credits, S/U grading
May be repeated for credit.

HBA 695: Practicum in Teaching

Practical instruction in the teaching of anatomical sciences carried out under faculty supervision.

1-4 credits, S/U grading
May be repeated for credit.

HBA 699: Dissertation Research on Campus

Original investigation under supervision of thesis adviser and committee.

Prerequisite: Advancement to candidacy (G5); permission of thesis advisor. Major portion of research must take place on SBU campus, at Cold Spring Harbor, or at the Brookhaven National Lab.

Fall, 1-9 credits, S/U grading
May be repeated for credit.

HBA 800: Full-Time Summer Research

Full-time laboratory research projects supervised by staff members.

S/U grading
May be repeated for credit.

HBC

Biochemistry

HBC 531: Molecular Foundations of Medicine

An integrated course covering the important aspects of biochemistry, cell biology, human and molecular genetics, and histology. Includes lectures, small group conferences and laboratories and stresses the clinical relevance of the basic science material.

8 credits, Letter graded (A, A-, B+, etc.)

HBB

Pharmacology

HBB 501: Principles of Pharmacology

Basic principles and mechanism of drug distribution, absorption, metabolism and elimination. Principles of chemical carcinogenesis and tumor promotion. Autonomic, smooth muscle and CNS Pharmacology. Pharmacology of specific drugs of historical interest including alcohol, antibiotics, aspirin, nicotine and morphine. Review of anticoagulants & thrombolytic agents, antiparasitic, and drugs for the treatment of allergic conditions and gout. Includes discussion of specific cases taken from clinical practice and a presentation based on a set of selected readings. Cross-listed with BCP 401

Fall, 4 credits, Letter graded (A, A-, B+, etc.)

HBB 502: Advanced Principles of Pharmacology

Spring, 4 credits, Letter graded (A, A-, B+, etc.)

HBB 510: Pharmacology: Principles & Practice

Introduces the basic principles of pharmacology and covers drugs with action in the autonomic and central nervous systems. Includes the discussion of specific cases taken from the clinical practice.

2 credits, Letter graded (A, A-, B+, etc.)

HBB 511: Pharmacology: Principles & Practice

Continuation of HBB 510. Covers the action of drugs acting in the cardiovascular, respiratory, gastrointestinal, renal, and endocrine systems, as well as anticoagulant, anti-inflammatory, anti-microbial and anticancer agents. Includes the discussion of specific cases taken from the clinical practice.

4 credits, Letter graded (A, A-, B+, etc.)

HBB 531: Principles of Medical Pharmacology

Basic principles that underlie actions of drugs on physiological processes with particular reference to their therapeutic and toxic actions. For medical and dental students.

5 credits, Letter graded (A, A-, B+, etc.)

HBB 545: Biochemical Laboratory Techniques

Introduces theoretical principles and experimental techniques used in modern biochemical research. Lectures and homework assignments explore topics in basic molecular and cellular techniques. Prerequisites: Admission to Health Sciences Center program.

Fall, 1 credit, Letter graded (A, A-, B+, etc.)
May be repeated 2 times FOR credit.

HBB 546: Biochemical Laboratory Techniques

Continuation of HBB 545. Lectures and demonstrations present topics in chromatography, mass spectrometry, protein sequencing, sedimentation, electrophoresis, ligand binding, basic pharmacological methods and statistical analysis of data. Includes procedures for the safe handling of toxic chemicals and radioisotopes. Prerequisites: Permission of instructor, admission to graduate Health Sciences Center program.

Spring, 1 credit, Letter graded (A, A-, B+, etc.)
May be repeated 2 times FOR credit.

HBB 553: Signal Transduction

The course will emphasize fundamental concepts in signal transduction (e.g. membrane-protein and protein-protein interactions, amplification of signals), and individual lectures will apply these concepts at each stage of cell signalling from the cell surface to the nucleus, where signal transduction leads to specific gene expression. Crosslisted as HBY 553 or HBB 553.

Prerequisites: Admission to Graduate Health Sciences Center Program, Spring odd years, 3 credits, ABCF grading

3 credits, Letter graded (A, A-, B+, etc.)

HBB 560: Proposal Preparation in Regulatory Biology

A literature-based course focusing on major research areas in molecular and biochemical pharmacology. The first part of the course will expose students to a series of examples of recent grant proposals. The second part of the course will feature student presentations of their research proposals. Due to the coordination of this course with the Qualifying Exam, registration is limited to Pharmacology graduate students.

Fall and Spring, 2 credits, S/U grading
May be repeated 2 times FOR credit.

HBB 580: Selected Topics in Pharmacology

Student seminars and readings on topics arranged through consultation with staff.

0-1 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

HBB 590: Pharmacology Seminars

Advanced research seminars by staff and visiting lecturers.
**Prerequisites:** Full-time pharmacology graduate status. Fall and Spring, 0-1 credits, S/U grading. May be repeated for credit.

**HBM 599: Graduate Research in Pharmacological Sciences**

Original research projects under faculty supervision.

Prerequisites: Full-time pharmacology graduate status. Fall and Spring, 0-12 credits, Letter graded (A-, A+, B+,

**May be repeated for credit.**

**HBM 601: Practicum in Teaching Pharmacology**

Practical experience and instruction in the teaching of pharmacology carried out under faculty orientation and supervision.

Prerequisites: Full-time pharmacology graduate status. Fall and Spring, 0-1 credits, Letter graded (A, A-, B+,

**May be repeated 5 times FOR credit.**

**HBM 631: Graduate Pharmacology I**

Basic principles of pharmacology will be discussed including pharmacokinetics and pharmacodynamics in both normal and various disease states. Major problems in human pharmacology will be considered including obesity, diabetes, hypertension and heart failure. Underlying physiology as well as pathophysiologic background will be presented. Drug design and development will be discussed from both scientific and socioeconomic perspectives.

Prerequisites: Graduate Biochemistry, BMO 520; Molecular Genetics, MCB 503; Graduate Cell Biology BCD 656; or consent of instructor. Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)

**May be repeated 2 times FOR credit.**

**HBM 632: Graduate Pharmacology II**

This course introduces second-year graduate students to chemotherapy agents used to combat bacterial and viral infections as well as cancers. The course develops a detailed understanding of the strategies involved in identifying drug targets in these two diverse therapeutic settings. The antibacterial lectures emphasize the problem of drug resistance and the need to develop new agents to combat resistant organisms. The anti-cancer lectures begin with a comprehensive analysis of the molecular basis of cell transformation leading to neoplastic disease. Lectures on cancer therapy emphasize the contrast between conventional cytotoxic chemotherapy and novel therapeutic approaches guided by recent developments in cancer research. Novel computational biology and structural biology approaches are featured throughout the course. Each student is expected to make two formal journal-club style presentations during the course and to actively participate in group discussion.

Prerequisites: Graduate biochemistry, BMO 520; Molecular Genetics, MCB 503; Graduate Cell Biology BCD 656; Graduate Pharmacology I, HBM 631. Spring, 0-3 credits, Letter graded (A, A-, B+,

**May be repeated 2 times FOR credit.**

**HBM 655: Neuropharmacology**

An advanced course for graduate students interested in developing an understanding of neuropharmacology and research on this topic. Following a general introduction to the nerve cell structure, synaptic and chemical transmission, three themes receptors, receptors as channels, and G-protein-coupled receptors are developed. Recent advances in cell and molecular biology provide the framework for instruction and discussion. This course is offered as both HBM 655 and BNB 655.

Prerequisite: Admission to Graduate Health Sciences Center Program. Spring, 3 credits, Letter graded (A, A-, B+,

**May be repeated 2 times FOR credit.**

**HBM 699: Dissertation Research in Campus**

Original investigation undertaken as part of the Ph.D. program under supervision of thesis adviser and committee. Prerequisite: Advancement to candidacy (G5); permission of thesis adviser. Major portion of research must take place on SBU campus, at Cold Spring Harbor, or at the Brookhaven National Lab.

Prerequisite: Full-time pharmacology graduate status. Fall, 0-9 credits, S/U grading. May be repeated for credit.

**HBM 800: Full-Time Summer Research**

Full-time laboratory research projects supervised by staff members. Summer Term. Prerequisites: Full-time pharmacology graduate status. S/U grading. May be repeated for credit.

**HBM 503: Molecular Genetics**

Introduces the classical work and current developments in lower and higher genetic systems. Covers gene structure and regulation in prokaryotic and eukaryotic organisms, mutational analysis and mapping, transposable elements, and biological DNA transfer mechanisms. Bacteriophage as well as lower and higher eukaryotic systems are used to illustrate aspects of molecular genetic structure and function. This course is offered as both MCB 503 and HBM 503.

Prerequisite: matriculation in graduate program or permission of instructor. Fall, 3 credits, Letter graded (A, A-, B+,

**May be repeated 2 times FOR credit.**

**HBM 509: Experimental Molecular Genetics and Microbiology**

An introduction to modern microbiological research. The selection of laboratories is made in consultation with the student’s advisory committee. By taking part in ongoing projects the student will learn experimental procedures and techniques and become acquainted with research opportunities in the department.

Prerequisites: Matriculation in a graduate program and permission of the graduate studies director and the lab director. Fall, 1-8 credits, S/U grading.

**HBM 510: Experimental Molecular Genetics and Microbiology**

An introduction to modern microbiological research. The selection of laboratories is made in consultation with the student's advisory committee. By taking part in ongoing projects the student will learn experimental procedures and techniques and become acquainted with research opportunities in the department.

Prerequisites: Matriculation in a graduate program and permission of the graduate studies director and the lab director. Fall, 1-8 credits, S/U grading.

**HBM 522: Biology of Cancer**

A short course with the emphasis on cancer as a disease of man. Lectures address human cancer as seen by the clinician and as basic research relates to human disease. This course provides students with a link between courses in cell and molecular biology and the application of this basic information to tumor management. Offered as HBM 522 and HPH 659.

Spring, 2 credits, Letter graded (A, A-, B+,

**May be repeated for credit.**

**HBM 531: Medical Microbiology**

Information derived from molecular and experimental cellular biology is presented to provide a foundation for understanding...
the basic aspects of the growth, regulation, structure, and function of viruses and prokaryotic and eukaryotic cells. The properties of the infectious agents are correlated to human diseases caused by these agents. Laboratory experiments demonstrate basic techniques to identify and quantitate microorganisms.

Prerequisite: Permission of instructor; matriculation as a Stony Brook medical or dental student
Fall, 1-4 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

HBM 599: Graduate Research in Molecular Genetics and Microbiology

Original investigations under faculty supervision.
Prerequisite: Permission of instructor
Fall and Spring, 1-9 credits, S/U grading

HBM 640: Molecular Mechanisms of Microbial Pathogenesis

This course covers the principles and molecular mechanisms of pathogenesis of a selected group of the best understood viral and bacterial pathogens. A major focus of the course relates to pathogen modification of host extracellular and intracellular signalling events, as well as pathogen-host interactions pertaining to the innate, humoral and cellular responses to infection. The material is presented by invited lecturers who are leaders in their fields. This course is directed to graduate students, post-doctorate and medical fellows, and advanced medical students, who are contemplating careers in infectious disease research. Prerequisite: HBM, BMO 503 and BMO 520
3 credits, Letter graded (A, A-, B+, etc.)

HBM 690: Molecular Genetics and Microbiology Seminar

A weekly meeting devoted to current work in the department. Enrolled students present seminars each week throughout the term.
Prerequisite: Permission of instructor.
Fall and Spring, 1 credit, S/U grading
May be repeated for credit.

HBM 691: Readings in Molecular Genetics and Microbiology Literature

Readings in microbiology literature covering areas of molecular biology and genetics.
Prerequisite: Permission of instructor.
Fall, 1 credit, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

HBM 692: Experimental Methods in Molecular Genetics and Microbiology

The goal of this course is to introduce students to the rationale underlying the wide array of new methods in biology, as well as to promote the critical analysis of scientific literature. Lectures will be given about various scientific methods and approaches, and journal articles relating to the concepts introduced will be assigned. A separate discussion section will be held to review and critique the articles, to be led by the students.
1 credit, Letter graded (A, A-, B+, etc.)

HBM 693: Research Proposal Preparation in Molecular Genetics and Microbiology

A course, based upon the literature in molecular genetics and microbiology, to instruct students in scientific writing and the preparation of research proposals. The course will be organized in three parts. In the first section of the course, students will become familiar with the components of the research proposal and will read and evaluate proposals written by the training faculty. Lectures given by the course co-directors will cover the basics of scientific writing, research proposal preparation and the problems and concerns commonly voiced by reviewers of research proposals. In the second section, students will develop two short proposals in the area of molecular genetics and microbiology that are unrelated to their graduate research. One of these short proposals will be selected for development into a full proposal. In the third section, students will develop and write the full proposal. The students' skills in proposal preparation will be enhanced by critiquing the short and full proposals presented by other students in the second and third sections of the course.
Offered
Spring, 1-3 credits, Letter graded (A, A-, B+, etc.)

HBM 699: Dissertation Research on Campus

For the student who has been advanced to candidacy. Original research will be under the supervision of the thesis advisor and advisory committee.
Prerequisite: Advancement to candidacy (G5); permission of thesis advisor. Major portion of research must take place on SBU campus, at Cold Spring Harbor, or at the Brookhaven National Lab.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

HBM 800: Full-Time Summer Research

Full-time laboratory research projects supervised by staff members.
S/U grading
May be repeated for credit.

HNB

Neuroscience

HNB 531: Neuroscience

HBP

Pathology

HBP 511: Pathobiology for Graduate Health Care Practitioners

For graduate students who have obtained primary health care baccalaureate degrees through the case study approach. Covers the underlying principles of modern experimental pathology. Focuses on the clinical aspects of the body system, including relevant underlying biochemistry, structure, or pathophysiology of the organ, tissue, cell or molecular level.
Prerequisites: Undergraduate degree, health care experience, biochemistry or cell biology, anatomy and microbiology.
Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)

HBP 531: General Pathology

Introduces the nature and causes of disease, death, reaction to injury, and repair. Analyzes associated structural changes in cells and tissues, with reference to their functional correlates.
Prerequisites: Histology, gross anatomy, physiology and biochemistry, prior or concurrent microbiology or permission of instructor.
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

HBP 533: Immunology

Principles of immunology for graduate students in the biological sciences, including definition of antigens and antibodies, specificity of the immune response, immunoglobulin structure, the genetics of immunoglobulin synthesis, cellular cooperation in the immune response, hypersensitivity, tolerance immunogenetics. Open to advanced undergraduates.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

HBP 554: Advanced Immunology

Selected topics in immunology are discussed using original research literature as the central focus. Students present and discuss the literature in a seminar format.
HBP 556: Laboratory Medicine
A four-week full-time (6 hr, day) course dealing with clinical laboratory decision making and the basis for the laboratory evaluation of human evaluation of human disease. Didactic and practical presentations by interdepartmental faculty. Intended principally for senior medical students, but also for advanced microbiology or biochemistry students interested in clinical applications. Prerequisite: Permission of instructor. Spring, 2 credits, Letter graded (A, A-, B+, etc.)

HBP 561: Electron Microscopy for Experimental Pathologists
Uses electron microscope (EM), alone and in conjunction with other methodologies in studies of biological dysfunction. Special techniques include histochemistry, enzyme histochemistry, immunohistochemistry, diffraction, stereo-EM and scanning EM. Design of protocols, preparation and interpretation of data. Prerequisite: Permission of instructor. Fall and Spring, 2-6 credits, Letter graded (A, A-, B+, etc.)

HBP 580: Teaching Honors
Selected students whose performance in the basic required courses for the graduate program is in the top 10 percent conduct tutorials for first-year graduate students in the program and other students taking graduate courses for credit. The tutors are supervised and graded by program faculty of the graduate program. Successful completion of this course will make the students eligible to receive an “Honors in Teaching” on their transcript. Prerequisite: Permission of instructor. Fall and Spring, 1-3 credits, Letter graded (A, A-, B+, etc.)

HBP 590: Seminars in Immunology
A series of monthly seminars focusing on research in progress by the participants, current journal articles in the field of immunobiology, and prepared reviews of specified areas in the general field. Prerequisite: MCB Graduate Students Fall and Spring, 1 credit, S/U grading. May be repeated for credit.

HBP 622: Clinical Pathologic Correlations: Gross Pathology
Correlative exercises in clinical pathology and human gross anatomic pathology including surgical biopsy material. Open to students in medical sciences. Prerequisites: Systems pathology and general pathology course. Permission of instructor. Fall, 1-3 credits, Letter graded (A, A-, B+, etc.) May be repeated for credit.

HBP 691: Journal Club in Pathology
Provides students with a forum for acquiring skills involved in the critical analysis and presentation of scientific data by active participation in seminars of major topics in cellular and molecular pathology, and critical discussion of selected topics with presentation of papers from the literature. Prerequisite: MCB Graduate Students Fall and Spring, 1 credit, Letter graded (A, A-, B+, etc.) May be repeated for credit.

HBP 966: Hematology Conference
Teaches a given aspect of hematology, oncology or immunology. Staff from medicine, pathology, and nuclear medicine participate, and usually presents a case to introduce the subject. Various teaching aids, such as review of pathological material, are used. Primarily for health sciences professionals. 1-3 credits, Letter graded (A, A-, B+, etc.) May be repeated for credit.

HBP 967: Tumor Conference
Considers problems in the management of patients with a malignancy and recommendations for a course of therapy for each patient including a review of a particular aspect of cancer treatment or natural history in depth. Functions as the link between the hospital and the Eastern Oncology Cooperative Group. Primarily for health sciences professionals. 1-3 credits, Letter graded (A, A-, B+, etc.) May be repeated for credit.

HBP 968: Advanced Clinical Pathologic Correlations: Gross Pathology
Postgraduate correlative exercises in human gross pathologic anatomy that emphasize the gross pathologic basis for altered function and clinical manifestations of disease. Open to physicians and others with advanced degrees in medical sciences. 1-3 credits, Letter graded (A, A-, B+, etc.) May be repeated for credit.

HBP 969: Anatomical and Surgical Pathology for Residents in Pathology
To provide practical and clinical experience in tissue pathology. During the four week elective the student is given the opportunity to participate in all aspects of autopsies as well as gross and microscopic examination of surgical specimens. There is ongoing review of general and organ system pathology to reinforce structural-functional correlations. This elective is selected by students who plan a career in pathology as a "hands-on" introduction to the specialty. The elective is also chosen by others, particularly individuals who will enter radiology, and who seek to correlate radiographic and pathologic anatomy. Students who are sufficiently interested and motivated may become involved in relatively independent work-up of selected cases. Primarily for health sciences professionals. 1-3 credits, Letter graded (A, A-, B+, etc.) May be repeated for credit.

HBP 971: Renal Clinicipathologic Correlations
A case-oriented, postgraduate course in renal biopsy interpretation and its relationship to patient management. 1 credit, Letter graded (A, A-, B+, etc.) May be repeated for credit.

HBY 500: Short Term Research Projects in Physiology and Biophysics
Short term research project (rotation) under the supervision of a staff member. Prerequisite: Must be a Graduate Students in the Dept. of Physiology & Biophysics. Spring, 1-12 credits, Letter graded (A, A-, B+, etc.) May be repeated 4 times FOR credit.

HBY 501: Physiology
Introduces normal function of human tissues and organs and their regulation by nervous and endocrine systems. Emphasizes the organization and function of physiological control systems and the maintenance of a constant internal environment. Enrollment restricted to fully matriculated graduate students, with permission of instructor. Only Fall. 4 credits, Letter graded (A, A-, B+, etc.)

HBY 502: Medical Physiology
A graduate level approach to the physiology of the organ systems is addressed in a lecture format with emphasis on problem solving. Relevant clinical correlations are addressed at the end of each block insofar as
they illustrate how symptoms and signs of disease result from disordered physiology. Organ Systems addresses the structure and function of the cardiovascular, respiratory, renal, gastrointestinal, endocrine, skeletal, reproductive, and integumentary systems.

HBY 554: Principles of Neuroscience
3 credits, Letter graded (A, A-, B+, etc.)
Participants will study how the nervous system processes information, from the primary physiological concepts of control, communication, signal processing, metabolism and replication. Prerequisites: Systems Physiology, Biochemistry and Permission of Instructor.

HBY 557: Advanced Physiology
3 credits, Letter graded (A, A-, B+, etc.)
This course is designed to introduce students to integrative approaches in biomedical research. Emphasis will be placed on the primary physiological concepts of control, communication, signal processing, metabolism and replication. Prerequisites: Systems Physiology, Biochemistry and Permission of Instructor.

HBY 558: Student Journal Club
1 credit, Letter graded (A, A-, B+, etc.)
Graduate student presentation on a selected topic with faculty consultation.

HBY 560: Special Topics in Physiology and Biophysics
Students seminars on topics to be arranged through consultation with faculty members. Prerequisite: Permission of instructor. Offered Fall and Spring, 1 credit, S/U grading May be repeated for credit.

HBY 561: Statistical Analysis of Physiological Data
Statistical methods useful in analyzing common types of physiological data. Topics include probability, data distributions, hypothesis testing with parametric and non-parametric methods, ANOVA, regression and correlation, and power analysis. Emphasis is on experimental design and appropriate, efficient use of statistical software.

HBY 562: Model-based Analysis of Physiological Data
The analysis of common biochemical and physiological data by non-linear regression of data models and biophysical models of physiological and biochemical processes. Examples include binding kinetics, compartmental mass transfer and spectral analysis. Prerequisite: Permission of instructor, HBY 561

HBY 563: Model-based Analysis of Model-based Analysis of Physiological Data
The analysis of common biochemical and physiological data by non-linear regression of data models and biophysical models of physiological and biochemical processes. Examples include binding kinetics, compartmental mass transfer and spectral analysis. Prerequisite: Permission of instructor, HBY 561

HBY 564: Experimental Techniques in Systems Physiology
A series of lectures and laboratory exercises designed to introduce students to in vivo experimental techniques used in systems physiology. Emphasis will be placed on the ethical use of rodents in biomedical research and the measurement of physiological variables. Data acquisition and analysis processes used in cardiovascular, respiratory, neural, and renal physiology will also be covered. Only

HBY 565: Mathematical Models of Physiological and Biophysical Systems
An introduction to mathematical modeling of cell and tissue function. Topics include the derivation and numerical solution of models of cell homeostasis, membrane transport and excitability, and cell signaling and metabolism. Grading is based on problems, student presentations, and completion of a modeling project. Only Spring.

HBY 566: Full-Time Summer Research
0-1 credits, S/U grading
Practical experience and instruction in the teaching of physiology and biophysics carried out under faculty orientation and supervision. May be repeated for credit.
Full-time laboratory research projects supervised by staff members.
S/U grading
May be repeated for credit.

HCB

Medical Humanities, Compassionate Care & Bioethics

HCB 501: Compassionate Care, Medical Humanities, and the Illness Experience
This course will introduce students to major interpretations of the illness experience, to several classical biographical and autobiographical accounts of illness, and to the important dynamic of compassionate care in the healing relationship. The patient-as-person will be emphasized throughout, as well as the ways in which respect for and empathy toward the patient impacts diagnostic accuracy, patient adherence, and patient and professional satisfaction. Some emotional dynamics of the illness experience will be addressed, such as hope, through the work of eminent physician-writers such as Jerome Groopman, MD. The dynamics of medical mistakes and forgiveness will be explored through psychiatrist Aaron Lazarre's influential writings on effective medical apologies. Some philosophical and metaphysical aspects of personhood and self-identity will be introduced.

Offered in
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

HCB 502: Landmark Cases in Bioethics
What is a life worth living? How do we decide, and who decides, when to use medical technologies such as incubators, ventilators, transplants and reproductive technologies? This is an intensive introduction to some of the cases in medical ethics that have changed the ways that we are born, cared for, and die in American hospitals. Examples of topics include: vaccination and public health; eugenics and human subjects research ethics; the right of privacy and health care; end-of-life planning and treatment; women's bodies and fetal rights; disability rights; religious beliefs and health care; triage and allocation of scarce resources; mental illness and individual rights; global clinical trials; and, bioethics and culture.

Offered in
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

HCB 503: Traditions and Values in Bioethical Conflicts
This course serves as an introduction to Western moral and religious traditions and to the positions about killing, saving, and enhancing that these traditions have informed. It explores the interface between religion and biomedical ethics and then delves into specific issues in health care in light of more general normative concerns such as justice, love, autonomy and rights, utilitarianism, self-sacrifice, gender, virtue, and community. The issues with which the course deals address the plights of real people, in the concrete, who come from particular backgrounds and whose set of values may make them sometimes recalcitrant to possibilities that technology has made (or is just now making) available.

Offered
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

HCB 504: Special Topic in Biotechnology
Just because we can do it, does this mean that we should do it? This course takes a focused look at controversial practices in health care settings, such as organ donation and enhancements, which have been (and are continuing to be) made available with the advancement of technology. Ought we to regard that which technology makes available as unproblematic? What sorts of new issues regarding distributive justice, autonomy, utility, and compassion are ours to consider carefully because of the changing world in which we live?

Offered in
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

HCB 510: Literature, Compassion, and Medical Care
How does literature help us understand the nature of human illness and suffering? Can written works of art, ancient and contemporary, that depict moments of compassion and compassionate acts lay bare the moral, spiritual, psychological and physical reality of suffering? Is there a strong association between literature and medicine, from the viewpoint of physician-writers, such as Anton Chekov and William Carlos Williams, whose literary skills have eclipsed their medical backgrounds. Sherlock Holmes and Doctor Watson were the creations of a physician-writer, Arthur Conan Doyle. Physicians portrayed in literature, such as Dr. Bernard Rieux, in Albert Camus' The Plague, have also explored the relationship between patient and doctor, the nature of healing. This semester-long course will study these relationships through reading of poetry, drama, fiction, memoir, and essay and reflect on the nature of suffering, the intrinsic human need for compassion, and the implications for health and healing.

Offered in
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

HCB 511: Bioethics, Disability & Community
Most people will experience disability at some point in their lives, and for some it will shape their social, personal, family, educational, and employment experiences. Viewpoints on disabilities which have emerged in policy and the broader culture have been explicitly challenged by emerging communities of people with disabilities who seek to speak for themselves and claim full inclusion in society. In this context, bioethicists and disability scholars have found points of both common cause and stark disagreement over issues such as neonatal and end-of-life care, the value and values inherent medical decisions and their outcomes. These bioethical debates occur in the context of debates over the rights of individuals with disabilities to self-determination, accommodations for work and schooling, and the potential for people with disabilities to make unique contributions because of--rather than despite--their disabilities. This course will consider major debates in bioethics in light of recent scholarship in disability studies, drawing on perspectives from philosophy, literature and narrative, history, and sociology.

Offered in
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

HCB 512: Altruism and Bioethics
What is altruism, and what are its evolutionary roots as a moral dynamic? What impact does altruistic action have on the human agent? Does it impact flourishing and health? When is it experienced as overwhelming by medical professionals? Where does altruism fit within medical and nursing professionalism? How is it related to compassionate care? What about the duty to treat in time of epidemic, auto-experimentation, pro-bono medical treatment, high-risk provision of healthcare in time of conflict, healthcare activism, and the commitment to the patient's good as a guiding professional ideal? How does the practitioner strike a balance between the care of patients and the care of the nearest and dearest or the care of the self? How does altruism correlate with pro-social behavior, happiness, and health?

Offered in
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

HCB 513: Disease and Society
What is disease? How do the beliefs, politics, and economies of particular societies shape
how diseases are defined, experienced, and treated? In this seminar, students will explore these questions by analyzing historical documents, scientific reports, and historical scholarship. We will look at disease from multiple perspectives as a biological process, clinical entity, population phenomenon, historical actor, and personal experience. We will pay special attention to how diseases have been recognized, diagnosed, named, classified and counted in different times, places, cultures, and settings based on different environmental and social conditions, medical ideas, diagnostic technologies, and available treatments. The course will begin with a review of major approaches to understanding the manifold relationships between disease and society. The remainder of the course will view disease and society relationships through the lens of specific issues, such as epidemic disease, consumption and affluence, globalization, and risk.

Offered in
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

HCB 514: Global Bioethics
Bioethics is an American invention. Ideas about medicine and morality, of course, go back to antiquity and are documented as medical ethics in Europe, medical morality in China, and under many other names in cultures around the world. Recently, the process of globalization of ideas, medical practices, clinical trials, and migration of patients has led to clashes of culture around issues such as the appropriate standards and control groups for clinical trials, organ transplantation, brain death, and end-of-life care. Issues of religion, morality, public policy, disability rights and policy, and health system structure and payment all shape how particular societies decide to manage divisive issues such as the beginning and end of life. This course will draw on a growing literature on global and transnational cases, policies, and traditions in the ethics of health, public health, and health care.

Offered in
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

HCB 515: Health Policy, History & Ethics
Who gets sick? Who gets health care, what kind, and in what setting? This course covers the major health policy issues of the United States today, including the health status of the U.S. as a whole, the social and economic determinants of health, the role of personal and public health services in affecting health, the organization and financing of health services, and the multiple factors affecting health policies. We will explore the evolution of the US health care system in the past century, and debates about rights to health care or lack thereof, health disparities, conflicts of interest, and the ethics of health policy and practice.

Offered in
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

HCB 516: Ethical Issues in Human Reproduction
New technologies have modified human reproduction in numerous ways, raising profound questions about the moral status of human life and the nature of parental and sibling obligations. This course will investigate the values that attach to different relationships, both familial and general. It will cover questions around the treatment of infertility, surrogate mothering, the commodification of the body, and the elevated expectations of familial obligations that correspond to new reproductive technologies.

Offered in
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

HCB 517: The Problem of Evil: Philosophical, Biological, and Social Dimensions
What is the nature of evil? Can it be the result of brain malfunction, something that is genetically predetermined? Or, is evil something which is part of or at least necessary to know the good? Alternatively, is evil an arbitrary designation, a perspective from which we can wrest ourselves given the right sort of reinvention? In this class, we shall address the problem of evil from scientific, social-scientific, and philosophical perspectives, using fiction and non-fictional sources. Examples of medical evil, such as the Nazi doctors or Tuskegee, can be introduced as case studies.

Offered in
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

HCB 518: Empirical Bioethics
The formal study of bioethics attempts to define ethical courses of action in a world ever increasing in complexity. But in day to day practice, ethical outcomes are expressed through the individual decisions and resulting actions—of human agents. How do individuals form these judgments? How do people become motivated to engage in behaviors that are designed to benefit someone else?

We will explore current scientific approaches to these questions with several areas of emphasis, including a) the neuroscience of compassionate care and altruism, b) cognitive and neuroscientific approaches to understanding judgment and decision making in ethical domains, and c) empirical approaches to quantifying the effects of ethically based policy decisions.

Offered in
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

HCB 519: Public Health Law
This course is a survey of legal and policy issues that have special relevance for public health professionals. Topics may vary, but typically will include many of the following: structure of the U.S. legal system; power of state and federal governments in matters affecting health care; governmental power and the right to privacy; constitutional issues in social welfare benefits; governmental regulation of health care providers and payers; the scope and discretion of administrative agencies in health care; the antitrust laws; the fraud and abuse laws; and negligence in the delivery and financing of health care. The course is taught primarily by Socratic method.

Offered in
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

HCB 598: Independent Study
3 Credits, ABCF Grading
3 credits, Letter graded (A, A-, B+, etc.)
May be repeated 2 times FOR credit.

HCB 599: Special Projects Capstone Course
This course, to be offered in the second (spring) semester, is designed to satisfy the special projects requirement of our program. The first part of the course will be devoted to readings and discussions that further illuminate the methodologies of the interdisciplinary field of medical humanities, compassionate care, and bioethics. Students will develop an appreciation for the standards of high quality scholarship and research through review of carefully selected readings. This will prepare them for the second part of the course, where they pursue and present their own research based on the existing literature. This capstone course will be highly collaborative, entail substantial peer review, and be organized around the development of significant student projects which are intended to represent the beginnings of publishable papers. Our entire faculty will be involved in these projects according to their specific areas of expertise.

Offered in
Spring, 3 credits, Letter graded (A, A-, B+, etc.)
HDO
Oral Biology and Pathology

HDO 700: Dissertation Research off Campus - Domest
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place off-campus, but in the United States and/or U.S. provinces. Please note, Brookhaven National Labs and the Cold Spring Harbor Lab are considered on-campus. All international students must enroll in one of the graduate student insurance plans and should be advised by an International Advisor.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

HIS
History

HIS 500: Historiography
Introduction to historiography through reading and writing about interpretations of history, historical methods, and major historians. Term paper on historian of choice.
3 credits, Letter graded (A, A-, B+, etc.)

HIS 501: Early Modern Europe Seminar:1450-1789
Field seminar in early modern European history, 1450-1789. Surveys the major historical problems and interpretations from the Renaissance to the coming of the French Revolution.
3 credits, Letter graded (A, A-, B+, etc.)

HIS 502: Introduction to Late Modern Europe
Field seminar in late modern European history, 1789-1945. Surveys the major historical problems and interpretations from the French Revolution through the Second World War.
3 credits, Letter graded (A, A-, B+, etc.)

HIS 515: Theme Seminars on Empire, Modernity, and Globalization
Co-scheduled with WST 510.
3 credits, Letter graded (A, A-, B+, etc.)

HIS 516: Theme Seminars on Empire, Modernity, and Globalization

HIS 517: Theme Seminars on Empire, Modernity, and Globalization

HIS 521: Introduction to United States History to the Civil War
Field seminar in U.S. history from the founding of the British colonies to the beginning of the Civil War. Surveys the major topics and interpretations. Required for M.A. students in U.S. history.
3 credits, Letter graded (A, A-, B+, etc.)

HIS 522: Introduction to United States History Since the Civil War
Field seminar in U.S. history from the Civil War to the Cold War. Surveys the major interpretations.
3 credits, Letter graded (A, A-, B+, etc.)

HIS 524: Core Seminar: History, Theory and Practice
Introduction to the theory, practice and writing of history through the reading of theoretical and historical texts and the writing of a research paper. This course meets over the entire academic year, for 3 credits per semester, and is mandatory for all new Ph.D. students. Students entering with an M.A. take it at the discretion of their advisor.
3 credits, Letter graded (A, A-, B+, etc.)

HIS 525: Core Seminar: History, Theory and Practice
Introduction to the theory, practice and writing of history through the reading of theoretical and historical texts and the writing of a research paper. This course meets over the entire academic year, for 3 credits per semester, and is mandatory for all new Ph.D. students. Students entering with an M.A. take it at the discretion of their advisor.
3 credits, Letter graded (A, A-, B+, etc.)

HIS 526: Core Seminar: History Theory and Practice
Introduction to the theory, practice and writing of history through the reading of theoretical and historical texts and the writing of a research paper. This course meets over the entire academic year, for 3 credits per semester, and is mandatory for all new Ph.D. students. Students entering with an M.A. take it at the discretion of their advisor.
3 credits, Letter graded (A, A-, B+, etc.)

HIS 527: Core Seminar: History, Theory and Practice
Introduction to the theory, practice and writing of history through the reading of theoretical and historical texts and the writing of a research paper. This course meets over the entire academic year, for 3 credits per semester, and is mandatory for all new Ph.D. students. Students entering with an M.A. take it at the discretion of their advisor.
3 credits, Letter graded (A, A-, B+, etc.)

HIS 532: Theme Seminar: Gender, Religion and Modernity
May be repeated 5 times FOR credit.

HIS 535: Theme Seminars on Gender, Sexuality and Reproduction

HIS 540: The Black Power Movement
This course examines the Black Power Movement. Stokely Carmichael's call for "Black Power!" broke through commotion of everyday politics during 1966's Meredith March Against Fear. Soon after, and for the next decade, Black Power galvanized African American politics, engendering radical movements for social, political, and cultural transformation that impacted blacks in the United States and beyond. An emerging historiography traces the roots of Black Power in the postwar black freedom movement, finding cultural and political touchstones for future Black Power activism among civil rights renegades, trade unionists, and black nationalists. We will examine works produced during the Black Power era and this new scholarship to analyze the Black Power Movement's legacy in the politics and culture of African Americans. Permission of advisor is required. This course is offered as both HIS 540 and AFS 540.
3 credits, Letter graded (A, A-, B+, etc.)

HIS 541: Introduction to Colonial Latin American History
Field seminar in colonial Latin American history. Surveys major historical problems and debates from the colonial period through the wars for independence. Required for M.A. in Latin American history.
3 credits, Letter graded (A, A-, B+, etc.)

HIS 542: Modern Latin American History Seminar
Field seminar in modern Latin American history. Surveys major historical problems and debates from the post-independence period to the present. This course is offered as both CEG 517 and HIS 542.
3 credits, Letter graded (A, A-, B+, etc.)

HIS 543: Theme Seminars on Gender, Sexuality, and Reproduction

HIS 552: Theme Seminar: Mass Media and Journalism in International Perspectives

HIS 553: Theme Seminars on Nation, State and Civil Society
Topics vary by semester.
3 credits, Offered Fall and/or Spring, 3 credits, Letter graded (A, A-, B+, etc.) May be repeated 3 times FOR credit.

HIS 554: Theme Seminars on Nation, State, and Civil Society

HIS 555: Theme Seminars on Nation, State, and Civil Society

HIS 557: Special Seminars
Topics to be arranged. The seminar is built around actual research activities of students and faculty. The following topics have been covered: Cultural Theory; Sociology of Technology; Micro-sociology; Advanced Topics in Marxist Theory; Sociology of Emotions; Historical Methods; Ethnic Relations; Biosociology; Comparative Stratification; Max Weber; Sociology of the Future; Science of Sociology and Everyday Life; The Study of the World's Advanced Societies; Methods of Behavioral Observation; Social Structure; Sociology of the Family; Cognitive Sociology; Sociology of Work; Transnational Social Movements; Economic Sociology; War and Revolution; Sociology of Gender; Sociology of Culture; Development of Capitalism; Film as a Sociological Research Tool; Funding and Grant Writing; The Three Faces of Social Psychology; A Structural Approach to Organizational Behavior; Professionals and Professionalism; Sociology of Modernity; Globalization and Immigration; Research Support in Sociology; Sociology of Sexual Behavior; Global Sociology; Gender and the Law; Poverty and Homelessness. 3 credits, Letter graded (A, A-, B+, etc.) May be repeated for credit.

HIS 562: Modern African History and/or Asian History Seminar
Field seminar in modern African history. Surveys major topics such as nationalism, anticolonial movements, and modernization. 3 credits, Letter graded (A, A-, B+, etc.) May be repeated 2 times FOR credit.

HIS 563: Introduction to South Asian History
Surveys major topics such as nationalism, anticolonial movements, legacies of British imperialism, and modernization. 3 credits, Letter graded (A, A-, B+, etc.)

HIS 564: Introduction to Chinese History
Field seminar in modern Chinese history. Surveys major historical topics from modernization to revolution to reform and sociocultural change. For MA, MAT, PhD students. 3 credits, Letter graded (A, A-, B+, etc.)

HIS 565: Introduction to Japanese History
Field Seminar in Modern Japanese History surveys major historical topics from reform and modernization to imperialism and postwar reconstruction. For MA, MAT, PhD students. 3 credits, Letter graded (A, A-, B+, etc.)

HIS 570: Theme Seminars in Environment, Science and Health
Spring

HIS 571: Theme Seminars in Environment, Science and Health
Spring

HIS 572: Theme Seminars in Environment, Science and Health
Spring

HIS 581: Supervised Teaching
Teaching practicum that usually accompanies a student's assistantship. 3 credits, S/U grading

HIS 582: Teaching Practicum
Practicum in teaching methods for new assistants. (MA. Workshop required deleted from the curriculum) 3 credits, S/U grading

HIS 584: Directed Readings for M.A. Candidates
Specialized tutorials based on contractual relationship between individual student and faculty. Required for M.A. students. 1-3 credits, S/U grading May be repeated for credit.

HIS 585: Directed Readings for M.A. Candidates
Specialized tutorials based on contractual relationship between individual student and faculty. Required for M.A. students. 1-3 credits, S/U grading May be repeated for credit.

HIS 586: Directed Readings for M.A. Candidates
Specialized tutorials based on contractual relationship between individual student and faculty. Required for M.A. students. 1-3 credits, S/U grading May be repeated for credit.

HIS 587: Teaching Practicum II: American Controversies
HIS 587: Teaching Practicum I: Controversies in American History
HIS 587: Teaching Practicum II: Controversies in American History Offered Fall every year, 1 credit, Letter graded (A, A-, B+, etc.) May be repeated for credit.

HIS 588: Teaching Practicum II: American Controversies
HIS 587: Teaching Practicum I: Controversies in American History
HIS 588: Teaching Practicum II: Controversies in American History Spring, 2 credits, Letter graded (A, A-, B+, etc.) May be repeated 1 times FOR credit.

HIS 595: Reading Colloquium in Women's History
A topics course dealing with such subjects as women in social movements, the place of gender in particular historical circumstances, imperialism and woman, changing views of sexuality, or relations between family policies and other political programs. This course offered as both HIS 595 and WST 595. Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

HIS 601: Research Seminars on Social and Cultural History

HIS 603: Research Seminar on Social and Cultural History

HIS 615: Research Seminars on Empire, Modernity, and Globalization

HIS 616: Research Seminars on Social and Cultural History

HIS 617: Research Seminars on Empire, Modernity, and Globalization

HIS 622: Migration, Diaspora and Transnationalism

HIS 623: Research Seminars on Ethnicity and Migration

HIS 631: Research Seminar: The Social History of Medicine and Health

HIS 632: Research Seminars on Gender and Sexuality
HIS 633: Research Seminars on Gender and Sexuality

HIS 634: Research Seminars on Gender and Sexuality

HIS 652: Research Seminar: Oral History: Methodology and Theory
Topics vary by semester.
3 credits, S/U grading
May be repeated 3 times FOR credit.

HIS 653: Research Seminars on Nation, State, and Civil Society

HIS 654: Research Seminars on Nation, State, and Civil Society

HIS 655: Research Seminars on Nation, State, and Civil Society

HIS 682: Directed Readings for Ph.D. Candidates
Specialized tutorials based on contractual relationship between individual student and faculty member.
1-18 credits, S/U grading
May be repeated for credit.

HIS 684: Directed Readings for Ph.D. Candidates
Specialized tutorials based on contractual relationship between individual student and faculty member.
1-18 credits, S/U grading
May be repeated for credit.

HIS 685: Directed Readings for Ph.D. Candidates
Specialized tutorials based on contractual relationship between individual student and faculty member.
1-9 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

HIS 686: Directed Readings for Ph.D. Candidates
Specialized tutorials based on contractual relationship between individual student and faculty member.
1-18 credits, S/U grading
May be repeated for credit.

HIS 695: Dissertation Prospectus Workshop for Ph.D. Candidates
Required of all Ph.D. candidates in order to prepare a dissertation prospectus. This seminar should be completed either before or in the same semester as the qualifying examination.

HIS 699: Dissertation Research on Campus
Dissertation research under direction of advisor.
Prerequisite: Advancement to candidacy (G5).
Major portion of research must take place on SBU campus, at Cold Spring Harbor, or at the Brookhaven National Lab.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

HIS 700: Dissertation Research off Campus - Domestic
Prerequisite: Must be advanced to candidacy (G5).
Major portion of research will take place off-campus, but in the United States and/or U.S. provinces. Please note, Brookhaven National Labs and the Cold Spring Harbor Lab are considered on-campus. All international students must enroll in one of the graduate student insurance plans and should be advised by an International Advisor.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

HIS 701: Dissertation Research off Campus - International
Prerequisite: Must be advanced to candidacy (G5).
Major portion of research will take place outside of the United States and/or U.S. provinces. Domestic students have the option of the health plan and may also enroll in MEDEX. International students who are in their home country are not covered by mandatory health plan and must contact the Insurance Office for the insurance charge to be removed. International students who are not in their home country are charged for the mandatory health insurance. If they are to be covered by another insurance plan they must file a waiver be second week of classes. The charge will only be removed if other plan is deemed comparable.
All international students must received clearance from an International Advisor.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

HIS 800: FULL TIME SUMMER RES
May be repeated for credit.

HPD

Population Health and Clinical Outcomes Research

HPD 519: Systematic Review of the Literature

This introductory course will provide students with an understanding of the process used to perform systematic review, as well as provide a "hands on" experience. Each student will perform a systematic review of the literature for their own pre-defined research question of interest. As part of the systematic literature review process, students will learn how to focus their research question; to search the literature to identify relevant studies; to appraise the quality and select studies; and to summarize studies as well as to synthesize their results in context of their original research question raised. To receive a grade for this course, moreover, a scholarly product (e.g., manuscript or letter to the editor) must be submitted to a peer-reviewed journal.

Offered
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

HPD 566: Clinical Trials
This course introduces the design, conduct, and analysis of clinical trials. Topics include types of clinical trials, study design, treatment allocation, randomization and stratification, quality control, sample size requirements, patient consent, and interpretation of results. This course is intended for doctoral level students. (Co-scheduled with HPH 566 Clinical Trials).

Offered
Spring, 2 credits, Letter graded (A, A-, B+, etc.)

HPD 567: Clinical Outcomes Research
This course will provide an overview of the field of clinical outcomes assessment. The specific topics covered include: risk factors identification, clinical outcomes selection, risk adjustment methods, patient safety monitoring, and provider-based quality improvement performance reporting. Students will be introduced to a broad range of clinical outcomes including (but not limited to) short term mortality, treatment-related morbidity, health related quality of life, condition specific metrics, patient satisfaction, health plan member satisfaction, utility theory, and cost effectiveness analysis. An emphasis will be placed in this course on learning how clinical outcomes research can provide data-driven approach to influence patient, provided, program, and policy decisions.

Offered Summer
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

HPD 601: Human Subjects: Ethics and Responsible Conduct of Research
This introductory course incorporates three components focused upon identifying: 1) the ethical principles associated with human subjects research; 2) the primary tenets of
GRADUATE COURSE DESCRIPTIONS Fall 2011

students with some major topics in clinical outcomes research, the statistical models commonly employed, and statistical problems that need to be overcome. Specific topics of interest may include: risk factor analysis#static models; risk factor/disease progression analysis#dynamic models; survival analysis (including multivariable survival analysis); volume-outcomes research; and forecasting models. Statistical techniques and challenges will be discussed within the context of each research topic as they arise. By the end of this course, students should be broadly familiar with these issues, and should be able to evaluate published clinical outcomes research in terms of the appropriateness of models chosen and how well the statistical problems have been addressed, and the reliability of the results. Prerequisites: HPH 507 Biostatistics II or equivalent course.

Offered
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

HPD 686: Mentored Research Project in Population Health and Clinical Outcomes Research
This course will expose doctoral students to a project with which they are not currently familiar in the field of population health or clinical science. Each student will select a faculty mentor for their course project. Students will identify (with the pre-approval of their mentor and course director) a specific problem to address and/or a component of the mentor's project to complete. Following IRB approval or waiver (if applicable), the mentored project will be initiated. Final grade will be based upon the research proposal, project plan, and final project report submitted.

3 credits, Letter graded (A, A-, B+, etc.)

HPD 699: Dissertation Research On Campus
This course is normally taken by advanced PhD students when they conduct research towards their theses. Only PhD students who have been advanced to candidacy (G5 status) can take this course. Students who have the G3 and G4 status and participate in a research project with their advisor can register for HPD 619 Independent Study.

Prerequisite: Must be advanced to candidacy (G5); permission of instructor
Summer, 0-9 credits, S/U grading
May be repeated for credit.

HWC Social Welfare
HWC 500: Field Education I
Placement in practice settings under supervision of an MSW. Students will be graded S/F. Must be taken concurrently with HWC 513.

4-6 credits, S/F graded

HWC 501: Field Education II
A continuation of HWC 500. Students will be graded S/F. Must be taken concurrently with HWC 514.

4-6 credits, S/F graded

HWC 502: Field Education III
Placement in advanced social work practice settings. Supervision provided by a qualified MSW. Students will be graded S/F. Must be taken concurrently with HWC 515 and 516.

4-6 credits, S/F graded

HWC 503: Field Education IV
A continuation of HWC 502. Students will be graded S/F. Must be taken concurrently with HWC 517 and 518.

4-6 credits, S/F graded

HWC 504: Human Behavior and the Social Environment
Introduces a framework for understanding how individuals and families grow, develop and change within their social environment. Critiques interpersonal, intrapersonal and sociostructural theories and their impact on special populations which have been exploited and alienated in society.

3 credits, Letter graded (A, A-, B+,

HWC 505: Psychopathology and Psychopharmacology
Focuses on the concepts of mental health, mental disorders, and the influence of culture on both. The mental health concerns of diverse social, racial, and ethnic groups, particularly those historically devalued and oppressed are covered. In addition, the use and misuse of the classification system of the Diagnostic Statistical Manual (DSM-IVRT) are examined. Examines the distinction between major mental disorders and other forms of dysfunctional behavior and the recognition of systems. Assessment of psychosocial functioning within a multicultural and gender role frame is emphasized. Social work values, roles, responsibilities and ethical considerations are detailed throughout. The role of the social worker as an integral member of the interdisciplinary mental health team is discussed.

3 credits, Letter graded (A, A-, B+,

Stony Brook University Graduate Bulletin: www.stonybrook.edu/gradbulletin
Recognizes the centrality of health as an issue in all people's lives. The issue of health and well-being are issues of concern regardless of practice setting or intervention modality utilized. It is with this in mind, that the School embraces the concept of health as an organizing principle and theme. Serves as an introduction to the concept of health and its connection to social work. The health Care delivery system, managed care, health care financing, epidemiology, ethics, and complimentary medicine are addressed. The impact of race and culture on the health status of people in this society are covered. Current major public health problems are also addressed.

3 credits, Letter graded (A, A-, B+, etc.)

HWC 507: Master's Project
Students complete a master's project under the sponsorship of a faculty member. Advanced Practice Elective.

3 credits, Letter graded (A, A-, B+, etc.)

HWC 508: Continuation of Master's Project
A continuation of HWC 507 for students who did not finish their Master's Project during the term in which they had registered for it. Students will be graded S/F. Advanced Practice Elective. Prerequisite: HWC 507
S/F graded

HWC 509: Parameters of Social and Health Policy I
Introduces students to United States social policy, with a special emphasis on political, economic, and social factors that have affected its historical development, particularly in reference to oppressed groups. Explores relationship of social policy to social work practice. Offered as HWC 509 and HPH 620.

3 credits, Letter graded (A, A-, B+, etc.)

HWC 510: Parameters of Social and Health Policy II
Utilizes frameworks for social policy analysis. Explores continuing dilemmas in policy development. Stresses effects of social movements and social change on social policy. Prerequisite: HWC 510

3 credits, Letter graded (A, A-, B+, etc.)

HWC 511: Research I
Examines the basic concepts and methods of data collection (e.g., surveys, experimental designs, field research, unobtrusive designs) used in social research. Primarily prepares the student to understand and develop a research proposal and to critique methods used in research articles that address critical issues in social work practice.

3 credits, Letter graded (A, A-, B+, etc.)

HWC 512: Research II
Provides instruction in the computation, interpretation, and application of data analytic procedures used in social research. Covers procedures such as descriptive statistics, correlations, chi-square and t-test. Examines their relevancy for analyzing issues in social work practice.

3 credits, Letter graded (A, A-, B+, etc.)

HWC 513: Social Work Practice I
Provides a foundation for Generalist practice, including the knowledge base, values and skills development necessary for effective practice with individuals, families, groups and communities. Students are introduced to the helping process across client systems and across the life span through a strengths perspective and empowerment approach to practice. Introduces the concept of resilience as a foundation to their understanding of human development. Must be taken concurrently with HWC 500.

3 credits, Letter graded (A, A-, B+, etc.)

HWC 514: Social Work Practice II
A continuation of HWC 513. Revisits the helping process in greater depth with specific reference to special considerations for work with families, groups, community and organizations. The broad range of social work roles across client systems is considered. Deepens knowledge of generalist practice and skill development. Must be taken concurrently with HWC 501. HWC 504 is taken concurrently. Prerequisites: HWC 500 and 513.

3 credits, Letter graded (A, A-, B+, etc.)

HWC 515: Advanced Social Work Micro Practice I
Focuses on the helping process with integration of increased understanding of the significance of transactions between people and their environments. Emphasizes the development of advanced theory and practice skills. A focus is placed on developing assessment and diagnosis skills alongside understanding client's defenses, coping mechanisms, and the genetic, familial, cultural, and social factors that influence psychiatric diagnoses. The evaluation of intervention effectiveness, service delivery in an agency context, professional role and conduct are woven throughout the course. Must be taken concurrently with HWC 502 and 516. Prerequisites: HWC 500, 501, 513, 514.

3 credits, Letter graded (A, A-, B+, etc.)

HWC 516: Advanced Social Work Macro Practice I
Emphasizes the understanding of theories and the development of advanced skills key to practice with groups, communities and organizations. Focus is placed on strategic planning, management, evaluation, policy analysis and development, program development, and organizational analysis and change as as applied in the health and social welfare fields. Must be taken concurrently with HWC 502 and 515. Prerequisites: HWC 500, 501, 513, 514.

3 credits, Letter graded (A, A-, B+, etc.)

HWC 517: Advanced Social Work Micro Practice II
Emphasizes professional responsibilities for ongoing self-assessment and developing a critically reflective stance to practice. Concentrates on skill development and working with populations at risk; a concurrent major focus is placed on the different theoretical perspectives, evidenced-based social work practice models and interventions. A critical analysis of case material and social systems designed to meet client systems needs is stressed toward the development of micro or clinical interventions within a variety of settings and client systems, most particularly the individual, family group, organization, and community. Must be taken concurrent with HWC 503 and 518.

3 credits, Letter graded (A, A-, B+, etc.)

HWC 518: Advanced Social Work Macro Practice II
Emphasizes advanced theory and practice skills in community organization and program development. Program planning and management decisions based on the use of consumer oriented methodologies is stressed. A focus is placed on professional responsibility for continuing self-assessment and evaluation. Must be taken concurrently with HWC 503 and 517. Prerequisites: HWC 502, 515, 516

3 credits, Letter graded (A, A-, B+, etc.)

HWC 520: Advanced Social Work Practice with the Aged
Examines concepts and strategies for working with the elderly at the primary, secondary, and tertiary levels of intervention. Presents and critically analyzes a variety of approaches in working with the elderly and their families. Examines interventions with the well elderly living in the community, the elderly who suffer some disabilities but who are still living...
in the community and the elderly who are institutionalized. Advanced Practice Elective. 2 credits, Letter graded (A, A-, B+, etc.)

HWC 521: Ethnic Sensitive Social Work Practice
Provides a theoretical framework and focuses on the development of the skills necessary to provide effective culturally sensitive social work services to diverse individuals, families, groups and communities. The special problems faced by groups traditionally devalued and oppressed are examined. Emphasizes skills in working for institutional change and social justice. Advanced Practice Elective. Co-scheduled with HWC 321. 2 credits, Letter graded (A, A-, B+, etc.)

HWC 522: Human Sexuality
Identifies personal attitudes and judgments about sexually related behaviors. Critically examines factual information derived from research in human sexuality and covers a wide range of sexual behavior from a knowledge base. Advanced Practice Elective. 2 credits, Letter graded (A, A-, B+, etc.)

HWC 523: Growing Old in America: The Social Conditions-Policy and Practice Implications
Explores the social, political and economic conditions related to aging including long-term care in this society. Identifies social policies and program formats that enhance wellness and support dependencies from a positive perspective. Enrichment Elective. Co-scheduled with HWC 323. 2-3 credits, Letter graded (A, A-, B+, etc.)

HWC 524: Children and Adolescents Who Grieve
Focuses on issues related to bereavement in children and young people. Children and adolescents who struggle with the crisis of loss is a special population that is often overlooked. Explores the emotional response of people who grieve. Mental health professionals that provide treatment to this population must acquire specialized knowledge and skills to assist in healing wounded children. Upon completion students will have an increased understanding of the developmental implications of loss in childhood, assessment of bereavement, and treatment interventions specific to bereaved children and adolescents. Enrichment Elective. Co-scheduled with HWC 324. 2 credits, Letter graded (A, A-, B+, etc.)

HWC 525: Anger Management
Presents concepts of anger management within a bio-psycho-social context. Students learn how to recognize external manifestations of anger in themselves, clients, organizations and communities. Focus is on assessment of clients' ability to both recognize anger ('residual' as well as anger 'masking underlying feelings') and methods used for coping. Anger management concepts and skills at the micro, mezzo and macro levels of practice are explored, including anger management strategies that can be taught to clients as part of an intervention plan. Environmental and societal factors as "igniting events" of anger in individuals, families, groups and communities are examined. Appropriate assessment and interventions at all levels of practice are delineated. Enrichment Electives. Co-scheduled with HWC 325. 2 credits, Letter graded (A, A-, B+, etc.)

HWC 529: Complementary and Alternative Medicine
Human service workers are often required to discuss issues of health and healing. Many individuals, by virtue of their culture, experiences and/or choice, often adhere to a combination of nontraditional and traditional beliefs regarding health care. Familiarizes students with those methods and beliefs most often found in specific cultures. Students will develop an appreciation of each practice in order to interact with clients from a strengths perspective and will gain an international perspective on health care modalities. Enrichment Elective. Co-scheduled with HWC 329. 2 credits, Letter graded (A, A-, B+, etc.)

HWC 530: Case Management in Human Services
Case management has grown dramatically in the human service field over the last twenty years in response to the growing service needs of the individuals and families facing complex life situations and issues. Examines both the macro level and micro level issues facing case managers and agencies as they provide quality services to often-oppressed populations. Enrichment Elective. Co-scheduled with HWC 330. 2 credits, Letter graded (A, A-, B+, etc.)

HWC 532: International Public Health
Examines the major public health crisis that is impacting the world today. Examines both the stops that are being followed to address this crisis as well as those measures necessary for prevention. Enrichment Elective. 2 credits, Letter graded (A, A-, B+, etc.)

HWC 533: Family Intervention in Health and Mental Health
Focuses on family and marital problems. Examines the environmental, social, economic, psychological and institutional pressures that affect family functioning. Emphasizes intervention skills. Advanced Practice Elective. 2 credits, Letter graded (A, A-, B+, etc.)

HWC 538: Death and Dying; Loss and Separation
Explores student values, attitudes, fears and conceptions relating to death and dying. Examines issues of loss and separation in relation to various age groups, cultural orientations and societal expectations. Focuses on the acquisition of bereavement counseling skills. Enrichment Elective. 2 credits, Letter graded (A, A-, B+, etc.)

HWC 539: Ancestral Medicine
There is an increasing integration of complementary medicine and allopathic medicine. As health professionals, it is important to understand the beliefs and practices of our clients in order to maximize their options and choices. Professionals must be knowledgeable about the healing traditions anchored in different cultures and ethnicity. Co-scheduled with HWC 339. 2 credits, Letter graded (A, A-, B+, etc.)

HWC 540: Social Issues in Popular Culture
Movies have been a useful medium that can illustrate current social issues and family dynamics as well as policy and research dilemmas. Each week a film with a central practice/research/policy issue provides the basis for a lecture and class discussion. Topics focus on a variety of social issues such as family dynamics, bereavement, adoption, domestic violence, abuse, residential placement, policy and research. Enrichment Elective. Co-scheduled with HWC 340. 2 credits, Letter graded (A, A-, B+, etc.)

HWC 541: Youth and Violence
Examines the etiology of youth at risk for violence, using ecological and interpersonal perspectives. Family, school and community risk factors are outlined as well as assessment, intervention and treatment issues. Successful prevention programs are highlighted. Enrichment Elective. 2 credits, Letter graded (A, A-, B+, etc.)

HWC 542: Children of Chaos: The Social Worker's Role
Designed to provide an understanding of the special issues and concerns surrounding work with children. Professional dilemmas and guidelines to aid practice are identified. Special issues involved in work with young children are highlighted. Although the focus is on direct work with children, a family-centered approach is presented. Practitioner roles, the impact of service settings, policy and legislation affecting this area of practice are reviewed as is the knowledge base that serves to guide practice, including formulations of practice theory and empirical research findings. Advanced practice Elective.

2 credits, Letter graded (A, A-, B+, etc.)

HWC 543: Ethics in Health Care Practice

Students will learn basic ethical principles and concepts. Utilizing a problem based learning model, students will have the opportunity to examine many of the critical ethical issues that are impacting professional practice today. Students will use a professional Code of Ethics and examine their implications for practice. Advanced Practice Elective.

2 credits, Letter graded (A, A-, B+, etc.)

HWC 544: Overview of Substance Abuse

An examination of the history and development of alcohol and substance abuse problems in the United States. Focuses on the etiology, psychopharmacology and legal ramifications of the use of licit and illicit substances in our culture. Provides information on a variety of services available to drug abusers, addicted individuals and their families in the fields of prevention, education and treatment. Enrichment Elective. Offered as HWC 544 and HPH 626.

2 credits, Letter graded (A, A-, B+, etc.)

HWC 545: Individual, Group and Family Treatment of Alcoholics and Substance Abusers

Covers alcoholism and substance abuse as family illnesses and their stages of development, as well as the impact these illnesses have on the families of active and recovering alcoholics and substance abusers. Focuses on self-help groups and on traditional and relatively recent modalities used in the treatment of addicted individuals and their families. Advanced Practice Elective.

2 credits, Letter graded (A, A-, B+, etc.)

HWC 546: Working with Adult Children of Alcoholics and Substance Abusers

Focuses on adult children of alcoholic parents and how parents’ illness affects their children’s social, emotional and educational development from infancy to adulthood and into old age. Discusses survival roles of children in alcoholic families and how these affect adult functioning. Examines the continuing effect family alcoholism has on adult children and the intervention strategies used in treatment. Advanced Practice Elective.

2 credits, Letter graded (A, A-, B+, etc.)

HWC 547: Managing Conflict

A major concern for health and human service managers is conflict in organization, community and group settings. The various types of conflicts and the concepts of negotiation and mediation as interventive strategies will be considered. Didactic and experiential learning experiences are utilized. Focus is on analyzing conflict situations and selecting interventive strategies to reduce, contain or heighten the conflict situation. Oppressive conditions, structures and processes are considered major determinants of human suffering and individual and social problems; students examine how these oppressive conditions are present in conflict situations and consider ways of dealing with them. Advanced Practice Elective.

2 credits, Letter graded (A, A-, B+, etc.)

HWC 548: Adolescent Development and Health Promotion

Examines the effect on adolescent development of physiological changes, relationships with peers and family, and societal expectations. Emphasis is on the development of assessment and engagement skills for working with adolescents and their families to help counteract adolescent self-destructive behavior and promote well-being. Advanced Practice Elective.

2 credits, Letter graded (A, A-, B+, etc.)

HWC 549: Overview of Social Work with Special Populations

Examines the issues that social workers must consider when working with traditionally disenfranchised populations. Emphasis will include micro and macro issues when intervening with gay and lesbian individuals, members of diverse racial and ethnic groups, and women, as well as others. The historic as well as contemporary experiences of these individuals’ interactions with the health and human service delivery system will be explored. Enrichment Elective. Co-scheduled with HWC 349.

2 credits, Letter graded (A, A-, B+, etc.)

HWC 550: Culture Centered Social Work Practice

Provides students with an opportunity for self growth while preparing to work with individuals and their families from a culture centered value base. The culture centered foundation practice will provide students with a frame of reference for better understanding and appreciation of the difference of their own culture from the cultures of others. Advanced Practice Elective.

2 credits, Letter graded (A, A-, B+, etc.)

HWC 551: Law and Social Change

Introduces students to the interrelationship of the legal process in the United States and the profession of social work. Focuses on the legal process in general, social welfare law, in particular, and the implications for effective social work practice. Enrichment Elective. Co-scheduled with HWC 351.

2 credits, Letter graded (A, A-, B+, etc.)

HWC 552: Lesbians and Gay Men: Issues in Health Care

An examination of the critical impact that health care policies and services have on lesbians and gay men in American society. Issues related to access to care, discrimination, services, health insurance, health care resources within geographical areas, and the health status of lesbians and gay men are examined. Focuses on the issues that lesbians and gay men encounter in their interactions with the health care system. Enrichment Elective.

2 credits, Letter graded (A, A-, B+, etc.)

HWC 553: Chemical Dependency in Special Populations

Covers alcoholism and substance abuse with populations that have been traditionally devalued and oppressed. Focuses on development of skills and sensitivity to the needs of ethnic groups, women, the elderly, the mentally ill and gay and lesbian people who are chemically dependent. Explores policy and practice issues related to these populations. Enrichment Elective. Offered as HWC 553 and HPH 630.

2 credits, Letter graded (A, A-, B+, etc.)

HWC 554: Working with African Americans and Hispanics

Teaches students to empower, counsel and work with African Americans and Hispanics in the context of their racial, cultural, social, economic, and political reality. Emphasizes students' need to make a conscious inventory of their own backgrounds, including their race, culture and geographic area of rearing and residence, as factors that contribute to their attitudes, behaviors and biases. Covers...
knowledge and skill areas that enhance students' abilities to work effectively with African American and Hispanic individuals, families, groups and communities. Advanced Practice Elective.

2 credits, Letter graded (A, A-, B+, etc.)

HWC 555: Supervision in Health and Human Service Organizations
Prepares social workers for the variety of tasks related to supervisory practice in health care agencies. Supervision is introduced as a teaching process, as an administrative function and as a program development tool. Emphasis is on helping workers function effectively with culturally diverse clients, populations at risk and the chronically ill. Content includes the historical perspective of supervisory practice; supervisor and agency structure; the organizational context of practice; learning theories; concepts of power, authority, and accountability; ethical and clinical issues; supervisory techniques; skill and self awareness; staff and program development and evaluation. Advanced Practice Elective.

2 credits, Letter graded (A, A-, B+, etc.)

HWC 556: Proposal Writing in the Health and Human Service Fields
Provides a comprehensive study of the principles and methods used to prepare program, training, research, demonstration and other types of proposals. Includes extensive workshop practice in developing appropriate writing skills and in locating and accessing funding sources. Advanced practice elective.

2 credits, Letter graded (A, A-, B+, etc.)

HWC 557: Cultural Competency: An Ingredient in Enhancing Treatment Outcomes
Demonstrates that cultural competency, like computer literacy, is a necessity. Outlines how prevention messages and treatment modalities provided within a cultural context are likely to change attitudes or redirect behaviors. There is a new wave of immigrants and a growing assertion of cultural identity by groups who were born in the United States. Therefore, a new communication edict of cultural dialogue is fast becoming part of one's professional mandate. Hence, the ability to interact with people who are culturally different from the professional is a prerequisite to providing culturally competent services to these groups. Advanced Practice Elective. Offered as HWC 557 and HPH 631.

2 credits, Letter graded (A, A-, B+, etc.)

HWC 558: Human Service Administration
An introduction to the practice of administration of public and non-profit agencies, theories of management including alternative decision-making models, understanding of organizational structure and process, external and internal functions including interagency collaboration and personnel and financial management, affirmative action and ethical issues. Combines theory with case examples, practical exercises and other experiential learning modes. Advanced Practice Elective.

2 credits, Letter graded (A, A-, B+, etc.)

HWC 559: Mental Health Evidence-Based Practice for Social Workers
Develops the knowledge and skills necessary for working with individuals with a diagnosis of serious mental illness using recovery-oriented evidence-based practices. Designed for MSW students and MSW mental health practitioners. Familiarizes students with evidence-based practices, within a recovery-oriented paradigm, as a general approach to practice as well as specific evidence-based interventions to use for individuals with a diagnosis of serious mental illness. Students should have a basic knowledge of serious mental illness as pre or co-requisite, however a review will be provided. Will examine research literature to determine the various levels of support for specific interventions and essential principles for translating research into practice. Identifies the appropriate treatment outcomes that reflect effective quality mental health care. Focus is on providing assessment and treatment to a diverse group of individuals with a diagnosis of serious mental and will be discussed in detail. Advanced Practice Elective.

3 credits, Letter graded (A, A-, B+, etc.)

HWC 560: Implications of Racism for Social Welfare
Examines personal and institutional racism in the United States and the effect racism has on the delivery of services to individuals who do not fit the traditional "American model." Examines the historical relationship between racism and social welfare policies, programs and practice, and contemporary strategies for change. Enrichment elective. Offered with HWC 361.

2 credits, Letter graded (A, A-, B+, etc.)

HWC 563: Homelessness, Politics and Public Health
Analyzes homelessness as an issue of social policy, including its history, recent causes, and current demographics. Emphasizes the political and economic context that has made homelessness a major social problem.

Enrichment Elective. Co-scheduled with HWC 363.

2 credits, Letter graded (A, A-, B+, etc.)

HWC 566: Student-Community Development Student Portfolio Project
Provides an opportunity for students to create a portfolio composed of various components that integrates the student's educational experiences and achievements in the Student-Community Development Specialization. Components may include literature reviews, abstracting research articles, analysis of field placements, and integration of social work and student affairs literature.

1-3 credits, Letter graded (A, A-, B+, etc.)

HWC 569: Childhood Sexual Abuse and Long-Term Sequelae: Assessment and Intervention
Introduces students to the incidence and prevalence of childhood sexual abuse as a national problem. Covered are definition issues, sequelae during childhood, family constellation and adult sequelae. Addressed are assessment and current treatment modalities, particularly for families and offenders, ethical and legal dilemmas and the subsequent health related difficulties of this childhood trauma. Special attention is paid to the cultural dynamics in sexual abuse. Students are expected to develop an awareness of and critically analyze current research. Advanced Practice Elective. Offered as HWC 569 and HPH 633.

2 credits, Letter graded (A, A-, B+, etc.)

HWC 575: Child Welfare: An Overview
Covers the impact of historical and contemporary developments within the field of child welfare. Examines the evaluation of child welfare services and the role of child care workers. Examines out-of-home care, foster care, group home care and institutional care within the context of traditional public/voluntary structure of services and the social/political context. Covers services in relation to the changing roles of the family, emergence of child care. Enrichment Elective.

2 credits, Letter graded (A, A-, B+, etc.)

HWC 578: Advanced Social Work with Groups
Explores the principles and practice of group work in assisting clients to maximize psychosocial functioning. Class members will participate in an experience that encourages them to realize the power of the group work process and usefulness of this modality and providing clients with the tools to heal. Group work techniques, context, dynamics,
skills and the role of the group facilitator will be discussed. In presenting group work with special populations students will learn about the impact of issues including development, discrimination, illness, addiction and separation on the commonality of the human experience as it presents in group practice.

2 credits, Letter graded (A, A-, B+, etc.)

**HWC 579: Special Topics in Social Work**

Examines significant timely issues confronting the profession. Topics include violence as a public health problem, issues of aging, racism, gender, AIDS, the media, spirituality, forensic social work, international social work and others. Topics vary each term as faculty develop specific modules that address one or more of these issues. Enrichment Electives. Co-scheduled with HWC 379.

1-3 credits, Letter graded (A, A-, B+, etc.)
May be repeated 4 times FOR credit.

**HWC 580: Seminar on Family Violence**

Examines the phenomenon of family violence in the United States including child abuse, partner abuse and elder abuse. Explores theories of etiology, including patriarchy, intergenerational family dynamics and substance abuse. Examines programmatic approaches and programs for batterers and prevention strategies. Advanced Practice Elective. Offered as HWC 580 and HPH 635.

2 credits, Letter graded (A, A-, B+, etc.)

**HWC 581: Public Health and Community Health Intervention**

Examines many of the critical public health issues of today. Students gain an understanding of the concepts underlying social epidemiology and develop an appreciation of the ways in which the health status of different populations in this country is differentially impacted. Examines community health planning strategies, (e.g. health promotion and health education). Advanced Practice Elective.

2 credits, Letter graded (A, A-, B+, etc.)

2-3 credits, Letter graded (A, A-, B+, etc.)

**HWC 582: Organizational Dynamics and Legal and Ethical Issues in Health Care**

Examines some of the traditional, as well as newer, models through which health care services are delivered. Particular emphasis will be given to the issue of access to health services as well as the location of the professional social worker within these systems. Students will gain the ability to conceptualize many of the critical ethical and legal issues impacting the field today.

**HWC 583: Community Analysis and Health Promotion**

Explores diverse concepts of community, analyzes a range of community structures, processes, and power relationships. Investigates contemporary models, strategies and tactics of community organizing and health promotion in the United States and in selected other countries. Emphasizes efforts by poor people, ethnic minorities of color and women to organize and mobilize community groups and movements. Highlights group and community analysis and organization skills. Advanced Practice Elective. Offered as HWC 584 and HPH 636.

2 credits, Letter graded (A, A-, B+, etc.)

**HWC 585: Health and Social Planning**

Provides a generic understanding of the planning process and exposure to the planning processes used in the organization and delivery of health services. Explores the various backgrounds, lifestyles and coping mechanisms of patients, with particular attention given to class, race, age and sex and how the planning process includes or excludes these factors.

2-3 credits, Letter graded (A, A-, B+, etc.)

**HWC 586: Biostatistics**

An introduction to the analysis and interpretation of quantitative data using biostatistical methods. Examines three interrelated issues: the nature of quantitative data and their relationship to social, psychological and biological concepts, the different ways data can be presented to help others understand research questions and the answers to those questions and the basic and intermediate biostatistical techniques available for analyzing data. Focuses on how data relate to research questions that are of interest to workers in the health care field. Advanced Practice Elective. Prerequisites: HWC 512 or equivalent.

2 credits, Letter graded (A, A-, B+, etc.)

**HWC 584: Community Analysis and Health Promotion**

Explores a range of community structures, processes, and power relationships. Investigates contemporary models, strategies and tactics of community organizing and health promotion in the United States and in selected other countries. Emphasizes efforts by poor people, ethnic minorities of color and women to organize and mobilize community groups and movements. Highlights group and community analysis and organization skills. Advanced Practice Elective. Offered as HWC 584 and HPH 636.

2 credits, Letter graded (A, A-, B+, etc.)

Focuses on central aspects of the HIV/AIDS pandemic, including the current state of medical knowledge. HIV/AIDS and the law, prejudice and discrimination, AIDS activism and organizing, grief/death/dying, psychosocial issues, redefining the medical model, homophobia, racism, sexism and ableism in research, treatment and policy, IV drug use, drug treatment and other related issues. Upon completion of this course, students will have met the educational requirements established by the HIV Primary Care Medicaid Provider Agreement. This requirement is needed to conduct HIV pre- and post-test counseling in hospitals and clinic settings. Enrichment Elective. Co-scheduled with HWC 390.

2 credits, Letter graded (A, A-, B+, etc.)

**HWC 592: Community Building in Higher Education**

Introduces the Student-Community Development Model as an integrated application of social work, community organization and social work practice modalities. The class works together on a joint project that aims to create community on campus.

2 credits, Letter graded (A, A-, B+, etc.)

**HWC 593: Student - Community Development Seminar I**

Examines how political, socio-economic, cultural and health issues impact higher education. Emphasizes how these systems influence and shape student community wellness on the college campus. Critically examines contemporary higher education organizational structures, planning modalities and intervention strategies.

3 credits, Letter graded (A, A-, B+, etc.)

**HWC 594: Student - Community Development Seminar II**

A continuation of HWC 593. Explores and develops intervention strategies, organizational structures and planning parameters utilizing campus-based case studies. Examines the role of change agents within the campus-life arena.

3 credits, Letter graded (A, A-, B+, etc.)

**HWC 595: Independent Study**

Independent study with an individual faculty member.

1-3 credits, Letter graded (A, A-, B+, etc.)
May be repeated 3 times FOR credit.

**HWC 596: Marketing for Health and Human Service Organizations**

Presents theory, principles and methods of marketing as applied to non-profit and
governmental health and human service organizations. Focuses on the planning and implementation of marketing projects aimed at developing programs and attracting clientele, funds and public support. Requires students to analyze and develop a marketing plan for a specific organization. Advanced Practice Elective.

2 credits, Letter graded (A, A-, B+, etc.)

HWC 597: Case Management
Open only to students who have completed the Case Management Certificate Program and have completed 15 additional hours of assignments. Students will be S/F graded.

4-6 credits, S/F graded

HWC 598: Issues in Higher Education
Examines current issues which arise in institutions of higher education utilizing 2 credits, Letter graded (A, A-, B+, etc.)

HWC 599: Maintenance of Matriculation
For students who are maintaining matriculation while engaging in consultation with faculty regarding completion of courses and/or the Master's Project. Students will be graded S/F. 1 credit, S/F graded

May be repeated 6 times FOR credit.

HWC 600: Statistics I
Provides instruction in the computation, interpretation, and application of data analytic procedures used in social research. Discusses procedures such as descriptive statistics, chi-square, and t-tests, while examining their relevancy for analyzing issues in social work practice. Fall Term.

3 credits, Letter graded (A, A-, B+, etc.)

HWC 601: Statistics II
Introduces students to multivariate techniques used in the analysis of various kinds of data. Analysis of Variance, Multiple Regression Analysis, Logistic Regression Analysis, and Log-Linear Regression Analysis, as well as more advanced techniques, such as path analysis and survival analysis, are discussed.

3 credits, Letter graded (A, A-, B+, etc.)

HWC 602: Research Methods I
Presents an overview of the variety of research methodologies utilized in social science and social work, with the goal of providing students with the knowledge and competencies needed to develop and conduct their own research. The course will lead to a sophisticated understanding of the research process including the formulation of research questions, hypothesis development and testing, and choice of research method, involving both quantitative and qualitative methods. Material on quantitative designs will include experimental and quasi-experimental designs, data collection methodologies, scaling, instrument development, and sampling procedures. Material on qualitative designs will address focus groups interviews, key informant interviews, participant observation, unobtrusive observation, text and content analysis, and the use of archival and historical data. Special attention is given to ethical and political issues in the conduct of research.

3 credits, Letter graded (A, A-, B+, etc.)

HWC 603: Research Methods II
A continuation of HWC 602 Research Methods I.

3 credits, Letter graded (A, A-, B+, etc.)

HWC 604: Naturalistic and Qualitative Research
Considered is the application of alternative research methods for different questions. The distinction between quantitative and qualitative approaches and methods in the analysis of qualitative data is explored.

3 credits, Letter graded (A, A-, B+, etc.)

HWC 605: Research Practicum I
Students undertake significant and methodologically rigorous research involving design, implementation, analysis, and dissemination of a research project. The substantive areas will include health, mental health, or substance abuse. School of Social Welfare faculty, affiliated faculty members from the Health Sciences Center and University social science departments, and principal investigators in community research projects will serve as preceptors. Students will spend ten hours each week for two semesters in a practicum setting. Students have a supervised hands-on, practical experience with an ongoing research project. Typical activities include data analysis, interpretation of results, research report writing, subject recruitment and screening, instrument development, or data collection. The primary objective is to strengthen students' ability to synthesize various phases and components of social research. A focus is on articulating linkages among the research questions, the data gathered to address these questions, the techniques selected for manipulating and analyzing the data, and the interpretation of findings. Students are encouraged to pursue publication stemming from the practicum. While the research practicum may not necessarily expose students to the specific population or problem of greatest interest to them, the skills or competencies mastered can prepare students methodologically to carry out their dissertation research plans.

3 credits, S/U grading

HWC 607: Research Practicum II
A continuation of HWC 606 Research Practicum I.

3 credits, S/U grading

HWC 608: Social Welfare Policy Analysis I
An analytical approach to public policy formulation in the areas of health, mental health, and substance abuse involving the impact of environmental forces on policy content. Considered are the effects of various institutional arrangements and political processes as well as inquiry into the consequences of various contemporary public policies. Tools and frameworks of policy analysis are examined. Policy alternatives and policy development and implementation are also considered.

3 credits, Letter graded (A, A-, B+, etc.)

HWC 609: Social Welfare Policy Analysis II
A continuation of HWC 608 Social Welfare Policy Analysis I. Prerequisite: HWC 608. Spring

3 credits, Letter graded (A, A-, B+, etc.)

HWC 610: Organizational Theory and Social Welfare Administration
The focus is on theories and methods available to planners and administrators who function in complex organizational settings. Decision making, political and economic factors, information systems, value conflicts, and adaptations of rational models to emerging realities will be studied. Health and mental health programs will be utilized as exemplars.

3 credits, Letter graded (A, A-, B+, etc.)

HWC 611: Knowledge Building in Social Work: The Philosophy of Applied Social Research
An examination of the major currents of thought that shape the meta-theoretical, theoretoretical, and methodological issues related to knowledge building in social work. The impact of pragmatic philosophy on the current "science versus non-science" debate within social work is reviewed. Special attention is given to epistemological approaches and their relation to qualitative and quantitative research strategies.

3 credits, Letter graded (A, A-, B+, etc.)

HWC 612: Theories of Social Work
An examination of some basic epistemological issues followed by a consideration of conceptual frameworks potentially useful in studying social work practice. Attention will be focused on recent intellectual contributions to social work literature that enlighten professional practice, purpose, and function, as well as historical developments. Students will utilize a critical analytic perspective to assess the state of the art in social work practice theory. Special emphasis will be directed to the program areas of health, mental health and substance abuse, and formulations related to social change. Issues and priorities for research will be considered.

3 credits, Letter graded (A, A-, B+, etc.)

HWC 613: Seminar in Social Work Education

Focus is on the place of social work education in the university with attention to issues of current concern such as the integration of professional education with the scholarly research focus of other academic disciplines. Consideration will be given to educational program structure, content, curriculum development, evaluation, and teaching methodologies. Students will be required to teach a course in the B.S.W. or M.S.W. curriculum under mentorship of a senior faculty member.

3 credits, Letter graded (A, A-, B+, etc.)

HWC 614: Teaching Practicum

The teaching practicum is a supervised experience in teaching at the master’s or undergraduate level in the School of Social Welfare, or in some aspect of academic administration, such as curriculum development, project planning, and/or proposal development. The educational practicum is typically available to doctoral students in the third year. An individualized plan will be developed for implementing the teaching practicum. Practica may include teaching a section of a required graduate/undergraduate course, working as a teaching assistant with a faculty member, and/or co-teaching and working with the curriculum committees and area sequences in curriculum development.

3 credits, S/U grading

HWC 615: Dissertation Seminar I

Students are expected to survey the current state of the art in their area of interest and to develop a written prospectus on a question suitable for dissertation research. In the second semester, students will refine dissertation proposals through presentation and critique in the seminar. Specific techniques and alternatives in studying a variety of dissertation questions are compared.

3 credits, Letter graded (A, A-, B+, etc.)

HWC 616: Dissertation Seminar II

A continuation of HWC 615 Dissertation Seminar I.

3 credits, Letter graded (A, A-, B+, etc.)

HWC 695: Independent Study

HWC 699: Dissertation Research on Campus

Dissertation research under direction of advisor.

Prerequisite: HWC 615

Major portion of research must take place on SBU campus, at Cold Spring Harbor, or at the Brookhaven National Lab.

Fall, 1-9 credits, S/U grading

HWC 700: Dissertation Research Off Campus - Domestic

Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place off-campus, but in the United States and/or U.S. provinces. Please note, Brookhaven National Labs and the Cold Spring Harbor Lab are considered on-campus. All international students must enroll in one of the graduate student insurance plans and should be advised by an International Advisor.

Fall, 1-9 credits, S/U grading

May be repeated for credit.

HWC 701: Dissertation Research Off Campus - International

Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place outside of the United States and/or U.S. provinces. Domestic students have the option of the health plan and may also enroll in MEDEX. International students who are in their home country are not covered by mandatory health plan and must contact the Insurance Office for the insurance charge to be removed. International students who are not in their home country are charged for the mandatory health insurance. If they are to be covered by another insurance plan they must file a waiver be second week of classes. The charge will only be removed if other plan is deemed comparable.

May all international students must receive clearance from an International Advisor.

Fall, 1-9 credits, S/U grading

May be repeated for credit.

HWC 800: Full Time SUMMER RESEARCH

F/T SUMMER RESEARCH

S/U grading

May be repeated for credit.
GRADUATE COURSE DESCRIPTIONS

Explores the physical structure of a computer; machine representation of information; architecture and organization of various mainframe, mini-, and microcomputers; primary and secondary storage; and input and output communication. Architectural choices are compared and used to determine resulting function and performance. Architectural trade-offs are also identified.

3 credits, Letter graded (A, A-, B+, etc.)

May be repeated for credit.

ISE 507: Project Management

The course focuses on both the technical aspects of project management as well as the human aspects. Technical components include project definition, work breakdown structure development, and the use of optimization techniques for planning a project and optimizing schedules. Graphical approaches to project definition are addressed, as are needs analysis, preliminary design, and detailed design and implementation. Human aspects of project management include forming a project team, managing performance, and resolving conflicts.

3 credits, Letter graded (A, A-, B+, etc.)

ISE 516: Systems Engineering Principles

An introduction to the full range of system engineering concepts, tools and techniques. These elements are applied to both large- and small-scale projects. The course provides a review of the stages of an integrated, top-down, life-cycle approach to design engineering -- from analysis of customer requirements to maintenance and support, from definition of system operational concepts through material disposal and ability and maintainability engineering, human factors, safety, logistics engineering, quality engineering and value-cost engineering. The course also includes a treatment of crucial management issues, such as the planning and development of System Engineering Management Plans (SEMPs), work breakdown structures (WBSs), cost projections and supplier selection and management.

3 credits, Letter graded (A, A-, B+, etc.)

May be repeated 2 times FOR credit.

ISE 517: Human Factors in Systems Engineering

The course focuses on techniques to integrate human factors into the design of systems so that the systems match human abilities and limitations. The course addresses techniques to translate system requirements into project specific design requirements. The course addresses physiological and mental characteristics of humans and emphasizes methods used to generate human factors inputs for engineering work products. The course describes the effect of human factors on each stage of development.

Limited to CSE and ISE graduate students; others, permission of instructor. Cannot be used towards M.S. or Ph.D. degree in Computer Science.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

May be repeated 2 times FOR credit.

ITAL

ITAL 500: Reading Italian

Designed to prepare graduate students to read contemporary research in their respective disciplines published in Italian, the course presents systematic instruction in the fundamentals of reading comprehension and in specialized subject-oriented vocabulary.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

ITAL 501: Contemporary Italy

Analysis of contemporary Italy and its civilization through the study of the development of its historical, cultural, political, and social characteristics. Designed for potential teachers of Italian at the college as well as secondary school levels, this course emphasizes and traces the evolution of the character and institutions of contemporary Italy.

3 credits, Letter graded (A, A-, B+, etc.)

ITAL 502: Special Topics in Italian Cinema

A topics course given in Italian on Italian cinema. Topics may include films of a particular actor, director, genre, theme, or historical period. Smeester supplements to the Bulletin contain specific description when course is offered. May be repeated for credit as topic changes. Prerequisite: advanced oral and written proficiency in Italian.

3 credits, Letter graded (A, A-, B+, etc.)

ITAL 507: Italian Linguistics: Diachronic Development and Synchronic Structures

An examination of the linguistic evolution and the synchronic grammars (phonology, morphology, syntax) of standard Italian and some Italo-Romance dialects.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

ITAL 508: Syntax and Composition

This course analyzes and discusses finer points of Italian grammar and investigates diverse writing styles. Students will develop grammatical drills from elementary through advanced levels. Literary masterpieces are translated to demonstrate types of style and possible alternatives in writing.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

ITAL 510: Advanced Conversation and Composition

An examination of Italian in the context of contemporary Italy, with an eye to the effects of globalization and localism on language and culture. Class readings and conversations focus on today's multifaceted Italy, steering clear of stereotyped images and misconceptions.

Prerequisite: Graduate status.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

ITAL 511: History of the Italian Language

A study of the development of the Italian language beginning with its Latin origins, and continuing through modern times.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

ITAL 512: Italian Dialects

The linguistic structures of the many languages (i.e., "dialekt") spoken in Italy are analyzed. Consideration is also given to the sociolinguistic situation.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

ITAL 513: Romance Linguistics

This course examines the linguistic evolution of the Romance languages from the classical period through modern times. The synchronic grammars of Italian, French, and Spanish are examined.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

ITAL 516: Seminar on Dante

The Vita Nuova, the Opere Minori, and the "Inferno" are studied based on the historical, social, and moral contexts of 13th- and 14th-century Italy. Offered as ITL 516 and CIE 526.

3 credits, Letter graded (A, A-, B+, etc.)

ITAL 517: Seminar on Dante

The "Purgatorio" and "Paradiso" are studied based on the historical, social, and moral contexts of 13th-and 14th-century Italy.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

ITAL 518: Boccaccio: Seminar

Stony Brook University Graduate Bulletin: www.stonybrook.edu/gradbulletin
The course emphasizes the origin of Italian prose fiction as seen through the first attempts at the short story, such as the Novellino, but it deals mainly with Boccaccio's Decameron as the perfection of the genre.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

**ITL 522: Seminar in Italian Humanism and Renaissance Literature**

Analysis of the works of such writers as Petrarch, Boccaccio, Ariosto, Machiavelli, Castiglione, Aretino, Tasso, and Michelangelo. Study of the relation of the individual works of these writers to broader historical, cultural, and intellectual developments of the period.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

**ITL 541: Studies in 17th- and 18th-Century Italian Literature**

A study of baroque and Enlightenment literatures in Italy, which also takes into consideration the development of other, peripheral genres such as opera, philosophy, and scientific prose. Authors examined include Galileo, Marino, Metastasio, Vico, Goldoni, Alfieri, and others. The topics vary from semester to semester, depending on the authors selected.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

**ITL 551: Studies in Italian Romanticism**

Italian romanticism is compared with the movement as it took place in other countries, such as England, Germany, and France. The works of Foscolo, Leopardi, and Manzoni are studied in the philosophical and sociological contexts of the period.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

**ITL 552: Studies in the Modern Novel**

A study of the development of the Italian novel from Verga to the latest trends. Stress is placed on the major shifts in sensibility occurring at the beginning of the 19th century and after World War II.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

**ITL 562: Studies in Contemporary Literature: Contemporary Italian Poetry: The Quest for Meaning**

Studies in 20th century literature.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

May be repeated for credit.

**ITL 571: Free Seminar**

Courses given in the past have covered a single author, genre, and other topics.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

**ITL 581: Independent Individual Studies**

Fall and Spring, alternative years, 1-6 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

**ITL 582: Language Proficiency**

Second language acquisition for M.A., M.A.T. and Ph.D. candidates from other Programs.

Fall, 1-6 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

**ITL 595: Practicum in Teaching**

Fall and Spring, 1-3 credits, S/U grading
May be repeated for credit.

**ITL 599: Thesis Research**

May be repeated for credit

**ITL 800: Summer Research**

May be repeated for credit.

**ITL 802: Language Proficiency**

May be repeated for credit.

**ITL 804: Language Proficiency**

May be repeated for credit.

**JRN 500: Introduction to News Media Concepts and Institutions**

In any age when scientific, medical and environmental issues often make news, this course is designed to familiarize students with how the U.S. news media work. Students will learn how the industry is organized, and why it is undergoing fundamental change; how decisions are made about which stories to cover and how prominently to cover them; how the press weighs such values as freedom, privacy and national security; how the press attempts to deal with issues of scientific uncertainty and conflicting information. In exploring the culture and practices of American journalism, the course will focus on recent coverage of science, health and environmental developments. This course is intended for graduate students in health and science who seek a better understanding of the media context in which they will work, as well as for journalism M.S. students who do not have a background in journalism.

Offered

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**JRN 501: Communicating Science: Distilling Your Message**

Current and future scientists and health professionals will learn to communicate clearly and engagingly with different kinds of audiences, at different levels of complexity, using different forms. We'll examine the basics of clear, two-way communication, including knowing and being responsive to your audience, overcoming "the curse of knowledge", having a point, avoiding jargon, using storytelling techniques, being personal, asking questions, and introducing complexity in stages. Students will start by crafting a short, controversial statement about their work and why it matters. We'll expand that to a longer statement, convert it into a brief piece of writing, such as a letter to the editor or a blog post, practice answering questions about it from the public and from the media, plan a public presentation, and learn to apply these skills in the classroom. Skills learned in this course can help scientists and health professionals communicate more effectively with students, potential employers or funders, public officials, family and friends, the press, and colleagues in other disciplines.

JRN501, JRN502, and JRN503 are 1-credit modules, each lasting four or five weeks. Students may take all three consecutively in one semester or may take only one or two.

Fall, 1 credit, Letter graded (A, A-, B+, etc.)

**JRN 502: Communicating Science: Writing for the Public**

Students will practice writing about specific and health material clearly and vividly, in ways not-scientists can understand. They will learn to use analogies, examples and metaphors to illuminate unfamiliar concepts, practice using numbers clearly and translating statistics into conversational English, learn about scientific terms and concepts that are commonly misunderstood by the public. They will learn to introduce complexity gradually, to avoid overwhelming the reader while not "dumbing down" their material. Students will learn to write for different formats, including blogs, letters to the editor or to funders, and op-ed pieces or commentary pieces.

JRN501, JRN502, and JRN503 are 1-credit modules, each lasting four or five weeks. Students may take all three consecutively in one semester or may take only one or two.

Fall, 1 credit, Letter graded (A, A-, B+, etc.)
JRN 503: Communicating Science: Improvisation for Scientists.
This innovative course uses improvisational theater techniques to help students speak more spontaneously and connect more directly and responsively with their audience and with each other. After warm-up exercises, emphasizing physical freedom and verbal spontaneity, students take part in two- and three-person exercises and situational improvisations that focus on paying attention to your listeners, and altering your approach to meet their needs. At the beginning and end of this course, students will deliver a short oral statement about their research or a scientific topic that interests them, so they can measure their progress. This course is not about acting; it's about helping current and future scientists and health professionals connect with their audiences. Science graduate students who had several sessions of improvisation training in a pilot session reported communicating better as teachers, researchers, students, and family members. A glimpse of the process can be seen in a short video on the web page of Stony Brook's Center for Communicating Science: www.stonybrook.edu/journalism/science. 

JRN501, JRN502, and JRN503 are 1-credit modules, each lasting four or five weeks. Students may take all three consecutively in one semester or may take only one or two. Fall, 1 credit, S/U grading

JRN 504: Communicating Science: Using Digital Media
Science and health information increasingly travels by digital media, as new ways emerge for scientists to communicate directly with the public, without the intermediaries of press or public relations. Students will learn how to use blogs, podcasts, Twitter and other forms of social media for two-way communication with different segments of the public, including colleagues in other disciplines. The course will include hands-on instruction in working with digital media, tailored to students' interests and levels of experience.

Offered
Fall, 1 credit, S/U grading
May be repeated 2 times FOR credit.

JRN 505: Communicating Science: Connecting with the Community
Students will learn how to use communication techniques, cultural competency, and health literacy concepts to reach and mobilize the community and key stakeholders on health- and science-related issues related to their research, outreach or community education objectives. The course will incorporate role-playing and community networking skills to help students make connections with key people and groups relevant to their current interests and work. This will require contact with the instructor before the start of the course to discuss students' projects, plans or interests.

Offered
Fall, 1 credit, Letter graded (A, A-, B+, etc.) May be repeated 2 times FOR credit.

JRN 506: Communicating Science: Advanced Writing for the Public
This course is for graduate students in the sciences who have taken JRN 502, Communicating Science: Writing To Be Understood, and want to continue developing and practicing their ability to write about science clearly and vividly for non-expert readers.

Offered
Spring, 1 credit, S/U grading May be repeated for credit.

JRN 507: Introduction to Science and Health Concepts and Institutions
In this course, aspiring journalists without a background in science will be introduced to the values, culture, practices and language of the fields they are learning to cover. The course will explore scientific methods in theory and practice; the structure of scientific and medical education, research and funding in the United States, including the role of business and entrepreneurship; the conventions of scientific publication and conferences; ethical issues, including conflict of interest, transparency and access to information. This course is intended primarily for journalism graduate students.

Offered
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

JRN 508: Communicating Science: Writing To Be Understood
Fall, 1 credit, Letter graded (A, A-, B+, etc.)

JRN 509: Television Reporting and Editing
This course, for students who have no background in broadcast reporting, introduces students to the basics of reporting, writing and editing news stories for television. Students will begin learning how to develop ideas for television, to use sounds and visuals properly, to do live reporting and to do basic video editing. Both on- and off-camera skills will be emphasized.

Offered
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

JRN 510: Basic Reporting and Writing for Journalism
This course, for students who have little or no experience in journalism, introduces fundamentals of reporting and writing. Students will learn how to think critically about scientific claims and controversies and how to write clear, accurate and vivid stories for print or online media. Students will practice such skills as developing sources, finding stories, doing online research, organizing material, using statistics correctly, and presenting technical information in lay terms. Field trips will introduce students to work being done at Brookhaven National Laboratory and Stony Brook University Medical Center. A variety of written forms will be explored including news and trend stories, explanatory or human interest features, profiles, blogging, and first-person essays. This is an intensive course that meets six hours a week and requires at least 12 hours a week of work outside class.

Offered
LIN 522: Phonetics
A study of articulatory phonetics and the international phonetic alphabet, with intensive practice in phonetic transcription from a wide variety of languages. Acoustic phonetics, speech perception, and the applications of phonetics to foreign language teaching.
Prerequisite: Enrollment in TESOL or LIN program or permission of instructor
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

LIN 523: Phonology I
An introduction to the formal study of sound patterns. Problems from various languages serve as the basis for developing a theory of the representation of sound structure.
Prerequisite: Enrollment in LIN program or permission of instructor
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

LIN 524: TESOL Pedagogy: Theory and Practice
Theoretical and practical bases of language and literacy instruction. Inquiry of instructional approaches, standard-based lesson planning, reflective practices, and assessment in the teaching of speaking, listening, reading, and writing. Evaluation of resources and technologies.
3 credits, Letter graded (A, A-, B+, etc.)

LIN 526: Analysis of an Uncommonly Taught Language
Working from primary and secondary sources, students construct an outline of the phonology, morphology, and syntax of a language previously unknown to them.
Prerequisite: Enrollment in TESOL or LIN program or permission of instructor, and, LIN 530, or LIN 521 and LIN 523
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

LIN 527: Structure of English
A description of the major sentence elements, subsystems, and productive grammatical processes of English. The justification of grammatical categories, interaction between systems and processes, and notions of standard and correctness are discussed with a view to their application in the ESL classroom.
Prerequisite: Enrollment in TESOL or LIN program or permission of instructor
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

LIN 529: Content-based Language and Literacy Development
Theory and practice of language and literacy development across disciplines. Students design standard-based curricular modules and assessment, engage in reflective and collaborative practices, and design and evaluate web-based technologies.
Co-requisite LIN 579. (LIN 578 with permission of instructor for non-certification candidates).
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

LIN 530: Introduction to General Linguistics
An introduction to modern theoretical and applied linguistics, including phonology, morphology, syntax, language acquisition, historical linguistics, and sociolinguistics.
Prerequisite: Enrollment in TESOL or LIN program or permission of instructor
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

LIN 532: Second Language Acquisition
Study of the acquisition of a second language by children & adults. The focus is on data; the systematicity of the learner’s errors, the ease of acquisition in childhood, etc., the adequacy of theories (e.g., interlanguage processes, the monitor model, the critical period) to explain data, & the reliability of methods of obtaining data. Students conduct an empirical study testing a current hypothesis.
3 credits, Letter graded (A, A-, B+, etc.)

LIN 535: Historical Linguistics
A study of linguistic change. Some general topics to be discussed are the genetic classification of languages; language families, language and prehistory; reconstruction; types of sound change; types of semantic change; borrowing.
Prerequisite: Enrollment in TESOL or LIN program or permission of instructor
Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)

LIN 541: Bilingualism
Study of the social, linguistic, educational, and psychological aspects of bilingualism. May be co-scheduled with CEL 541
3 credits, Letter graded (A, A-, B+, etc.)

LIN 542: Sociolinguistics
An introduction to major topics in sociolinguistics, including variation theory, language attitudes, language planning, language change, and pidgins and creoles.
3 credits, Letter graded (A, A-, B+, etc.)

LIN 544: Language Acquisition and Literacy Development
In-depth exploration of the theories of literacy and language development of native English
speakers and students who are English language learners in Pre-school through grade 12. The development and assessment of literacy skills among children at various stages of learning development and across disciplines will be examined. Attention will also be given to children with special needs and the integration of technology in the development of literacy skills.  
Prerequisite: Enrollment in a teacher preparation program  
Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)

LIN 550: Selected Topics in Linguistics  
Topics are announced each semester. The course may be repeated for credit if topic differs.
3 credits, Letter graded (A, A-, B+, etc.)  
May be repeated for credit.

LIN 555: Error Analysis  
Study of the systematic errors made by foreign language learners and the potential of various linguistic theories to predict and account for these errors.  
Prerequisite: Enrollment in TESOL or LIN program, and, LIN 522  
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

LIN 571: Curriculum Design and Evaluation  
An in-depth study of curriculum design and evaluation with a focus on needs analysis, goals and objectives, approaches to language learning and teaching, assessment, resources, and program evaluation.  
Prerequisite: Enrollment in TESOL or LIN program and LIN 524. Co-requisite LIN 578. (LIN 579 with permission from instructor.)  
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

LIN 574: Managing Instruction. Assessment, and Resources  
Investigation and evaluation of instructional planning and assessment, content-based curriculum development, and technologies for language and literacy development among English language learners in multi-level classrooms. Partnerships with colleagues, parents and the respective communities are explored.  
Prerequisites: Enrollment in TESOL or LIN program, completion of LIN 529 with a grade of B or higher, permission of department, New York teacher Certification examinations: LAST and ELPA. Co-requisites: LIN 581 & 582.  
Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)

LIN 578: Field Experience in Adult and Tertiary Contexts  
Observation, inquiry, and practice of English language instruction and learning in community-based ESL programs or programs in tertiary contexts. 50 hours of fieldwork.  
Co-requisite LIN 529 or LIN 571.  
Fall and Spring, 1 credit, S/U grading  
May be repeated for credit.

LIN 579: Field Experience in Grades N-12  
Observation, inquiry, and practice in language and literacy development across disciplines for learners from linguistically and culturally diverse backgrounds. Students are placed in variety of educational settings in pre-elementary through secondary levels for 50 hours of fieldwork. 1 credit, may be repeated.  
Co-requisite LIN 524, LIN 529, or LIN 571.  
Fall and Spring, 1 credit, S/U grading  
May be repeated for credit.

LIN 581: Supervised Student Teaching in English as a Second Language: Primary and Middle Level (Grades N-9)  
Prospective ESOL teachers receive supervised practice teaching by arrangements with selected Long Island schools. The student teacher reports to the school to which he or she is assigned each full school day for the entire semester. Applications must be filed in the academic year preceding that in which the student plans to take the course.  
Prerequisite: Enrollment in TESOL program; permission of the department; Co-requisite: LIN 581 and LIN 574  
Fall and Spring, 3 credits, S/U grading

LIN 582: Supervised Student Teaching in English as a Second Language: High School (Grades 10-12)  
Prospective ESOL teachers receive supervised practice teaching by arrangements with selected Long Island schools. The student teacher reports to the school to which he or she is assigned each full school day for the entire semester. Applications must be filed in the academic year preceding that in which the student plans to take the course.  
Prerequisite: Enrollment in TESOL program; permission of the department; Co-requisites: LIN 581 and LIN 574  
Fall and Spring, 3 credits, S/U grading

LIN 591: Directed Readings  
Students read and evaluate the literature on a topic of special academic interest or professional relevance under the direction of a faculty member.  
Prerequisite: Permission of instructor

LIN 592: Directed Research  
Students conduct research on a topic of special academic interest or professional relevance under the direction of a faculty member.  
Prerequisite: Permission of instructor  
Fall and Spring, 1-3 credits, S/U grading  
May be repeated for credit.

LIN 600: Colloquium in Linguistics  
An introduction to research in linguistics, with presentations by faculty and visiting scientists. Topics include current research questions and ethics of research and publishing.  
Prerequisite: Permission of Department, G3 Standing required for 3 credit option  
Fall and Spring, 0-3 credits, S/U grading  
May be repeated for credit.

LIN 621: Syntax II  
A detailed consideration of recent developments in syntactic theory, including treatments of constituency and word order, grammatical relations, typological variation and linguistic universals, and constraints on grammatical rules and representations.  
Prerequisite: LIN 521  
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

LIN 623: Phonology II  
A study of recent developments in phonological theory, with particular attention to nonlinear models of phonological representation and constraint-based models.  
Prerequisite: LIN 523  
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

LIN 624: Morphology and Word Formation  
The internal structure of words and the place of the word in syntax, phonology, and the lexicon. A variety of analytical methods -- distributional, experimental, and computational will be introduced.  
Prerequisite: LIN 521 and LIN 523  
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

LIN 625: Semantics  
An investigation of the role of semantics (the theory of meaning) in the overall theory of grammar, structured around such topics as formal semantics, the interaction of syntax and semantics, and lexical semantics.  
3 credits, Letter graded (A, A-, B+, etc.)
LIN 650: Selected Topics: Graduate Seminar
Topics will be announced each semester. The course may be repeated for credit if topic differs.
Fall or Spring, 0-3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

LIN 651: Syntax Seminar
Topic varies and relates to current issues in the field and research activities of faculty and students. Past topics have included A-dependencies, adjectival and adverbial modification, word order and antisymmetry.
Fall or Spring, 0-3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

LIN 652: Phonology Seminar
Topic varies and relates to current issues in the field and research activities of faculty and students. Past topics have included interface issues (phonetics, morphology, syntax), functional motivations for phonological constraints (articulatory ease, perceptual salience, parsing considerations), intonation, and second language and loanword phonology.
Co-scheduled with LIN426
Fall or Spring, 0-3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

LIN 653: Phonology Seminar
Topic varies and relates to current issues in the field and research activities of faculty and students. Past topics have included interface issues (phonetics, morphology, syntax), functional motivations for phonological constraints (articulatory ease, perceptual salience, parsing considerations), intonation, and second language and loanword phonology.
Co-scheduled with LIN426
Fall or Spring, 0-3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

LIN 654: Graduate Practicum in Teaching
Doctoral candidates will present and discuss their own research work.
Prerequisite: Advanced standing
Fall or Spring, 1-3 credits, S/U grading
May be repeated for credit.

LIN 655: Graduate Practicum in Teaching
May be repeated for credit.

LIN 656: Dissertation Research on Campus
Independent research for the Ph.D. degree.
Open only to candidates for the Ph.D. degree who have advanced to candidacy (G5).
Major portion of research must take place on SBU campus, at Cold Spring Harbor, or at the Brookhaven National Lab.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

LIN 657: Dissertation Research Off Campus
Prerequisite: Must be advanced to candidacy (G5).
Major portion of research will take place off-campus, but in the United States and/or U.S. provinces. Please note, Brookhaven National Labs and the Cold Spring Harbor Lab are considered on-campus. All international students must enroll in one of the graduate student insurance plans and should be advised by an International Advisor.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

LIN 701: Dissertation Research Off Campus - International
Prerequisite: Must be advanced to candidacy (G5).
Major portion of research will take place outside of the United States and/or U.S. provinces. Domestic students have the option of the health plan and may also enroll in MEDEX. International students who are not in their home country are covered by mandatory health plan and must contact the Insurance Office for the insurance charge to be removed. International students who are not in their home country are charged for the mandatory health insurance. If they are to be covered by another insurance plan they must file a waiver second week of classes. The charge will only be removed if other plan is deemed comparable.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

LIN 800: Summer Research
May be repeated for credit.

MAE 501: Foundations of Secondary Mathematics Curriculum
A re-examination of the current middle school and high school mathematics curriculum.
A review of the techniques and discussion of the ideas from a more advanced point of view, including topics in algebra, geometry, elementary functions, and probability and statistics. Competence in basic secondary school mathematical ideas and techniques is tested.
3 credits, Letter graded (A, A-, B+, etc.)

MAE 510: Introduction to Methods of Teaching and Learning Standards
Introduction to the basic methods of teaching middle school and high school mathematics, including study of lesson designs based on National Council of Teachers of Mathematics (NCTM) and New York State standards, and the study of pedagogical techniques including cooperative learning and the uses of technology. Students also engage in guided observation of middle school and high school mathematics classes.
3 credits, Letter graded (A, A-, B+, etc.)

MAE 520: Advanced Methods of Teaching Secondary School Mathematics
The philosophy and goals of mathematics education, with an emphasis on implementation: curriculum development; teaching techniques and styles, and learning theories and styles; lesson planning and assessment. Students will plan an entire unit, the work sample, including lesson plans and assessments, for inclusion in the professional portfolio.
3 credits, Letter graded (A, A-, B+, etc.)

MAE 530: Directed Readings and Research Paper in Mathematics Education
Tutorial studies concerning current issues in Mathematics Education, including recent research and its relation to teaching practice. Students write a 10 page paper for inclusion in the professional portfolio.
Prerequisites: MAE 501 and 510.
Fall, 1 credit, Letter graded (A, A-, B+, etc.)

MAE 540: Clinical Experience
Supervised classroom experience in both middle school and high school settings. These courses must be taken simultaneously.
S/U grading

MAE 551: Supervised Student Teaching in Middle School
Student teaching under the supervision of an experienced teacher in middle school and high school settings. These courses must be taken simultaneously.
Prerequisites: MAE 520, 530, and 540; satisfaction of all other program requirements; permission of the Director of Mathematics Education.
Fall, 3 credits, S/U grading

MAE 552: Supervised Student Teaching in High School
Supervised student teaching under the supervision of an experienced teacher in middle school and high school settings. These courses must be taken simultaneously.
MAR

**MAR 501: Physical Oceanography**
Examines physics of ocean circulation and mixing on various scales with strong emphasis on profound effects of Earth's rotation on motions and distribution of properties. An introduction to physics of estuaries and other coastal water bodies.

- **Prerequisite:** MAE 555 or permission of instructor
- **Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**MAR 502: Biological Oceanography**
Examines biological processes in the ocean, and introduces major ocean biomes and groups of organisms. A broad treatment of energy and nutrient cycling in coastal and open ocean environments.

- **Prerequisite:** Enrollment in Marine Environmental Sciences program or permission of instructor
- **Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**MAR 503: Chemical Oceanography**
Introduction to chemical oceanography. Topics include origin and history of seawater, major and minor constituents, dissolved gases, the carbon dioxide system, distribution of properties in the world ocean, isotopic geochemistry, and estuarine and hydrothermal vent geochemistry.

- **Prerequisite:** Enrollment in the Marine Environmental Sciences program or permission of instructor
- **Spring, 3 credits, Letter graded (A, A-, B+, etc.)

**MAR 506: Geological Oceanography**
An introduction to the geological oceanography of the world ocean with emphasis on the coastal environment; discussions of the physical processes controlling the structure and evolution of the ocean basins and continental margins, the distribution of marine sediment, and the development of coastal features.

- **Prerequisites:** MAE 520, 530 and 540; satisfaction of all other program requirements; permission of the Director of Mathematics Education.
- **Fall, 3 credits, S/U grading

**MAE 554: Student Teaching Seminar**
The student teaching experience (MAE 551/552) serves as a focus for weekly discussions of teaching and learning styles and techniques, and classroom management issues. Includes N.Y. State mandated seminars on child abuse, substance abuse and school violence.

- **Prerequisite:** Permission of the Director of Mathematics Education.
- **Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**MAR 507: Marine Conservation**
The fundamental concepts of conservation science, a synthetic field that incorporates principles of ecology, biogeography, population genetics, systematics, evolutionary biology, environmental sciences, sociology, anthropology, and philosophy toward the conservation of biological diversity will be presented within the context of the conservation of marine resources. Examples drawn from the marine environment emphasize how the application of conservation principles varies in different environments.

- **Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**MAR 510: Modeling Techniques in Chemical Oceanography**
Derivation of solutions to advection-diffusion-reaction equations for marine sediments and waters. One- and multi-dimensional models are developed for dissolved and solid-phase substances in cartesian, cylindrical, and spherical coordinates. Effect of imposing multiple layers on these systems is examined.

- **Prerequisite:** Permission of instructor
- **Spring, 3 credits, Letter graded (A, A-, B+, etc.)

**MAR 511: Benthic Ecology**
This course focuses on the ecological interactions of benthic organisms and their habitat. Topics include life histories, the roles of competition, predation and disturbance, feeding adaptations and food webs, interactions between benthic organisms and water motion, sediment chemistry, and other abiotic factors, and evolutionary history of benthic ecological processes.

- **Spring, 2 credits, Letter graded (A, A-, B+, etc.)

**MAR 512: Marine Pollution**
Review of the physical and chemical characteristics and speciation in the marine environment of organic pollutants, metals and radionuclides including bioavailability, assimilation by marine organisms, toxicity, and policy issues. Crosslisted as MAR 512 or HPH 671.

- **Prerequisite:** MAR 502, MAR 503
- **Fall, 3 credits, Letter graded (A-, B+, etc.)

**MAR 514: Environmental Management**
This is an introduction to environmental management, and will focus on the interplay between science and public policy. Concepts include problem identification and definition, collection and analysis of relevant data to produce information, and the roles of public perception and action in ultimately determining outcomes when consensus is not reached. Specific fields to which these concepts will be applied will be solid waste management and coastal management. Current local problems will be used to illustrate the broader conceptual issues. Offered as MAR 514 and HPH 672. Prerequisite: Permission of instructor

- **Offered in Spring, 3 credits, Letter graded (A, A-, B+, etc.)

**MAR 515: Phytoplankton Ecology**
The biology and ecology of marine phytoplankton. Covered are life cycles, growth, nutrient uptake, grazing, and the effects of environmental factors on growth and survival of phytoplankton. The characteristics of various classes are examined and are related to environmental conditions.

- **Prerequisites:** General biology
- **Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**MAR 517: Waves**
Theory and observations of surface waves, internal waves, and planetary waves; wave-wave, wave-current, and wave-turbulence interactions; surface wave prediction; beach processes.

- **Spring, 3 credits, Letter graded (A, A-, B+, etc.)

**MAR 519: Geochemistry Seminar**
This course explores topics in low-temperature geochemistry as chosen by the instructors and participants. The seminar series is organized around a theme such as early diagenesis, estuarine geochemistry, or aquatic chemistry. Students are required to lead one of the seminars and to participate in discussions.

- **Prerequisite:** MAR 503 or permission of instructor
- **Fall, 1 credit, Letter graded (A, A-, B+, etc.)
  - May be repeated for credit.

**MAR 520: New Production and Geochemical Cycles**
Consideration of oceanic new production for a variety of ecosystems. Quantitative examination of the impact of new production...
on the transport and cycling of major and minor elements and pollutants.

**Pre- or corequisites:** MAR 502, 503

**Spring, 2 credits, Letter graded (A, A-, B+, etc.)**

**MAR 521: Long Island's Groundwater**

This course will cover basic groundwater concepts in unconsolidated sediments, and examine contamination issues in light of Long Island's particular hydrogeology, land use, and waste management history. Mathematical principles will be discussed but not stressed; scientific and technical papers discussing particular concepts or problems, including important local examples, will be closely read.

**Prerequisite: Permission of instructor. Offered as MAR 521 or HPH 673.**

**Fall, 3 credits, Letter graded (A, A-, B+, etc.)**

**MAR 524: Organic Contaminant Hydrology**

There are a host of chemical, biological, and physical processes that affect the transport and fate of organic chemicals in natural waters. This course concerns understanding these processes and the structure-activity relationships available for predicting their rates. The major focus of this class is on contaminant hydrology of soil and aquifer environments, and includes the principles behind remediation and containment technologies. This course is offered as both MAR 524 and GEO 524.

**Prerequisite: GEO 526 or MAR 503 or permission of instructor**

**Spring, 3 credits, Letter graded (A, A-, B+, etc.)**

**MAR 525: Environment and Public Health Engineering/Sanitation**

Review of the interactions of humans with the atmosphere and water resources, especially in the Long Island coastal community. An introduction is provided to the field of environmental health and the practices relevant to an urban/suburban and coastal setting. Offered as MAR 525 and HPH 675.

**Prerequisite: Permission of instructor**

**Spring, 3 credits, Letter graded (A, A-, B+, etc.)**

**MAR 526: Pollutant Responses in Marine Organisms**

This course examines physiological, biochemical, and molecular responses of marine organisms to contaminant stress. Material will be examined through review lectures on the topic and group discussion of the current literature.

**Fall, 3 credits, Letter graded (A, A-, B+, etc.)**

**MAR 527: Global Change**

The course examines the scientific basis behind questions of global change and some of the policy implications of changes to the region and country. Topics include evidence and courses of past climatic changes, greenhouse gases and the greenhouse effect, analogues with other planets, the Gaia hypothesis, climate modeling, and deforestation and the depletion of ozone.

**Prerequisite: Permission of instructor**

**Fall, 2 credits, Letter graded (A, A-, B+, etc.)**

**MAR 528: Ocean Atmosphere Interactions**

This course discusses the fundamental physical mechanisms through which the ocean and atmosphere interact. These principles are applied to the understanding of phenomena, such as the El Nino Southern Oscillation, the effects of sea surface temperature on the distribution of low-level winds and development of tropical deep convection, and the effects of tropical deep convection and mid-latitude storms on the ocean's mixed layer. Both modeling and observational aspects are discussed. Material will be taken from selected textbooks, as well as recent literature.

**Prerequisite: Permission of instructor**

**Fall, 3 credits, Letter graded (A, A-, B+, etc.)**

**MAR 529: Isotope Geochemistry**

This course deals both with the use of radiocarbon and stable isotope applications to the earth sciences.

**Fall, 3 credits, Letter graded (A, A-, B+, etc.)**

**MAR 530: Organic Geochemistry**

Introduction to the organic chemistry of the earth, oceans, and atmosphere. Topics include production transformation and fate of organic matter; use of organic biomarkers and stable and radioisotopes; diagenesis in recent sediments; oil and coal production and composition; dissolved and particulate organic matter in seawater.

**Prerequisite: Permission of instructor**

**Fall, 3 credits, Letter graded (A, A-, B+, etc.)**

**MAR 531: Long Island Marine Habitats**

Focusing on six representative marine environments around Long Island, this course emphasizes the natural history of local marine communities, as well as quantitative ecology, hypothesis testing, and scientific writing. Students visit the sites, measure environmental parameters, and identify the distribution and abundance of common plants and animals. Using qualitative and quantitative methods in the field and laboratory, the class determines major factors that control the community structure in each habitat.

**Fall, 3 credits, Letter graded (A, A-, B+, etc.)**

**MAR 532: Marine Protected Areas - Belize**

Marine Protected Areas (MPAs) are parts of the ocean that are zoned to exclude activities that are potentially detrimental to the ecosystem. Marine reserves are a special type of MPA, in which the harvesting of marine wildlife is prohibited. MPAs are rapidly gaining traction worldwide as a tool to preserve or restore ecosystems, protect endangered species or sustain nearby commercial and recreational fisheries. This course is designed to provide students with a robust background in the science behind the design, implementation and expected outcomes of establishing MPAs. This field course will explore these issues in the context of the Belizean experience where students will travel to Belize and see a number of different MPAs and learn about the challenges, benefits and limitations of MPAs for marine conservation directly from local scientists, managers and rangers.

**Summer, 3 credits, Letter graded (A, A-, B+, etc.)**

**MAR 533: Instrumental Analysis**

Fundamental principles of instrumental chemical analysis and practical applications of molecular spectroscopy and atomic spectroscopy. These two instruments are widely used in environmental problem solving. Lectures cover basic concepts of chemical analysis and the fundamental principles of the analytical techniques to be used. In the laboratory, students gain hands-on experience both by performing a series of required basic chemical determinations (nutrients and trace metals in sediments and in river water) and by undertaking special projects. Students prepare written reports describing the methods, the theory underlying those methods, results, and figures of merit. Students also present their results orally in brief presentations.

**Prerequisites: Permission of instructor**

**Spring, 3 credits, Letter graded (A, A-, B+, etc.)**

**MAR 534: Environmental Law and Regulation**

This course covers environmental law and regulations from inception in common law through statutory law and regulations. The initial approach entails the review of important case law giving rise to today's body of environmental regulations. Emphasis is on environmental statutes and regulations dealing with waterfront and coastal development.
and solid waste as well as New York State’s Environmental Quality Review Act (SEQRA) and the National Environmental Policy Act (NEPA). Offered as MAR 536 or HPH 676. Spring, 3 credits, Letter graded (A, A-, B+, etc.)

MAR 537: Tropical Marine Ecology
The goal of this class is to teach students about the ecology of the tropical coral reef environments through lectures, field trips, snorkeling trips, SCUBA diving trips and student designed research projects. The first half of the course will be devoted to formal lectures, demonstrations, and instructor-led field trips to provide students with a basic knowledge of the common organisms and the roles they play in various coral reef ecosystems. During the second half of the course, with help from faculty, students will develop and carry out individual research projects examining organismal ecology of coral reefs.

4 credits, Letter graded (A, A-, B+, etc.)

MAR 538: Modern Methods of Data Analysis in Atmospheric and Ocean Sciences - Part I
An introduction to basic statistical concepts and their applications to analysis of data in atmospheric and marine sciences. The topics include distribution, statistical estimation, hypothesis testing, analysis of variance, linear and nonlinear regression analysis, and basics of experimental design. In-depth class discussions of the theoretical concepts are accompanied by extensive applications to data sets supplied by the instructor and the students. Prerequisites: MAR or OCN graduate standing or permission of instructor Fall, 3 credits, Letter graded (A, A-, B+, etc.) May be repeated 2 times FOR credit.

MAR 540: Marine Microbial Ecology
An historical perspective of the field, aspects of nutrition and growth, microbial metabolism, and trophodynamic relationships with other organisms. Emphasis on roles of microorganisms in marine environments such as salt marshes, estuaries, coastal pelagic ecosystems, and the deep sea, as well as microbial contribution to geochemical cycles. Contemporary and classical methodologies covered. Prerequisite: MAR 502 or permission of instructor Fall, 3 credits, Letter graded (A, A-, B+, etc.)

MAR 541: Foundations of Atmospheric Sciences I
This course will first give an overview of the atmosphere and the climate system, including weather systems and atmospheric general circulations. It then introduces atmospheric thermodynamics and dynamics at the level appropriate to all students in atmospheric sciences.

3 credits, Letter graded (A, A-, B+, etc.)

MAR 544: Atmospheric Radiation
Discussion of the compositions and radiative components of planetary atmospheres. Blackbody and gaseous radiation with emphasis on the respective roles of electromagnetic theory and quantum statistics. Derivation of the equation of transfer and radiative exchange integrals, with application to energy transfer processes within the atmospheres of Earth and other planets. Fall, 3 credits, Letter graded (A, A-, B+, etc.)

MAR 545: Paleoceneonography and Paleoclimatology
This course will provide an extensive overview of the methods used in paleoclimate research and an examination of important climate events during the Late-Mesozoic and Cenozoic eras. We will discuss proxies used to create paleoclimatic reconstructions forcing mechanisms on interannual to million year time scales, climate effects on geological and biological processes, and the modeling of present climate and extrapolation to past and future climates.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

MAR 546: Marine Sedimentology
Study of sedimentology in the marine environment including an introduction to fluid mechanics, sediment transport theory, quantitative models of sedimentation, and dynamic stratigraphy. Prerequisite: Permission of instructor Fall, 3 credits, Letter graded (A, A-, B+, etc.)

MAR 547: Dynamical Oceanography I
The first course in a two-course series on basic methods and results in dynamical oceanography. This course emphasizes unstratified fluids. Topics covered include but are not limited to basic conservation equations, effects of rotation, geostrophy, potential vorticity conservation, Ekman layers, and Ekman pumping. Prerequisite: MAR 501 or permission of instructor Spring, 3 credits, Letter graded (A, A-, B+, etc.)

MAR 548: Dynamical Oceanography II
Continuation of Dynamics I. Course covers some of the basic effects of stratification. Topics include potential vorticity for baroclinic motion and baroclinic instability. Prerequisite: Dynamical Oceanography I Fall, 3 credits, Letter graded (A, A-, B+, etc.)

MAR 549: Current Topics in Atmospheric Sciences
This course will discuss current research topics in atmospheric sciences and their connections with advance course materials. 0-2 credits, S/U grading

MAR 551: Special Topics in Management
This course involves in-depth examination and assessment of one or two topical problems and issues in the management of fisheries in the mid-Atlantic region. Fisheries management encompasses a diversity of disciplines and interests: biology, ecology, mathematics, law, policy, economics, analytical modeling, sociology, and anthropology. The class conducts a detailed and thorough review of one or two key fisheries management problems that incorporate component issues spanning this range of disciplines. Students form several teams, each team focusing on one aspect of the overall problem and preparing a report detailing that aspect and making recommendations on how management decisions can be improved. Prerequisite: Permission of instructor Fall, 1-4 credits, Letter graded (A, A-, B+, etc.) May be repeated for credit.

MAR 552: Directed Study
Individual studies under the guidance of a faculty member. Subject matter varies according to the needs of the students. Prerequisite: Permission of instructor Fall, 1-12 credits, Letter graded (A, A-, B+, etc.) May be repeated for credit.

MAR 553: Fishery Management
Survey of the basic principles of and techniques for studying the population dynamics of marine fish and shellfish. Discussion of the theoretical basis for management of exploited fishes and shellfish, contrasting management in theory and in practice using local, national, and international examples. Includes lab exercises in the use of computer-based models for fish stock assessment. Prerequisite: Calculus I or permission of instructor
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

MAR 554: Aquatic Animal Diseases
This course is designed to expose students to fundamental and current issues pertaining to host/pathogen interactions in aquatic environments. By the end of the course, students should have a basic understanding of disease processes in aquatic animals; knowledge of the tools used for disease diagnosis; and an appreciation of disease management tools available today. A particular accent is given to the role of the environment as an important factor in infectious and non-infectious diseases.

3 credits, Letter graded (A, A-, B+, etc.)

MAR 555: Introduction to Mathematics for Marine Scientists
Course is designed to develop quantitative thinking and approaches in marine sciences. Topics covered are differential equations, differential and integral calculus, partial differential equations. Discussions include formulation of practical problems, i.e., application of differential equations.

Prerequisite: Calculus I or permission of instructor
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

MAR 557: Case Study and Project Planning Seminar
This seminar will introduce students to case studies in marine conservation carried out regionally, nationally, and internationally through seminars given by professionals in the field. In addition, students will be given direction on how to develop a plan for a case study as well as instruction on how to obtain, analyze, and present data. Students will be required to submit a written project plan for either their Capstone Project or Internship prior to the end of the semester.

Spring, 1 credit, S/U grading

MAR 558: Remote Sensing
Theory and application of remote sensing and digital image analysis to marine research. Students use standard software and PCs for digital filtering, enhancement, and classification of imagery.

Prerequisite: MAR 501, 502, 504, 506, or permission of instructor
Spring, 2 credits, Letter graded (A, A-, B+, etc.)

MAR 559: Risk Analysis, Error and Uncertainty
This seminar style course will explore error estimation, uncertainty propagation, risk analysis, model validation, and decision analysis.

Fall, 2 credits, Letter graded (A, A-, B+, etc.)

MAR 560: Ecology of Fishes
Introduction to current research in the ecology of fishes. Topics such as population regulation, migration, reproductive strategies, predator-prey interactions, feeding behavior, competition, life history strategies, and others are discussed.

Prerequisite: Familiarity with concepts of ecology or biological oceanography
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

MAR 561: Quantitative Fisheries Ecology
The course covers quantitative models that are currently utilized to assess the status of fish stocks and academic pursuits of understanding single-species and ecosystem dynamics. The course builds on basic ecological models such as the density-independent exponential and density-dependent logistic models and introduces equilibrium and non-equilibrium production models and statistical-catch-attage techniques. Recruitment and growth models commonly used in fisheries ecology are also covered. Least-squares, non-linear and likelihood methods are methods utilized in model parameter estimation. Statistical techniques such as bootstrapping and Monte Carlo methods are used to assess uncertainty in models. This course is useful for students that plan academic or management careers in fisheries and wildlife research.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

MAR 562: Early Diagenesis of Marine Sediments
The course treats qualitative and quantitative aspects of the early diagenesis of sediments. Topics include diffusion and adsorption of dissolved species; organic matter decomposition and storage; and diagenesis of clay materials, sulfur compounds, and calcium carbonates. The effects of bioturbation on sediment diagenesis are also discussed. This course is offered as both MAR 562 and GEO 562.

Prerequisite: Permission of instructor
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

MAR 563: Early Diagenesis of Marine Sediments II
The basic principles and concepts of diagenetic processes developed in MAR/GEO 562 are used to examine in detail early diagenesis in a range of sedimentary environments. These include terrigenous and biogenic sediments from estuarine, lagoonal, deltaic, open shelf, hemipelagic, oligotrophic deep-sea, and hydrothermal regions.

3 credits, Letter graded (A, A-, B+, etc.)

MAR 564: Atmospheric Structure and Analysis
Real world applications of basic dynamical principles to develop a physical understanding of various weather phenomena. Topics include the hypsometric equation, structure and evolution of extratropical cyclones, fronts, hurricanes and convective systems, surface and upper air analysis techniques, radar and satellite interpretation, and introduction to operational products and forecasting.

Prerequisite: 1 year of calculus.
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

MAR 566: Air Pollution and Its Control
A detailed introduction to the causes, effects and control of air pollution. The pollutants discussed include carbon monoxide, sulfur oxides, nitrogen oxides, ozone, hydrocarbons and particulate matter. The emissions of these bases from natural and industrial sources and the principles used for controlling the latter are described. The chemical and physical transformations of the pollutants in the atmosphere are investigated and the phenomena of urban smog and acid rain are discussed.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

MAR 568: Scientific Communication
This course is designed to provide first-year graduate students with an introduction to the standards and practices of both proposing and presenting results of oceanographic research. Students will develop skills in communicating in both oral and written formats, and have the opportunity to produce a draft thesis proposal.

2 credits, Letter graded (A, A-, B+, etc.)

MAR 570: Modern Methods of Data Analysis in Atmospheric and Ocean Studies - Part II
Sampling and experiment design considerations, time and frequency domain analysis, Fourier methods, related topics in probability and statistics. Course involves some computer work.

Prerequisite: Permission of instructor
Fall, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated 2 times FOR credit.

MAR 571: Zooplankton Ecology
The course is designed to acquaint the student with the theoretical problems and applied methodology in ecological studies of marine and freshwater zooplankton. Topics will include taxonomy, anatomy, physiology, life history strategies, population dynamics, and food chain interaction.

**Prerequisites:** MAR 502 and permission of instructor

**Spring, 3 credits, Letter graded (A, A-, B+, etc.)**

**MAR 572: Geophysical Simulation**

Basic equations and boundary conditions. Linear and nonlinear instabilities. Finite-difference and time integration techniques for problems in geophysical fluid dynamics. Numerical design of global atmospheric and ocean models.

**Fall, 3 credits, Letter graded (A, A-, B+, etc.)**

**MAR 573: Special Topics-Chemical Oceanography**

This course is designed for the discussion of topics of special interest on demand that are not covered in regularly scheduled courses. Examples of possible topics include carbonate chemistry, isotope chemistry, and microbial chemistry. Prerequisite: Permission of instructor

**Spring, 1-4 credits, Letter graded (A, A-, B+, etc.)**

**May be repeated for credit.**

**MAR 574: Special Topics: Ocean Dynamics**

Introductory dynamical oceanography, framework and applications.

**1-4 credits, Letter graded (A, A-, B+, etc.)**

**May be repeated for credit.**

**MAR 575: Special Topics-Geological Oceanography**

The course proposes to take several views of the ecology and biogeochemistry of intertidal wetlands to see whether one or more of these views might be useful in reinvigorating interest in the study of wetland function for its own sake. Ecology and plant life history will be studied in addition to geology and wetlands management.

**Spring, 1-4 credits, Letter graded (A, A-, B+, etc.)**

**May be repeated for credit.**

**MAR 576: Special Topics-Biological Oceanography**

The course is designed for the discussion of topics of special interest on demand that are not covered in regularly scheduled courses. Examples of possible topics include grazing in benthic environment, coastal upwelling, the nature of marine ecosystems, and marine pollution processes.

**Prerequisite: Permission of instructor**

**Fall, 1-4 credits, Letter graded (A, A-, B+, etc.)**

**May be repeated for credit.**

**MAR 577: Special Topics-Coastal Zone Management**

The course is designed for the discussion of topics of special interest on demand that are not covered in regularly scheduled courses. Examples of possible topics include microcomputer information systems, environmental law, coastal pollution, dredge spoil disposal, science and technology in public institutions, and coastal marine policy.

**Prerequisite: Permission of instructor**

**Fall and Spring, 1-4 credits, Letter graded (A, A-, B+, etc.)**

**May be repeated for credit.**

**MAR 580: Seminar**

A weekly series of research seminars presented by visiting scientists and members of the staff.

**Fall and Spring, S/U grading May be repeated for credit.**

**MAR 584: Applied Marine Ecology Seminar**

This course provides an opportunity for advanced graduate students to practice presenting data on their thesis research in areas broadly related to how individuals and communities of marine organisms respond to changes in their environments. Each student will prepare an abstract of the work they plan to present and assign an appropriate review or research paper for the class to read. They will then prepare a formal presentation of their work suitable for a departmental seminar. Faculty and students will provide constructive criticism of the presentation as well as participate in a discussion of the work. May be taken more than once for credit.

**Fall, 1 credit, S/U grading May be repeated for credit.**

**MAR 588: Molecular Marine Ecology**

DNA analysis offers a new window into the ecology of marine organisms, shedding light on aspects of their biology that are traditionally difficult to study, such as their evolutionary history, population structure, population demographic history and reproductive patterns. In this way, DNA analysis can help us better manage fisheries and conserve endangered marine species. This course is designed to expose graduate students to the burgeoning field of molecular ecology and the application of molecular analyses to fisheries management and conservation. Lectures will be supplemented by a group laboratory project, where students will apply techniques such as DNA extraction, polymerase chain reaction, DNA sequencing and computer based analysis of genetic data to address a contemporary marine conservation or fisheries issue.

**3 credits, Letter graded (A, A-, B+, etc.)**

**MAR 589: Capstone Project in Marine Conservation and Policy**

Students will conduct an in depth capstone study involving independent analysis of available data and produce an original synthesis paper based on a committee-approved, consequential topic in marine conservation. All students will also present their project at the annual Program Symposium.

**Spring, Summer, Fall, 3-6 credits, S/U grading May be repeated for credit.**

**MAR 590: Research**
Original investigation undertaken with the supervision of the advisor. 
Prerequisite: Permission of instructor
Fall and Spring, 1-12 credits, S/U grading
May be repeated for credit.

MAR 593: Atmospheric Physics
Advanced cloud physics; atmospheric convection, and other moist processes.
3 credits, Letter graded (A, A-, B+, etc.)

MAR 594: Atmospheric Dynamics
This course covers atmospheric waves, quasi-geostrophic theory, and atmospheric dynamic instability.
3 credits, Letter graded (A, A-, B+, etc.)

MAR 595: Graduate Seminar in Atmospheric Sciences
Discussion of special research topics centered on monographs, conference proceedings, or journal articles. Topics include climate change, atmospheric chemistry, radiation transfer, and planetary atmospheres. This course is intended primarily for students who have passed the written qualifying examination in atmospheric sciences, although other students may enroll with permission of the faculty seminar leader.
Fall and Spring, 0-3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MAR 598: Synoptic and Mesoscale Meteorology
Course examines the structure and evolution of synoptic and mesoscale systems using observations, modern dynamical analysis, and numerical weather prediction models. Diagnosis of synoptic systems includes applications of quasi-geostrophic theory to baroclinic waves; jet stream and frontal circulations. A survey of the concepts of mesoscale systems includes convective systems, gravity waves, and terrain-coastal circulations. The student will investigate such phenomena in the laboratory as well as individual projects.
Prerequisite: Permission of instructor
Spring, 4 credits, Letter graded (A, A-, B+, etc.)

MAR 599: Atmospheric Boundary Layer Processes
This course provides the theoretical foundation for a quantitative understanding of transport processes and chemical transformations in the atmospheric boundary layer. Topics covered in this course include the equations of motions for the lower troposphere; the budget of turbulent kinetic energy; turbulent fluxes of momentum, heat and mass; treatment of chemical transformations; and the representation of these processes in numerical models.
3 credits, Letter graded (A, A-, B+, etc.)

MAR 601: Dynamic model with Matlab
An introduction to Matlab as a programming language to model the dynamic systems in biology. The course will cover the basics of Matlab, linear algebra, and the matrix, stochastic, and continuous time models of biology
Offered
Spring, 2 credits, Letter graded (A, A-, B+, etc.)

MAR 650: Dissertation Research
Original investigation undertaken with the supervision of research committee.
Fall and Spring, 1-9 credits, S/U grading
May be repeated for credit.

MAR 655: Directed Study
Individual studies under the guidance of a faculty member. Subject matter varies according to the needs of the student.
Prerequisite: Permission of instructor
Fall, 1-9 credits, S/U grading
May be repeated for credit.

MAR 670: Practicum in Teaching
Fall and Spring, 1-3 credits, S/U grading
May be repeated for credit.

MAR 699: Dissertation Research on Campus
Research course exclusively for students who have been advanced to candidacy (G5).
Major portion of research must take place on SBU campus, at Cold Spring Harbor, or at the Brookhaven National Lab.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

MAR 800: Summer Research
Summer Research, 0 credits, S/U grading. May be repeated for credit.
S/U grading
May be repeated for credit.

MAT 511: Fundamental Concepts of Mathematics
Fundamental Concepts of Mathematics. Brief history of mathematics; sets, functions and logic; constructions of number systems; mathematical induction. The main focus of the course will be on the construction and writing of mathematical proofs.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

MAT 512: Algebra for Teachers
Linear algebra, the algebra of polynomials, algebraic properties of the complex numbers, number fields, solutions of equations.
Prerequisite: MAT 511
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

MAT 513: Analysis for Teachers I
Topics in differential calculus, its foundations, and its applications. This course is designed for teachers and prospective teachers of advanced placement calculus.
Prerequisite: MAT 511
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

MAT 514: Analysis for Teachers II
Topics in calculus, its foundations, and its applications. Emphasis is on integration and on numerical techniques. This course is designed for teachers and prospective teachers of advanced placement calculus. Analysis for Teachers I is not a prerequisite for this course.
Prerequisite: MAT 511
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

MAT 515: Geometry for Teachers
A re-examination of elementary geometry using concepts from analysis and algebra.
Prerequisite: MAT 511
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

MAT 516: Probability and Statistics for Teachers
A priori and empirical probabilities; conditional probability; mean and standard deviation; random variables; financial distributions; continuous distributions; sampling; estimation; decision making.
Prerequisite: MAT 511
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

MAT 517: Calculators and Computers for Teachers
Calculators and Computers for teachers. Graphing calculators, programming, computing and curve sketching; Geometers Sketchpad or other computer based classroom tools; educational use of the world wide web.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

MAT 518: Seminar on the Uses of Mathematics
This seminar explores the ways in which secondary school and elementary college mathematics are used in such diverse areas as psychology, sociology, political science,
economics, business, engineering, physics, chemistry, biology, and medicine. Primarily for secondary school teachers of mathematics. Fall, 3 credits, Letter graded (A, A-, B+, etc.)

MAT 519: Seminar in Mathematics in Teaching and Learning
Seminar format. This course involves deliberative group inquiry - through reading, writing and intensive discussion - into mathematics teaching, learning and mathematics education research; analysis and design of cognitively demanding mathematical tasks; and analysis of students' mathematical thinking, written responses, and common misconceptions in the mathematics classroom. Each student completes an action research project focused on a topic selected with guidance from the instructor. 3 credits, Letter graded (A, A-, B+, etc.)

MAT 530: Topology, Geometry I
Basic point set topology: connectedness, compactness, continuity, etc. Metric spaces, function spaces, and topological manifolds. Introduction to algebraic topology: fundamental group and covering space; homology; applications. Fall, 3 credits, Letter graded (A, A-, B+, etc.)

MAT 531: Topology, Geometry II
Foundations of differentiable manifolds: differentiable maps, vector fields and flows, and differential forms and integration on manifolds. Stokes' theorem, Froebenius theorem, Lie derivatives, Immersions and submersions, DeRham homology, cochain complexes, degree of a map, Mayer-Vietoris Theorem. Spring, 3 credits, Letter graded (A, A-, B+, etc.)

MAT 534: Algebra I
Groups: normal subgroups, quotient groups, Lagrange's theorem, class formula, finite p-groups and solvable groups. Sylow's theorems, finitely generated abelian groups, Rings and modules: subrings, fields, prime and maximal ideals, quotient rings, ID's, PID's, UFD's, polynomial rings, field of fractions, the Wedderburn theorem, Hilbert basis theorem, finitely generated modules over a PID. Vector spaces: basis, linear maps and matrices, dual spaces, determinants, eigenvalues and vectors, inner products, spectral theorem for normal operators. Fall, 3 credits, Letter graded (A, A-, B+, etc.)

MAT 535: Algebra II

MAT 536: Algebra III
Selections from the following topics: introductory algebraic number theory, introductory algebraic geometry, algebraic groups, cohomology of groups, homological algebra, advanced field theory and Galois theory, central simple algebras, representations of finite and compact groups. Prerequisite: MAT 535 Fall, 3 credits, Letter graded (A, A-, B+, etc.)

MAT 537: Algebraic Topology
Homology and cohomology groups, homotopy groups and the Hurewicz theorem, the universal coefficient theorem, cup and cap products, Poincare duality, and introduction to spectral sequences. Spring, 3 credits, Letter graded (A, A-, B+, etc.)

MAT 540: Topology in Geometry and Algebra I
Cell complexes, algebraic and geometric definitions of homology, fundamental and higher homotopy groups, Hurewicz theorem, Lefschetz theorem and related topics. Prerequisites: MAT 530, MAT 531 Fall, 3 credits, Letter graded (A, A-, B+, etc.) May be repeated for credit.

MAT 541: Topology in Geometry and Algebra II
Cohomology, relations with obstruction and deformation theory, Poincare', Lefschetz, and Alexander dualities, intersection theory, relations to differential forms, monodromy and related topics. Prerequisites: MAT 530, MAT 531 Spring, 3 credits, Letter graded (A, A-, B+, etc.) May be repeated for credit.

MAT 542: Complex Analysis I
Elementary functions, holomorphic functions. Cauchy theory, power series, classification of isolated singularities, calculus of residues, open mapping theorem, Riemann mapping theorem. Spring, 3 credits, Letter graded (A, A-, B+, etc.)

MAT 543: Complex Analysis II
Monodromy theorem and analytic continuation. Elliptic functions. Dirichlet problem and Green's function. Conformal mappings. Introduction to Riemann surfaces and, or several complex variables. Fall, 3 credits, Letter graded (A, A-, B+, etc.)

MAT 544: Real Analysis I
Ordinary differential equations; Banach and Hilbert spaces; inverse and implicit function theorems; Lebesque measure; general measures and integrals; measurable functions; convergence theorems for integrals. Fall, 3 credits, Letter graded (A, A-, B+, etc.)

MAT 545: Complex Geometry
Foundational material and techniques in complex algebraic and differential geometry: Review of basic results in several complex variables/analytic geometry, sheaves and cohomology of sheaves, complex vector bundles, Chern classes, positivity, Kaehler manifolds, projective manifolds, Hodge decomposition for Kaehler manifolds, Kodaira vanishing theorem, Hard Lefschetz Theorem, divisors and line bundles, Bertini's theorem, Lefschetz theorem on (1,1) classes, blowing up, Kodaira's embedding theorem. Fall, 3 credits, Letter graded (A, A-, B+, etc.) May be repeated for credit.

MAT 546: Differential Equations
Distributions and the Fourier transform; compact operators, Fredholm theory; pseudodifferential operators; Sobolev spaces; regularity theory for elliptic operators; Hodge theorem. Prerequisite: MAT 544, Corequisite: MAT 550 Spring, 3 credits, Letter graded (A, A-, B+, etc.)

MAT 550: Real Analysis II
Representations and decomposition theorems in measure theory; Fubini's theorem; L-p spaces; Fourier series; Laplace, heat and wave equations; open mapping and uniform boundedness theorems for Banach spaces; differentiation of the integral; change of variable of integration. Prerequisite: MAT 544 Spring, 3 credits, Letter graded (A, A-, B+, etc.)

MAT 551: Real Analysis III
Selections from the following topics. Partial differential equations in higher dimensions; Sobolev spaces, calculus of
MAT 552: Introduction to Lie Groups and Lie Algebras  
Prerequisite: MAT 531, MAT 534  
Fall, 3 credits, Letter graded (A, A-, B+, etc.)  

MAT 555: Introduction to Dynamic Systems  
Fundamental themes of dynamic systems and applications to other areas. Topics may include the following: Poincare recurrence and Birkhoff Ergodic Theorem, Smale horseshow, and hyperbolicity. Geodesic flow on constant curvature surfaces, One-dimensional dynamics, Julia sets and the Mandelbrot set, Renormalization, rigidity and universality phenomena, Hamiltonian dynamics and integrability, Kolmogorov-Arnold-Moser Theory (overview), Homoclinic bifurcations and New house phenomenon. 3 credits. Offered in Spring. Prerequisites: MAT 530 and MAT 544.  
3 credits, Letter graded (A, A-, B+, etc.)  

MAT 560: Mathematical Physics I  
Aimed at students affiliated with the RTG program, topics include: Classical field theory (Lagrangian and Hamiltonian), electromagnetism, special relativity, statistical mechanics and thermodynamics, quantum mechanics and quantum field theory.  
3 credits, Letter graded (A, A-, B+, etc.)  

MAT 561: Mathematical Physics II  
Aimed at students affiliated with the RTG program, topics include: Classical field theory (lagrangian and Hamiltonian), electromagnetism, special relativity, statistical mechanics and thermodynamics, quantum mechanics and quantum field theory.  
3 credits, Letter graded (A, A-, B+, etc.)  

MAT 566: Differential Topology  
Vector bundles, transversality, and characteristic classes. Further topics such as imbeddings and immersions, intersection theory, surgery, and foliations.  
Prerequisite: MAT 531  
Fall, 3 credits, Letter graded (A, A-, B+, etc.)  

MAT 568: Differential Geometry  
Connections, curvature, geodesics, parallelism, and completeness. Riemannian manifolds, geometry of sub-manifolds; method of integral formulas; applications to global extrinsic theorems. Riemannian curvature. Gauss-Bonnet theorem, Hopf-Rinow theorem.  
Prerequisite: MAT 531  
Fall, 3 credits, Letter graded (A, A-, B+, etc.)  

MAT 569: Differential Geometry  
First and second variation formulas, conjugate points and Jacobi fields, comparison theory. Curvature and fundamental group: spaces of positive and of negative curvature, space forms, Lie groups, homogeneous spaces, and symmetric spaces. Different topics may be covered depending on the choice of the instructor.  
Prerequisite: MAT 531, MAT 568  
Spring, 3 credits, Letter graded (A, A-, B+, etc.)  

MAT 570: Concepts and Methods of Quantum Mechanics  
Spring, 3 credits, Letter graded (A, A-, B+, etc.)  
May be repeated for credit.  

MAT 588: First-Year Seminar I  
Workshop on basic graduate-level mathematics skills and knowledge. Skills include reading and writing proofs, solving problems, reading mathematics. Topics cover fundamental ideas and theories such as constructions of number systems, exchange of limits, the Euclidean algorithm, and the axiom of choice.  
Fall, 3 credits, S/U grading  

MAT 589: First-Year Seminar II  
Same concept as MAT 588, but covers different materials.  
Spring, 3 credits, S/U grading  

MAT 590: Problem Seminar  
Analyze problems and explore supplementary topics related to the core courses in the Professional M.A. Option. Focus on preparation for the doctoral comprehensive examination.  
Fall and Spring, 3 credits, S/U grading  
May be repeated for credit.  

MAT 598: Teaching Practicum  
Seminar and workshop for new teaching assistants.  
Fall, 3 credits, S/U grading  

MAT 599: M.A. Research  
May be repeated for credit.  

MAT 602: Topics in Algebra  
Typical topics are drawn from group theory, ring theory, representation theory of groups and algebras, fields and commutative algebra, homological algebra.  
Prerequisite: Permission of instructor  
Fall, 3 credits, Letter graded (A, A-, B+, etc.)  
May be repeated for credit.  

MAT 603: Topics in Algebra  
Typical topics are drawn from group theory, ring theory, representation theory of groups and algebras, fields and commutative algebra, homological algebra.  
Prerequisite: Permission of instructor  
Fall, 3 credits, Letter graded (A, A-, B+, etc.)  
May be repeated for credit.  

MAT 608: Topics in Number Theory  
Typical topics are drawn from analytic number theory, algebraic number theory, diophantine equations, and transcendental number theory, with indications of methods from algebra, geometry, analysis, and logic.  
Prerequisite: Permission of instructor  
Fall, 3 credits, Letter graded (A, A-, B+, etc.)  
May be repeated for credit.  

MAT 609: Topics in Number Theory  
Typical topics are drawn from analytic number theory, algebraic number theory, diophantine equations, and transcendental number theory, with indications of methods from algebra, geometry, analysis, and logic.  
Prerequisite: Permission of instructor  
Fall, 3 credits, Letter graded (A, A-, B+, etc.)  
May be repeated for credit.  

MAT 614: Topics in Algebraic Geometry  
Typical topics are drawn from varieties and schemes, algebraic curves, and their arithmetics. Fall  
3 credits, Letter graded (A, A-, B+, etc.)
MAT 615: Topics in Algebraic Geometry
Typical topics are drawn from varieties and schemes, algebraic curves, and their arithmetics. Fall
3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MAT 620: Topics in Algebraic Topology
Topics of current interest such as foliations, surgery, singularities, group actions on manifolds, and homotopy theory.
Prerequisite: Permission of instructor
Fall, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MAT 621: Topics in Algebraic Topology
Topics of current interest such as foliations, surgery, singularities, group actions on manifolds, and homotopy theory.
Prerequisite: Permission of instructor
Fall, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MAT 626: Topics in Complex Analysis
Topics selected from Riemann surfaces, quasiconformal mappings, several complex variables, Fuchsian groups, Kleinian groups, moduli of Riemann surfaces and Kleinian groups, analytic spaces, singularities.
Prerequisite: Permission of instructor
Fall, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MAT 627: Topics in Complex Analysis
Topics selected from Riemann surfaces, quasiconformal mappings, several complex variables, Fuchsian groups, Kleinian groups, moduli of Riemann surfaces and Kleinian groups, analytic spaces, singularities.
Prerequisite: Permission of instructor
Fall, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MAT 632: Topics in Differential Equations
Typical topics are hyperbolic or elliptic systems, parabolic equations, spectral theory, finite difference equations, Cauchy-Riemann equations and complex vector fields, equations with constant coefficients, solvability of linear equations, Fourier integral operators, nonlinear equations.
Prerequisite: Permission of instructor
Fall, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MAT 633: Topics in Differential Equations
Typical topics are hyperbolic or elliptic systems, parabolic equations, spectral theory, finite difference equations, Cauchy-Riemann equations and complex vector fields, equations with constant coefficients, solvability of linear equations, Fourier integral operators, nonlinear equations.
Prerequisite: Permission of instructor
Fall, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MAT 638: Topics in Real Analysis
Topics selected from functional analysis, harmonic analysis, Banach algebras, operator theory.
Prerequisite: Permission of instructor
Fall, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MAT 641: Topics in Lie Groups Theory
Typical topics are universal enveloping algebras; free, solvable and nilpotent Lie algebras; Lie theory and formal groups; root systems; Dynkin diagrams, classification and representations of complex semisimple Lie algebras; method of orbits; representations of non-compact Lie groups; loop groups.
Prerequisite: MAT 552
Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MAT 644: Topics in Differential Geometry
Typical topics will be drawn from areas such as comparison theorems, pinching theorems, Morse theory, characteristic classes, minimal varieties, Hodge theory, spectrum of the Laplacian, and geometry of general relativity.
Prerequisite: Permission of instructor
Fall, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MAT 645: Topics in Differential Geometry
Typical topics will be drawn from areas such as comparison theorems, pinching theorems, Morse theory, characteristic classes, minimal varieties, Hodge theory, spectrum of the Laplacian, and geometry of general relativity.
Prerequisite: Permission of instructor
Fall, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MAT 648: Topics in Mathematical Physics
Typical topics are mathematical methods of classical and quantum mechanics; methods of functional integration and its applications; infinite-dimensional Lie algebras, quantum groups and representations; conformal field theories; super-symmetry; topological quantum field theories; gauge theories and geometry in four-dimensions; supergravity and mirror symmetry; strings.
Prerequisite: Permission of instructor
Fall, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MAT 649: Topics in Mathematical Physics
Typical topics are drawn from holomorphic and low-dimensional dynamics, hyperbolic dynamics, theory of Hamiltonian systems, ergodic theory, and bifurcation theory.
Prerequisite: Permission of instructor
Fall, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MAT 655: Topics in Dynamical Systems
Typical topics are drawn from holomorphic and low-dimensional dynamics, hyperbolic dynamics, theory of Hamiltonian systems, ergodic theory, and bifurcation theory.
Prerequisite: Permission of instructor
Fall, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MAT 656: Topics in Dynamical Systems
Typical topics are drawn from holomorphic and low-dimensional dynamics, hyperbolic dynamics, theory of Hamiltonian systems, ergodic theory, and bifurcation theory.
Prerequisite: Permission of instructor
Fall, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MAT 662: Advanced Topics in Algebra
Prerequisite: Permission of instructor
MAT 662 - Fall, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MAT 663: Advanced Topics in Algebra
Prerequisite: Permission of instructor
MAT 662: Advanced Topics in Algebraic Topology
Prerequisite: Permission of instructor
May be repeated for credit.

MAT 666: Advanced Topics in Algebraic Topology
Prerequisite: Permission of instructor
May be repeated for credit.

MAT 670: Advanced Topics in Complex Analysis
Prerequisite: Permission of instructor
May be repeated for credit.

MAT 671: Advanced Topics in Complex Analysis
Prerequisite: Permission of instructor
May be repeated for credit.

MAT 674: Advanced Topics in Differential Equations
Prerequisite: Permission of instructor
May be repeated for credit.

MAT 675: Advanced Topics in Differential Equations
Prerequisite: Permission of instructor
May be repeated for credit.

MAT 678: Advanced Topics in Real Analysis
Prerequisite: Permission of instructor
May be repeated for credit.

MAT 682: Advanced Topics in Differential Geometry
Prerequisite: Permission of instructor
May be repeated for credit.

MAT 683: Advanced Topics in Differential Geometry
Prerequisite: Permission of instructor
May be repeated for credit.

MAT 685: Advanced Topics in Dynamics
An advanced topic selected from holomorphic and low-dimensional dynamics, hyperbolic dynamics, KAM theory, smooth ergodic theory, geodesic flows, bifurcation theory.
Prerequisite: Permission of instructor
May be repeated for credit.

MAT 686: Advanced Topics in Dynamics
An advanced topic selected from holomorphic and low-dimensional dynamics, hyperbolic dynamics, KAM theory, smooth ergodic theory, geodesic flows, bifurcation theory.
Prerequisite: Permission of instructor
May be repeated for credit.

MAT 690: RTG Seminar in Mathematics and Physics I
Intensive learning seminar aimed at first and second year graduate students. The main purpose is to introduce mathematics students to the methods, language and modes of thought in modern physics, and conversely to introduce physics students to the same things in modern mathematics. Student participation is required. Specific topics will change from year to year.
1-6 credits, S/U grading

MAT 691: RTG Seminar in Mathematics and Physics II
Intensive learning seminar aimed at first and second year graduate students. The main purpose is to introduce mathematics students to the methods, language and modes of thought in modern physics, and conversely to introduce physics students to the same things in modern mathematics. Student participation is required. Specific topics will change from year to year.
1-6 credits, S/U grading

MAT 696: Mathematics Seminar
May be repeated for credit.

MAT 697: Mathematics Colloquium
May be repeated for credit.

MAT 698: Independent Study
May be repeated for credit.

MAT 699: Dissertation Research on Campus
Dissertation research under direction of advisor. Prerequisite: Advancement to candidacy (G5). Major portion of research must take place on SBU campus, at Cold Spring Harbor, or at the Brookhaven National Lab.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

MAT 700: Dissertation Research off Campus - Domestic
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place off-campus, but in the United States and/or U.S. provinces. Please note, Brookhaven National Labs and the Cold Spring Harbor Lab are considered on-campus. All international students must enroll in one of the graduate student insurance plans and should be advised by an International Advisor.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

MAT 701: Dissertation Research off Campus - International
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place outside of the United States and/or U.S. provinces. Domestic students have the option of the health plan and may also enroll in MEDEX. International students who are in their home country are not covered by mandatory health plan and must contact the Insurance Office for the insurance charge to be removed. International students who are not in their home country are charged for the mandatory health insurance. If they are to be covered by another insurance plan they must file a waiver for second week of classes. The charge will only be removed if other plan is deemed comparable.
All international students must receive clearance from an International Advisor.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

MAT 800: FULL TIME SUMMER RES
May be repeated for credit.

MBA

Business Administration
MBA 509: Continuous Quality Improvement
This course provides students with understanding of concepts of TQM and quality improvement methods to attain world-class performance in business operations. Topics include policy deployment, process improvement methodology, daily work management, quality story methodology, six sigma, poka-yoke, ISO, Deming and Baldrige Awards criteria.
3 credits, Letter graded (A, A-, B+, etc.)

MBA 523: Human Resource Management Workshop
This course is designed for human resources practitioners who wish to prepare themselves for higher level executive positions: planning for the personnel function relative to organizational purpose and size of workforce; developing recruiting plans, job classifications, and wage schedules; establishing benefit systems; and training supervisors, systematizing employee supervision, and evaluation methods. Finally, the class will develop such motivational incentives as career development, job enrichment, and employee assistance programs and learn how to devise model affirmative action and employee safety procedures. This course is offered as both CES 515 and MBA 532.
3 credits, Letter graded (A, A-, B+, etc.)

MBA 528: Risk Management
The course focuses on the wide range of risks faced by law firms, partners and managers. Each session will examine various risk categories, teaching participants how to define and quantify risk.
3 credits, Letter graded (A, A-, B+, etc.)

MBA 530: Employee Dispute Resolution and Conflict Management
The methods and procedures for reaching negotiated agreements. Topics include reducing conflict and confrontation between contending parties, analysis of the techniques of win-lose and win-win negotiation, and mediation. Students are expected to participate in a series of workshop activities and simulated cases to reveal how negotiation and mediation are applied to resolving difficulties in business management, labor relations, international and domestic affairs, patient/doctor/hospital relations, and other areas where negotiation and mediation play a significant role in modern life. This course is also offered as CES 547.
3 credits, Letter graded (A, A-, B+, etc.)

May be repeated for credit.

MBA 532: Foundations of Human Resource Management
This is the mandated course in the human resource sector of the Human Resource Management curriculum. The course explores the basic elements of personnel administration: an overview of human resource functions; recruitment, selection, and placement; job classification and wage and benefit systems; employee supervision, counseling, discipline, and grievance; the legal framework of human resource administration; and approaches specific to union and nonunion environments. This course is offered as both CES 515 and MBA 532.
3 credits, Letter graded (A, A-, B+, etc.)

MBA 537: Training and Development
This course provides an overview of employee training methods, training design, development programs, and evaluation procedures, including cost/benefit analysis. Emphasis is placed on how to perform a needs analysis, how to select the latest training technologies, and how to apply these technologies to maximize adult learning. In addition, development strategies are reviewed for instance, when to train generalist managers and specialists, how to foster an atmosphere conducive to continuous learning, and how to reward supervisors for supporting their subordinates' development. Students apply these concepts to a specific organization for hands-on learning. In addition, a focus on career planning and development gives students a chance to take interest inventories and self-assessments of abilities and learning style. Students formulate their own career plans and develop action strategies. This course is offered as both MBA 537 and CEX 537.
3 credits, Letter graded (A, A-, B+, etc.)

MBA 547: Fundamentals of Fixed Income Analysis
A concrete understanding of the fundamentals of fixed income security analysis. Study of the basics of bond analysis, such as the relationship between the price and yield of a bond, the sensitivity of a bond's price to changes in yield, and measuring the total return on a bond. We will analyze the determinants of interest rates and how different market participants interact. Trading strategies, evaluate their risk, and perform ex-post analyses will be discussed.
3 credits, Letter graded (A, A-, B+, etc.)

MBA 548: Fundamentals of the Bioscience Industry
A 4-module course set up to provide students with a comprehensive introduction to the complexities of the bioscience business environment.

Prerequisite: Must be either a BME or MBA graduate student (West Campus). All other students must obtain permission from the instructor.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

MBA 553: Simulation and Modeling
A comprehensive course in formulation, implementation, and application of simulation models. Topics include data structures, simulation languages, statistical analysis, pseudo-random number generation, and design of simulation experiments. Students apply simulation modeling methods to problems of their own design. This course is offered as CSE 529, AMS 533 and MBA 553.
3 credits, Letter graded (A, A-, B+, etc.)

MBA 571: Social Entrepreneurship
Students explore the concept of social entrepreneurship including motivation and skills for advocacy, entrepreneurship, and leadership. Topics include forms of social entrepreneurship (private, public, and not-for-profit), venture capital and fund raising, market analysis, marketing, communications, human resources and human relations, including negotiation and conflict resolution methods. Students will explore models of corporate social responsibility, university service to the community, and grass-roots ventures spawned by perceived need and the will to make a difference. Students work in teams to develop a strategic business plan for their own venture and present their proposals to the class.

Offered
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

MBA 589: Operations Management
A managerial approach to the concepts, issues and techniques used to convert an organization's resources into products and services. Topics include strategic decisions for planning products, processes, and technologies, operating decisions for planning production to meet demand, and controlling decisions for planning and controlling operations through teamwork and Total Quality Management (TQM). Operational problems in producing goods and services are reviewed. This course is offered as both MBA 589 and EMP 506.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)
Molecular and Cellular Biology

MCB 500: Directed Readings in Molecular and Cellular Biology
Directed readings in topics of current interest, under supervision of a faculty sponsor. Prerequisite: matriculation in graduate program or permission of instructor.
Fall and Spring, 1-3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MCB 503: Molecular Genetics
Introduces the classical work and current developments in lower and higher genetic systems. Covers gene structure and regulation in prokaryotic and eukaryotic organisms, mutational analysis and mapping, transposable elements, and biological DNA transfer mechanisms. Bacteriophage as well as lower and higher eukaryotic systems are used to illustrate aspects of molecular genetic structure and function. This course is offered as both MCB 503 and HBM 503.
Prerequisite: Matriculation in Graduate Program or permission of instructor.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

MCB 509: Experimental Molecular & Cellular Biology
An introduction to modern biochemical research techniques. The student spends a half term in the laboratory of each of four different members of the staff selected in consultation with the course director. In each laboratory the student participates in some aspect of the ongoing research pursued by the faculty member. Prerequisite: matriculation in graduate program or permission of instructor.
Fall, 1-4 credits, Letter graded (A, A-, B+, etc.)

MCB 510: Experimental Molecular & Cellular Biology
An introduction to modern biochemical research techniques. The student spends a half term in the laboratory of each of four different members of the staff selected in consultation with the course director. In each laboratory the student participates in some aspect of the ongoing research pursued by the faculty member. Prerequisite: matriculation in graduate program or permission of instructor.
Spring, 1-4 credits, Letter graded (A, A-, B+, etc.)

MCB 512: Structural Biology and Spectroscopy
Theoretical principles and experimental methods used in the study of proteins and nucleic acids, e.g., spectroscopy, magnetic resonance and diffraction.
Prerequisites: MCB 520, or undergraduate physical chemistry course, plus matriculation in graduate program or permission of instructor.
Fall, 2 credits, Letter graded (A, A-, B+, etc.)

MCB 517: Biomembranes
Examines the molecular architecture of membranes; the structure, organization, functions, and assembly of lipids and proteins in biological membranes. This course is also offered as BSB 517.
Prerequisite: Matriculation in Graduate Program or permission of instructor.
Fall, 1 credit, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MCB 520: Graduate Biochemistry I
Several topics in modern biochemistry are treated at an advanced level. Topics covered will include protein structure, enzyme kinetics and mechanisms, and enzyme regulation.
Prerequisite: undergraduate biochemistry course, matriculation in graduate program or permission of instructor.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

MCB 531: Graduate Seminar in Molecular & Cellular Biology
Seminars are given by graduate students on current literature in the fields of biochemistry, molecular biology, cell biology or developmental biology. Prerequisite: matriculation in graduate program or permission of instructor.
1 credit, Letter graded (A, A-, B+, etc.)

MCB 532: Graduate Seminar in Molecular & Cellular Biology
Seminars are given by graduate students on current literature in the fields of biochemistry, molecular biology, cell biology or developmental biology. Prerequisite: matriculation in graduate program or permission of instructor.
Spring, 1 credit, Letter graded (A, A-, B+, etc.)

MCB 550: Entering Mentoring
This seminar series is designed for graduate students and postdoctoral researchers of biology who may become science faculty. The goal is to help them become effective mentors through discussions, collective experiences, and novel strategies to improve mentoring skills. This course is comprised of eight one-hour sessions in which topics related to the role and responsibilities of a mentor are discussed. Topics touch on ethical, intellectual, personal, and interpersonal issues that are associated with effective mentoring.
1 credit, S/U grading

MCB 599: Dissertation Research
Original investigation under the supervision of a member of the staff. Prerequisite: matriculation in graduate program or permission of instructor.
Fall and Spring, 1-12 credits, S/U grading
May be repeated for credit.

MCB 601: Colloquium in Molecular and Cellular Biology
A weekly series of talks and discussions by visiting scientists covering current research and thinking in various aspects of molecular and cellular biology. Required for all MCB graduate students. Attendance is mandatory. Visitors welcome. Prerequisite: matriculation in graduate program or permission of instructor.
Fall, 1 credit, S/U grading

MCB 602: Colloquium in Molecular and Cellular Biology
A weekly series of talks and discussions by visiting scientists covering current research and thinking in various aspects of molecular and cellular biology. Required for all MCB graduate students. Attendance is mandatory. Visitors welcome. Prerequisite: matriculation in graduate program or permission of instructor.
Spring, 1 credit, S/U grading

MCB 603: Student Seminar in Molecular and Cellular Biology
Seminars given by graduate students on the progress of their own thesis research. Required of all students every term in which they are registered in Graduate Studies in Molecular Biology and Biochemistry. Attendance is mandatory. Visitors welcome. Prerequisite: matriculation in graduate program or permission of instructor.
Fall, 1 credit, S/U grading
May be repeated 2 times FOR credit.

MCB 604: Student Seminar in Molecular and Cellular Biology
Seminars given by graduate students on the progress of their own thesis research. Required of all students every term in which they are registered in Graduate Studies in Molecular Biology and Biochemistry. Attendance is mandatory. Visitors welcome. Prerequisite: matriculation in graduate program or permission of instructor.
Fall, 1 credit, S/U grading
May be repeated 2 times FOR credit.

**MCB 656: Cell Biology**
Introduction to the structural and functional organization of cells and tissues and to the way structure relates to function. Particular emphasis is placed on nuclear and chromosomal structure, signal transduction, protein translocation, the cytoskeleton and the extracellular matrix. The interaction of cellular structures and components and their regulation is stressed as is the organization and interaction of cells in tissues. The course is comparative and includes examples of cells and tissues from vertebrates, invertebrates, plants, and prokaryotic systems. Prerequisite: matriculation in graduate program or permission of instructor.

*Spring, 4 credits, Letter graded (A, A-, B+, etc.)*

**MCB 657: Principles of Development**
This course deals with developing systems at all levels from the morphological to the molecular. Illustrative material from both animal and plant kingdoms is used. Special attention is given to gametogenesis, genetic control of early development, transcriptional and translational control of protein synthesis, the role of cell division and cell movements, and cell-to-cell interactions in defining developing systems.

Prerequisite: MCB 656, matriculation in graduate program or permission of instructor.

*Fall, 3 credits, Letter graded (A, A-, B+, etc.)*

**MCB 699: Dissertation Research on Campus**
Prerequisite: Must be advanced to candidacy (G5). Major portion of research must take place on SBU campus. Prerequisite: matriculation in graduate program or permission of instructor.

Fall, 1-9 credits, S/U grading

**MCB 700: Dissertation Research off Campus - Domestic**
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place off-campus, but in the United States and/or U.S. provinces. Please note, Brookhaven National Labs and the Cold Spring Harbor Lab are considered on-campus.

All international students must enroll in one of the graduate student insurance plans and should be advised by an International Advisor.

Fall, 1-9 credits, S/U grading

**MCB 701: Dissertation Research off Campus - International**
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place outside of the United States and/or U.S. provinces. Domestic students have the option of the health plan and may also enroll in MEDEX. International students who are in their home country are not covered by mandatory health plan and must contact the Insurance Office for the insurance charge to be removed. International students who are not in their home country are charged for the mandatory health insurance. If they are to be covered by another insurance plan they must file a waiver by second week of classes. The charge will only be removed if other plan is deemed comparable.

All international students must receive clearance from an International Advisor.

Fall, 1-9 credits, S/U grading

**MCB 800: Summer Research**
Prerequisite: matriculation in graduate program or permission of instructor.

S/U grading

May be repeated for credit.

**MEC**

**Mechanical Engineering**

**MEC 500: Introduction to Computer Integrated Design and Manufacturing**
Topics include part design specification; Computer Aided Design (CAD); CAD-driven engineering analysis; Computer Aided Manufacturing (CAM); integration of CAD/CAM; computer integrated manufactur-ing industrial robotics; CAD-driven inspection and measurement; concurrent engineering; Internet-based design and manufacturing. Prerequisite: B.S. in engineering

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**MEC 501: Convective Heat Transfer and Heat Exchange**
Differential and integral formulation. Exact and approximate solutions. Topics include parallel and boundary layer flows, similarity solutions, external and internal flows, laminar and turbulent convection, and forced and free convection.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

**MEC 502: Conduction and Radiation Heat Transfer**
Heat conduction and conservation laws; formulation of conduction equations in differential and integral forms; analytical solution techniques including Laplace transforms and separation of variables; scaling analysis; black body radiation; Kirchhoff's law; analysis of heat conduction problems; analysis of radiative exchange between surfaces and radiative transport through absorbing, emitting, and scattering media.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**MEC 504: Thermal Analysis and Design of Electronic Systems**
Thermal characteristics of electronic components and systems, reliability considerations, design concepts, basic modes of heat transfer and fluid flow. Topics of applied heat transfer: heat exchanger, boiling and condensation, cooling techniques, cooling at various packaging levels, thermal elastic effects, computations for electronic systems.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**MEC 505: Modeling and Simulation for Materials Processing and Manufacturing**
Importance of modeling and simulation; interface between computer models and actual processes; microscopic versus macroscopic models; continuum models; thermo-fluid models, chemical transport, magnetic and electrical effects, and stress field; simulation schemes: finite difference versus finite element methods; software development; postprocessing: graphical representation, video animation; case studies; melting/solidification bulk crystal growth; thin film deposition.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

**MEC 506: Energy Management in Commercial Buildings**
Topics include basic heating, ventilating, and air-conditioning (HVAC) system design and selection for commercial buildings (includes both low-rise and high-rise buildings); selection of central plant components and equipment; calculation of space heating and cooling load; computer techniques for estimating annual energy consumption; design tools for reducing energy consumption; ASHRAE codes; building controls; BACnet. Prerequisite: B.S. in mechanical engineering or related fields

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**MEC 507: Mathematical Methods in Engineering Analysis I**
An introduction to the use of mathematical analysis techniques for the solution of
engineering analysis problems and the simulation of engineering systems. Both continuous and discrete methods are covered. Initial and boundary value problems for ordinary and partial differential equations are treated.

**Fall, 3 credits, Letter graded (A, A-, B+, etc.)**

**MEC 508: Mathematical Methods in Engineering Analysis II**

A continuation of the material covered in MEC 507. Introduction to and application of numerical analysis techniques used in engineering such as finite elements and fast Fourier transforms. Determination of response characteristics of dynamic systems. Combinatoric methods and techniques for optimization of engineering design and systems/process analysis problems.

Prerequisite: MEC 507

**Spring, 3 credits, Letter graded (A, A-, B+, etc.)**

**MEC 509: Transport Phenomena**

Introduction to differential and integral formulation of mass, momentum, and energy transport in fluids and solids. Topics include viscosity, laminar flow, turbulent flows, conduction, convection, heat transfer coefficients, radiation, boundary layers, diffusion, and applications to energy technology.

Offered

**Fall, 3 credits, Letter graded (A, A-, B+, etc.)**

**MEC 510: Object-Oriented Programming for Scientists and Engineers**

Practical introduction to C++ and object-oriented programming for a first programming course for scientists and engineers. Covers basics of application software development such as problem decomposition, structure charts, object modeling, class diagrams, incremental code building, and testing at a beginner's level. Features the concepts of abstract data types (ADT), encapsulation, inheritance, composition, polymorphism, operator and function overloading besides studying UML (Unified Modeling Language) as a graphical representational design technique. The course follows the evolution of programming ideas from the use of a single function to the use of structural charts and functions to modularize and finally to the use of object-oriented programming.

Prerequisite: B.S. in science or engineering

**Spring, 3 credits, Letter graded (A, A-, B+, etc.)**

**MEC 511: Mechanics of Perfect Fluids**

Lagrangian and Eulerian frames. Dynamical equations of momentum and energy transfer. Two-dimensional dynamics of incompressible and barotropic perfect fluids and of the compressible perfect gas. Conformal mapping applied to two-dimensional fluid dynamics. Jets and cavities. Surface waves, internal waves. Perfect shear flows.

**Spring, 3 credits, Letter graded (A, A-, B+, etc.)**

**MEC 512: Mechanics of Viscous Fluids**

The role of viscosity in the dynamics of fluid flow. The Navier-Stokes equations, low Reynolds number behavior including lubrication theory, percolation through porous media, and flow due to moving bodies. High Reynolds number behavior including steady, unsteady, and detached boundary layers, jets, free shear layers, and wakes. Phenomenological theories of turbulent shear flows are introduced.

**Fall, 3 credits, Letter graded (A, A-, B+, etc.)**

**MEC 514: Advanced Fluid Mechanics: Introduction to Turbulence**

Introductory concepts and statistical descriptions: kinematics of random velocity fields; equations of motion; experimental techniques: isotropic turbulence, closure problem; transport processes.

Prerequisite: MEC 512

**Spring, 3 credits, Letter graded (A, A-, B+, etc.)**

**MEC 515: Emerging Energy Technologies**

Basic physics, chemistry, and engineering of emerging energy technologies, including fuel cells, thermo-electrics, photovoltaics, batteries, hydrogen generation and storage, power electronics, and ‘smart’ grid. Lecture, group reports, and presentation skills will be practiced and evaluated.

Offered in

**Spring, 3 credits, Letter graded (A, A-, B+, etc.)**

**MEC 516: Energy Technologies Laboratory**

Experiments in the areas of thermoelectric power, fuel cells, photovoltaics, wind turbines, hydrogen storage, hydrogen generation, and power electronics in addition to related project work. The focus is on systems efficiencies, system integration, and design for residential markets. Student groups are assigned laboratory projects to build experience applying various energy technologies to solve problems.

Offered in

**Spring, 3 credits, Letter graded (A, A-, B+, etc.)**

**MEC 520: Energy Technology Thermodynamics**

Following a review of engineering thermodynamics principles, the thermodynamics of power generation, heat pumps, electro-chemical systems, chemical reactions and combustion are explored in the context of sustainable energy development lecture, group reports, and presentation skills will be practiced and evaluated.

Offered

**Fall, 3 credits, Letter graded (A, A-, B+, etc.)**

**MEC 521: Thermodynamics**

This course begins with a review of the fundamental concepts and laws of classical thermodynamics. Then the thermostatic theory of equilibrium states and phase transitions is treated, followed by the thermodynamic theory of processes of simple systems and composite systems, including heat engines. Special topics may include isostatisical thermodynamics, irreversible thermodynamics, radiation and photovoltaic energy conversion, biological thermodynamic processes, and other topics of current interest.

**Spring, 3 credits, Letter graded (A, A-, B+, etc.)**

**MEC 522: Building Energy Dynamics and Technology**

Building is treated as a time-dependent energy system, with its interactive components coupled through energy and mass flows under an environment defined in terms of sunlight, ambient air and wind and with its equipment which assist in meeting building-dwellers comfort requirements. Major components discussed are thermal mass (both interior mass and envelope mass) and their thermal capacities, building envelopes and their heat transfer resistances, room air including its circulation and heat exchange with thermal mass, and the transparent part of the envelope the glazing or windows and the solar system.
passing through it during the day and the heat loss during the night time. Major equipment include lighting, air circulation system, cooling and heating equipment, solar thermal panels and solar PV panels, and other equipment including integrated electric and control units. Of the comfort requirements only temperature- and humidity and illumination are studied with the objective of creating, through a system-understanding of the building, buildings that in the short run meet these requirements involving minimal use of energy and in the long run are benchmarked against the environmentally regenerative capabilities of wilderness.

Offered in Spring, 3 credits, Letter graded (A, A-, B+, etc.)

MEC 523: Internal Combustion Engines

3 credits, Letter graded (A, A-, B+, etc.)

MEC 524: Computational Methods for Fluid Mechanics and Heat Transfer
Introduction of finite difference, finite volume, and finite element methods for incompressible flows and heat transfer. Topics include explicit and implicit schemes, accuracy, stability and convergence, derived and primitive-variables formulation, orthogonal and non-orthogonal coordinate systems. Selected computer assignments from heat conduction, incompressible flows, forced and free convection.

Prerequisite: MEC 507
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

MEC 525: Product Design Concept Development and Optimization
This graduate course will concentrate on the design concept development of the product development cycle, from the creative phase of solution development to preliminary concept evaluation and selection. The course will then cover methods for mathematical modeling, computer simulation and optimization. The concept development component of the course will also cover intellectual property and patent issues. The course will not concentrate on the development of any particular class of products, but the focus will be mainly on mechanical and electromechanical devices and systems. As part of the course, each participant will select an appropriate project to practice the application of the material covered in the course and prepare a final report.

Prerequisites: Undergraduate electrical or mechanical engineering and/or science training.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

MEC 526: Energy Technology Fundamentals
A practical introduction to insulation, heat pumps, lighting, solar panels, fuel cells, wind energy, transportation, and building energy codes. How they work, new products, and cost/benefit analysis are used to investigate how homeowners and small businesses can use the technologies to 'generate' income and improve their quality of life. This course is geared for non-MEC majors. MEC majors interested in these topics may take MEC 515 and MEC 520. MEC 523 cannot be used for MEC degree credit.

Offered Fall, Spring, 3 credits, Letter graded (A, A-, B+, etc.)

MEC 528: Introduction to Experimental Stress Analysis
The concepts of three-dimensional stress and strain, their transformation laws, and their mutual relationships are discussed in detail. Results from theory of elasticity as pertinent to experimental stress analysis are also presented. Experimental techniques studied include two-dimensional photoelasticity, resistance strain gauge, moire methods, holographic interferometry and speckle photography. The application of different techniques to the measurement of stress and strain in models as well as actual structures is demonstrated. Students form small groups and each group is assigned different laboratory projects to gain experience in various experimental stress analysis methods.

3 credits, Letter graded (A, A-, B+, etc.)

MEC 529: Introduction to Robotics: Theory and Applications
Topics: robot components and mechanatronic aspects of robotics (sensors, actuators, and effectors, system integration); rotation, translation, rigid-body transform; robotics foundations in kinematics and inverse kinematics, dynamics, serial and parallel manipulators and their duality, introduction to mobile robots and LEGO Robotics, control theories, motion planning, trajectory generation, grasping and manipulation, robotic programming language, industrial robotics, manufacturing automation, and societal impacts. Include hands-on projects.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

MEC 530: Applied Stress Analysis
Advanced mechanics of solids and structures. Elastic boundary value problems are analyzed with various solution techniques including finite element method. Major topics are stress and strain, FEM formulations, material properties, 2D elastic problems, stress function and fracture. Detailed studies of structural components are carried out with emphasis on optimal mesh design and proper interpretations of computed results.

3 credits, Letter graded (A, A-, B+, etc.)

MEC 532: Vibration and Control
Fundamentals of vibrations and control of vibrations of structures and dynamic systems. Topics include one dof systems and responses, multiple dof systems and responses, classical feedback control theory, modern state-space feedback control theory, application of control methodology in structure and systems under vibration and dynamics; introduction of optimal control theory; feedback control; distributed transducers for active control of vibration.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

MEC 535: Engineering Stress Analysis
Provides and overview of stress analysis for practicing engineers and scientists.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

MEC 536: Mechanics of Solids
A unified introduction to the fundamental principles, equations, and notation used in finite deformation of solids, with emphasis on the physical aspects of the subject. Cartesian tensor representation of stress, principal values, finite strain, and deformation. Conservation of mass, momentum, and energy. Formulation of stress-strain relations in elasticity, and compatibility relations. The use of general orthogonal coordinate systems in the equations governing solids. Principles of virtual displacement and virtual work.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

MEC 539: Introduction to Finite Element Methods
(formerly Finite Element Methods in Structural Analyses)

Theory of finite element methods and their application to structural analysis problems. Matrix operations, force and displacement...
MEC 540: Mechanics of Engineering Structures
An introduction to variational principles of mechanics and the development of approximation methods for the solution of structural mechanics problems. Linear and nonlinear theories of beams and thin plates are developed along with their framework for numerical solutions. An introduction of the general theory of structural stability is presented along with its application to the buckling and initial postbuckling behavior of beams and plates.  
3 credits, Letter graded (A, A-, B+, etc.)

MEC 541: Elasticity
Prerequisite: MEC 536  
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

MEC 543: Plasticity
Stress and deformation of solids: yield criteria and flow rules for plasticity deforming solids; the notion of a stable inelastic material; static and dynamic analysis of plastic bodies under mechanical and thermal loading; use of load bounding theorems and the calculation of collapse loads of structures; the theory of the slip-line field.  
Prerequisite: MEC 541  
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

MEC 550: Mechatronics
An introduction to the design, modeling, analysis and control of mechatronic systems (smart systems comprising mechanical, electrical, and software components). Fundamentals of the basic components needed for the design and control of mechatronic systems, including sensors, actuators, data acquisition systems, microprocessors, programmable logic controllers, and I/O systems, are covered. Hands-on experience in designing and building practical mechatronic systems are provided through integrated lab activities.  
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

MEC 552: Mechanics of Composite Materials
The course is concerned with the analysis of layered composite materials subject to mechanical loads. Cartesian tensor calculus is used. Homogeneous anisotropic media are studied first. The effect of layering is then analyzed. Applications to plates and shell are studied and analytical methods of solution are given. Numerical analysis of composite solids is also considered using finite difference and finite element methods.  
Prerequisite: MEC 536  
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

MEC 560: Advanced Control Systems
Analytical methods applied to the design of multivariable linear control systems. Introduction to linear system theory: linearization, solution of linear matrix differential equations, stability, controllability, observability, transformations to canonical forms. Formulation of control objectives. Deterministic state observer. Full-state feedback control based on pole assignment and linear quadratic optimization theory. Linear systems with stochastic inputs and measurement noise. The response of linear systems to random input; stochastic state estimator (Kalman filter); separation principle of stochastic control and estimation; system robustness.  
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

MEC 567: Kinematic Analysis and Synthesis of Mechanisms
Introduction, mechanism structure, basic concepts of mechanisms, canonical representation of motion. Kinematic analysis, algebraic method, vector-loop method, complex number method, spherical and spatial polygon method, matrix method, dual-number quaternion method, screw coordinate method, line coordinate method, motor algebra method, type synthesis, number synthesis, coupler curves, curvature theory path generation, finite displacement theory, rigid body guidance, function generation, computer-aided mechanisms analysis and synthesis.  
Prerequisite: Permission of instructor  
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

MEC 568: Advanced Dynamics
Newtonian and Lagrangian mechanics of rigid bodies; kinematics, inertia tensor, principle of momentum, principle of virtual work, potential and kinetic energy, equations of motion, extraction of information from the equations of motion, and application to engineering problems.  
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

MEC 570: Introduction to Engineering Tribology
Focus is on the fundamentals of tribology, the science of surfaces in relative motion, with an introduction to friction, lubrication, and wear. The basics of tribology science: engineering surfaces, contact mechanics, lubrication theory, wear processes and modeling, wear properties of materials, and tribology test methods will be covered. Analysis of tribological aspects of machine components and bearings. Industrial case studies will be presented to place the topics in context to industry and society.  
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

MEC 571: Analysis and Design of Robotic Manipulators
Introduction to robot manipulators from the mechanical viewpoint, emphasizing fundamentals of various mechanisms and design considerations. Kinematics on 2D and 3D manipulators; statics and dynamics; motion planning; control fundamentals; algorithms development; computer-graphics simulation of manipulators; current applications.  
Prerequisite: Permission of instructor  
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

MEC 572: Geometric Modeling for CAD, CAM
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

MEC 575: Introduction to Micro Electro-Mechanical Systems (MEMS)
An introduction to the fundamental knowledge and experience in the design and manufacture of microsystems. Emphasis will be placed on the methodologies for design, fabrication, and packaging of microsystems. An overview on fabrication and manufacturing technologies for producing microsystems will also be covered. Interdisciplinary nature of MEMS will be emphasized via various engineering principles ranging from mechanical and electrical to materials and chemical engineering. Introduction of the working principles of micro actuators, sensors, and transducers.

Prerequisite: Permission of instructor
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

MEC 576: Microfluidics and Microscale Heat Transfer

Topics: flow/control of liquids/gases at small length scales; deviation from classical fluid behavior; boundary conditions/scaling laws at small scales; microscopic flow of heat at small length- and time-scales; application to MEMS devices, heat transfer in microelectronics devices, ultra-fast laser processing.

Prerequisite: B.S. in engineering or department approval
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

MEC 578: Reliability and Life Prediction of Electromechanical Systems

The modes of failure and the factors that play a role in the failure of mechanical components are presented. Failure modes and failure theories for brittle and ductile materials are introduced; special emphasis will be placed on the fatigue and fracture of materials. Distinctions will be drawn between the behavior of single crystal versus polycrystalline materials, and versus ductile and brittle materials. Reliability issues will be discussed regarding the design of series versus parallel systems.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

MEC 579: Optical Measurement

Introduction to optical measurement and its applications to the fields of solid mechanics, design and manufacturing, and thermal and fluid systems. Topics include fundamentals of optics, lasers, and detectors, dimensional and surface metrology, machine vision, measurement of temperature, concentration, and density, and optical techniques for stress analysis and nondestructive testing.

3 credits, Letter graded (A, A-, B+, etc.)

MEC 580: Manufacturing Processes

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

MEC 584: Quality Engineering

MEC 585: Total Quality Management

Concepts of TQM and quality improvement methods to attain world-class performance in business operations. Topics include policy deployment, process improvement methodology, daily work management, quality story methodology, six sigma, poka-yoke, ISO, Deming and Baldrige Awards criteria.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

MEC 591: Industrial Project in Opto Electro Mechanical Systems Engineering

A student carries out a detailed design of an industrial project in OMEMS engineering. A comprehensive technical report of the project and an oral presentation are required.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

MEC 596: Projects in Mechanical Engineering

Conducted jointly by graduate students and one or more members of the faculty.

1-6 credits, Letter graded (A, A-, B+, etc.)
May be repeated 1 times FOR credit.

MEC 597: Graduate Research and Study in Manufacturing

Independent research or project in the area of manufacturing processes or systems.

1-6 credits, Letter graded (A, A-, B+, etc.)

MEC 599: Research

Fall, 1-12 credits, S/U grading
May be repeated for credit.

MEC 630: Special Topics in Fluid Mechanics

The subject matter of each special topics course varies from semester to semester, depending on the interests of students and staff. Advanced topics and specialized topics will be discussed, particularly those of current interest.

3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.
MEC 636: Advanced Topics in Mechanical Vibration
The subject matter of each special topics course varies from semester to semester, depending on the interests of students and staff. Advanced topics and specialized topics will be discussed, particularly those of current interest.
3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MEC 637: Special Topics in Precision Engineering
The subject matter of each special topics course varies from semester to semester, depending on the interests of students and staff. Advanced topics and specialized topics will be discussed, particularly those of current interest.
3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MEC 641: Fracture Mechanics
The mechanics of brittle and ductile fracture in engineering materials are studied. Major subjects are linear elastic fracture, elastic-plastic fracture, and fatigue crack analysis. Topics also include stress intensity factor, energy release rate, J-integ.
Prerequisite: MEC 536,
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

MEC 651: Advanced Finite Element Analysis
Prerequisites: MEC 541, MEC 539
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

MEC 662: Advanced Vibration and Analysis
Principle and techniques of vibration analysis of structures and machines. Includes free and forced vibration responses of linear and non-linear parameter, multiple dof systems; model analysis of distributed, continuous systems; non-linear vibration analysis; random vibrations.
3 credits, Letter graded (A, A-, B+, etc.)

MEC 671: Optical Methods for Experimental Stress Analysis
Theory and applications of moire methods (in-plane, shadow, reflection, projection, and refraction moire techniques) for measuring static and dynamic deformation of 2D and 3D models, bending of plates and shells, and temperature distribution or refraction index change in fluids. Other topics: holographic interferometry, laser speckle interferometry, digital speckle photography, and current research activities of the field.
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

MEC 691: Mechanical Engineering Seminar
This course is designed to expose students to cutting-edge research and development activities in mechanical engineering. Speakers are invited from both on and off campus. Fall and spring. 0 credits, S/U grading. May be repeated.
S/U grading
May be repeated for credit.

MEC 695: Mechanical Engineering Practicum
Participation in off-campus engineering practice in private corporations, public agencies, or non-profit institutions. Students will be required to have faculty coordinator as well as a contact in outside organization, to participate with them in regular consultations on the project, and to submit a final report to both. A maximum of 3 credits can be accepted toward the M.S. degree.
Fall, 1 credit, S/U grading
May be repeated 3 times FOR credit.

MEC 696: Special Problems in Mechanical Engineering
Conducted jointly by graduate students and one or more members of the faculty.
1-6 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MEC 697: Practicum in Teaching I
Every TA must register for the course
Fall, S/U grading
May be repeated for credit.

MEC 698: Practicum in Teaching II
Practicum in teaching under faculty supervision
1-3 credits, S/U grading
May be repeated for credit.

MEC 699: Dissertation Research on Campus
Prerequisite: Advancement to candidacy (G5).
Major portion of research must take place on SBU campus, at Cold Spring Harbor, or at the Brookhaven National Lab.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

MEC 700: Dissertation Research off Campus - Domestic
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place off-campus, but in the United States and/or U.S. provinces. Please note, Brookhaven National Labs and the Cold Spring Harbor Lab are considered on-campus. All international students must enroll in one of the graduate student insurance plans and should be advised by an International Advisor.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

MEC 701: Dissertation Research off Campus - International
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place outside of the United States and/or U.S. provinces. Domestic students have the option of the health plan and may also enroll in MEDEX. International students who are in their home country are not covered by mandatory health plan and must contact the Insurance Office for the insurance charge to be removed. International students who are not in their home country are charged for the mandatory health insurance. If they are to be covered by another insurance plan they must file a waiver be second week of classes. The charge will only be removed if other plan is deemed comparable.
All international students must received clearance from an International Advisor.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

MGT 800: Full Time Summer Research
May be repeated for credit.

MGT
Harriman School

MGT 509: Continuous Quality Improvement
This course provides students with understanding of concepts of TQM and quality improvement methods to attain world-class performance in business operations. Topics include policy deployment, process improvement methodology, daily work management, quality story methodology, six sigma, poka-yoke, ISO, Deming and Baldridge
Awards criteria. Crosslisted with MEC 585, CEX 523.

3 credits, Letter graded (A, A-, B+, etc.)

**MGT 515: Statistics for Managers**

An introduction to statistical techniques useful in the analysis of management problems. We motivate each topic by managerial applications, and we analyze actual data sets using modern statistical software. Topics include probability, estimation, hypothesis testing, and regression analysis.

3 credits, Letter graded (A, A-, B+, etc.)

**MGT 532: Finance**

How firms meet and manage their financial objectives. Today's financial environment, the fundamental trade-off between risk and return, the time value of money, and valuing future cash flows are discussed. Financial tools and techniques, which can be used to help firms maximize value by improving decisions relating to capital, are explained. Bond and stock valuations are introduced.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

**MGT 533: Management Economics**

The techniques and approaches of microeconomic reasoning are applied to issues of management and policy. The theory of the market and the price system are closely examined to identify areas where neoclassical economics is helpful to the analyst and manager. Decisions regarding firm boundaries, competition, pricing, and entry are examined. Extensive use is made of case studies.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**MGT 535: Financial Accounting**

Introduction and exploration of basic financial accounting terminology, principles, concepts, and their relevant business applications. This course will include the recording, summarization, and adjustment of financial transactions and the preparation and presentation of the basic financial statements. Other topics will include valuation methods for cash, accounts receivable, inventory and property, plant and equipment. This course is also offered as EMP 502.

3 credits, Letter graded (A, A-, B+, etc.)

**MGT 541: Workshop in Management**

Under faculty supervision, groups of students work for clients on management issues in a variety of areas such as health care, MIS, marketing, data analysis, business plans, and the like. The course provides students with an opportunity to apply the analytic skills they have learned in the classroom to actual management problems. Students also gain practical experience in business writing, giving formal presentations, and working in teams. The format for the course is a combination of work in the classroom and "lab" work. The lab work consists of visits with a client, developing a formal proposal, generating a final report and various other elements of a professional consulting arrangement.

6 credits, Letter graded (A, A-, B+, etc.)

**MGT 562: Telecommunication Networks**

The theory of telecommunication networks and their management applications. The course includes the following topics: basic principles of telecommunication, telecommunication network design, organizations involved in telecommunication, business applications, switching systems, voice messaging systems, local area networks, wide area networks, internetworking basics, principles of data communications, protocols, broadband networks, wireless communications, multimedia technology, the internet and electronic commerce, convergence topics (voice over IP).

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**MUS 501: Compositional Skills of Tonal Music**

A survey course covering the foundations of the marketing discipline. The course is designed to give students conceptual frameworks and tools to help firms meet demands of the marketplace in a profitable way. A wide range of marketing strategy topics (e.g., segmentation, positioning) and marketing tactics (the Four Ps of Marketing - Product, Price, Place, and Promotions) will be covered, as well as development of the discipline's foundations (definition, philosophy, and history of marketing).

3 credits, Letter graded (A, A-, B+, etc.)

**MGT 570: Strategy**

This principles and techniques of strategic management by which an organization sets and implements its long-range direction. This includes the processes of environmental scanning, self-assessment of organizational purpose and comparative advantage, and synthesis of organizational mission, plans, and strategic initiatives. Extensive use is made of case studies and in-class exercises.

3 credits, Letter graded (A, A-, B+, etc.)

**MGT 580: Global Operations**

A managerial approach to the concepts, issues, and techniques used to convert an organization's resources into products and services. Topics include strategic decisions for planning products, processes, and technologies, operating decisions for planning production to meet demand, and controlling decisions for planning and controlling operations through teamwork and Total Quality Management (TQM). Operational problems in producing goods and services are reviewed.

Prerequisite: MGT 515

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

**MGT 592: Organizational Behavior**

An approach to understanding the behavior of individuals in organizations is developed, with emphasis on implications for effective management. This approach is used to analyze decision problems encountered in managing human resources. Topics include individual and group decision-making skills, recruitment and selection, employee ability, motivation and incentive systems, job satisfaction, performance assessment and management, retention, training, and employee development.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

**MUS 502: Proseminar in Tonal Analysis**

The application of various techniques of analysis to tonal works. Rhythmic, harmonic, linear, thematic, and other elements of musical structure are considered. Preparation equivalent to MUS 501 is assumed.
MUS 503: Music in the 20th and 21st Centuries
An intensive course in contemporary musical styles, focusing on historical problems. Seminar reports and research papers on works of major significance.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

MUS 504: Analysis of Music of the 20th and 21st Centuries
Detailed analyses of various works that are representative of the significant compositional systems of recent music.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

MUS 505: Foundations of Musicianship
An intensive workshop in the skills of sight singing and dictation of tonal melodies, rhythm, and diatonic harmony. Repertoire is drawn from diverse styles and periods. Qualified students may be exempted from this course through a placement exam given at the beginning of the fall semester.
Fall, 2 credits, Letter graded (A, A-, B+, etc.)

MUS 506: Graduate Musicianship
An intensive workshop in the development of musicianship skills in advanced tonal and atonal music. The course includes dictation in a variety of harmonic, melodic, and rhythmic categories and prepared singing and sight-singing of complex tonal and atonal melodies (in bass, alto, tenor, and treble clef). Qualified students may be exempted from this course through a placement exam given at the beginning of the fall semester.
Spring, 2 credits, Letter graded (A, A-, B+, etc.)

MUS 507: Studies in Music History
Concentrated study of the works of a single composer, or of repertories that represent single compositional tendencies in Western music. Recent topics have included Mozart's operas, Goethe's Faust and the symphonic tradition, Bach cantatas, virtuosity, Stravinsky, music and nationalism, and introduction to popular music studies.
3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MUS 508: Studies in Composition and Theory
Study of contemporary or traditional compositional techniques or styles, including both analysis and exercises in writing. Not more than eight credits of MUS 507, 508, and 509 combined may be counted toward the degree.

MUS 509: Performance Studies
Study of an instrument or voice as a supplement to other work in a graduate music program. This course is designed for students who require piano study in order to pass the piano proficiency requirement, and for students not in a performance degree program who wish to study voice or an instrument.
Prerequisite: Audition
Fall or Spring, 1-3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MUS 510: The Fundamentals of Electronic Music
Technical fundamentals of electronic music. Students are instructed in the basic techniques of electronic music. Topics include software synthesis, MIDI systems, digital signal processing, and computer manipulation of natural sound. Students may be exempted from this course by permission of the instructor.
Fall or Spring, 1-3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MUS 511: Advanced Composition
Individual short experimental works or specific assignments. Uses of electronic music equipment.
Prerequisite: MUS 510 or the equivalent
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

MUS 512: Advanced Projects in Computer Music
A hands-on introduction to the uses of computers in the creation and performance of music. Topics include software synthesis, computer manipulation of natural sound, MIDI instruments and their use, and interactive performance. There is a brief survey of the history, literature and repertoire of the field.
Prerequisite: Music major or permission of the instructor
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

MUS 513: Workshop in Orchestration
Study of an instrument or voice as a supplement to other work in a graduate music program. This course is designed for students who require piano study in order to pass the piano proficiency requirement, and for students not in a performance degree program who wish to study voice or an instrument.
Prerequisite: Audition
Fall or Spring, 1-3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MUS 514: Audio Engineering
Technical fundamentals of audio engineering for the serious practitioner, with primary emphasis on sound reinforcement and recording arts. The course focuses on measurement and critical listening, and investigates the basic operational theory of principal devices and systems.
Prerequisite: permission of instructor
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

MUS 515: The Fundamentals of Electronic Music
A short survey of the history and literature of the medium is followed by study of the pertinent background in theoretical acoustics and practical engineering. Students are instructed in the basic techniques of electronic music production and modification.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

MUS 516: Electronic Music Workshop
Individual short experimental works or specific assignments. Uses of electronic music equipment.
Prerequisite: MUS 515 or the equivalent
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

MUS 517: Introduction to Computer Music
A hands-on introduction to the uses of computers in the creation and performance of music. Topics include software synthesis, computer manipulation of natural sound, MIDI instruments and their use, and interactive performance. There is a brief survey of the history, literature and repertoire of the field.
Prerequisite: Music major or permission of the instructor
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

MUS 518: Advanced Projects in Computer Music
Advanced projects, individual or collaborative, in computer music.
Prerequisite: MUS 517 and permission of instructor
Fall and Spring, 1-3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MUS 519: Composer's Forum
Practicum for student composers to learn how to present their music in a professional context.
1-2 credits, S/U grading
May be repeated 1 times FOR credit.

MUS 520: Introduction to Music Research for DMA Students
An introduction to research skills for DMA students in their first year of study. Meeting five times per term, the course introduces students to music research databases and searching, proper bibliographic practices, score editions, and other issues relevant to doctoral level research.
Offered
Fall, S/U grading

MUS 523: Advanced Composition
Individual projects for graduate students in composition.
Fall and Spring, 2-6 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MUS 524: Opera Studies
One of the most resilient and popular genres of spectacle in the West, opera has seen a remarkable continuity as an institution since its birth in 1600. Performed in the opera house, it has been produced by a fixed set of characters: the impresario, the librettist, the composer, the stage designer, and the director, but also singers, instrumentalists, dancers, and the chorus. Operas have traditionally absorbed narratives from mythology and history but have also been characterized by...
freely-invented plots. Operas have often generated political, philosophical, and artistic debates, and provide today’s scholars with a unique window into historical, ideological, sociological, and aesthetic issues. The hybrid genre par excellence, opera continues to be a catalyst for creativity in various arts, and in present-day production often features the most advanced media and technologies. This seminar will capitalize on both the continuity and the diversity of the genre, bringing together graduate students in music history, theory, and performance.

Offered
Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MUS 535: Lecture-Workshop in the Performance of Baroque Music
An examination of problems confronting the performer of music from the period ca. 1600-1750, from both musicological and practical points of view. The basso continuo, its function and realization; phrasing and articulation; ornaments, notated and improvised; period instruments; aspects of notation; bibliography. The course meets in lecture for two hours each week with a third hour devoted to the coaching of a rehearsal or performance of music prepared by members of the class.
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

MUS 536: Area Studies in Ethnomusicology
Examination of the music of a selected world area, combining musical analysis with a consideration of historical, social, and performance contexts. Recent topics have included Brazilian music from 1822 to the present; music, politics, and society in Eastern Europe; and a century of Middle Eastern musics. May be repeated for credit.
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MUS 537: Research Methods in Ethnomusicology
A practicum covering both the theoretical foundations and practical components of ethnomusicological field research and analysis. Emphasis is on designing and undertaking a small musical ethnography, and on exploring practical, ethical, ontological and epistemological aspects of ethnomusicological research. Weekly readings and a final project.
3 credits, Letter graded (A, A-, B+, etc.)
MUS 555: Topics in 20th-Century Music
Focused study of selected issues in music of the 20th century. Recent topics have included primitivism and exoticism; quotation, borrowing, and collage; the music of Roger Sessions; and the Second Viennese school.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MUS 557: Topics in Theory
Studies in the writings of music theorists from the Middle Ages through the present day in the context of contemporary repertoires. Recent topics have included modal theory as a model for melodic construction; efforts to adapt modal theory to polyphonic practice; rhythm in theory and practice; theories of tonality from Rameau to Schenker; theoretical approaches to post-tonal and 12-tone music; and theories of timbre and texture.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MUS 559: Topics in Analysis
Intensive analytical study of selected works and exploration of analytical problems. Recent topics have included analysis and performance, melody, Xenakis and Ligeti, Beethoven's late quartets, Berg's Lulu, and the string quartet since 1945.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MUS 563: Advanced Choral Conducting A
Advanced training in preparing and conducting choral works. Students spend a semester in score study, receive individual private instruction, and are expected to participate in the rehearsing of the University Chorus, the University Chorale, and the Chamber Singers. Open only to students enrolled in graduate conducting programs.

Fall and Spring, 3-6 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MUS 564: Advanced Choral Conducting B
Advanced training in preparing and conducting choral works. Not open to students enrolled in the graduate conducting programs.

Prerequisite: Instructor consent
Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)

MUS 565: Stony Brook Symphony Orchestra
Study and performance of orchestral works from the Baroque period to the present.

Fall and Spring, 1-2 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MUS 566: Camerata Singers
Study and performance of choral works for chamber chorus from all periods of music history.

May be repeated.

MUS 567: Master Class in Orchestral Repertory
Study of orchestral parts for sections (brass, strings, woodwinds) or for individual instruments. The course emphasizes overall ensemble skills and audition preparation. Different sections directed toward specific groups. See the course listing for offerings in any particular semester.

Fall and Spring, 1-2 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MUS 568: Jazz Ensemble
Study and performance of works for jazz ensemble from the early 20th century to the present.

Fall, 1-2 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MUS 569: Performance Problems in 20th-Century Music
A study of performance skills required in new music, with emphasis on polyrhythms, composite rhythms, control of tone color and dynamics, and the understanding of new methods of notation. Exercises and the study of selected 20th-century works.

Fall, 2 credits, Letter graded (A, A-, B+, etc.)

MUS 570: Introduction to the History and Performance of the String Bass in Jazz
Study of the historical development of the string bass in jazz and other related improvised musics through a selection of reading and listening projects. Practical assignments will include making transcriptions of classic records and then learning to play them on bass, employing the time-proven method of "copying the masters."

1-2 credits, Letter graded (A, A-, B+, etc.)

MUS 571: Advanced Instruction in Instrument or Voice
Individual guidance in technique and repertory, with 30 practice hours required each week. Each student is required to perform at least one solo piece per semester, unless excused by the instructor in a written note to the department's graduate program committee.

Fall and Spring, 1-2 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MUS 572: Improvisation
Practical study of the skills and sources of musical improvisation, including playfulness, emotion, courage, concentration, risk, instrumental and vocal technique, patience and trust. Improvisational skills will not be limited to any single musical style. All students will be required to improvise vocally or instrumentally.

Fall, 1-2 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MUS 573: Chamber Music
Chamber ensembles such as the string quartet, wind quintet, solo vocal ensemble, two-piano team, and other special groups meet, each under the direction of a member of the performance faculty, for the study of works from the repertoires of the respective groups, with particular attention given to the music of the 20th and 21st centuries.

Required: Presence at coaching sessions, at least three hours per week of uncoached rehearsal, and at least one performance per semester

Fall and Spring, 1-2 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MUS 574: Collaborative Keyboard Performance
Study and performance of the keyboard parts of instrumental and vocal recital repertoire.

Offered
Fall and Spring, 1 credit, Letter graded (A, A-, B+, etc.)
May be repeated 1 times FOR credit.

MUS 575: Master Class in Solo Repertory for Instrument or Voice
Performance techniques and problems in works for instrument or voice, drawn from all historical periods. The instructor is a teacher of the specific instrument in each case, except that his or her section may be open to students of certain other instruments with his or her permission. Not offered each semester in every instrument.

Fall and Spring, 1-2 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MUS 576: Instrumental Repertoire before 1750
Exploration of instrumental repertoire in the 17th and 18th centuries.
Fall or Spring, 2 credits, Letter graded (A, A-, B+, etc.)

MUS 577: Master Class in Performance Pedagogy
Guidance and supervision in the teaching of an instrument or voice.
2 credits, Letter graded (A, A-, B+, etc.)

MUS 579: Opera Workshop
Study and performance of scenes and complete operas from the standard and 20th-century repertories. An interdisciplinary approach involving the departments of Music and Theatre Arts.
Fall and Spring, 1-2 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MUS 580: Vocal Diction
A thorough study of the rules of pronunciation and International Phonetic Alphabet transcription in a major language of the voice repertory: Italian, French, or German. Special attention to lyric projection of the language as it relates to voice production, listener comprehension, and musical values. Course work includes coaching in appropriate song and operatic literature. The specific language studied rotates from semester to semester.
Fall and Spring, 1-2 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MUS 581: Harpsichord for Pianists (Beginning)
Fundamentals of harpsichord techniques, touch, and repertoire for students already possessing a keyboard background.
Fall, 2 credits, Letter graded (A, A-, B+, etc.)

MUS 582: Harpsichord for Pianists (Advanced)
Continuation of MUS 581: Further exploration of techniques and repertoire.
Prerequisite: Piano major or strong keyboard background.
Spring, 2 credits, Letter graded (A, A-, B+, etc.)

MUS 583: Continuo Realization
Practical and theoretical instruction in figured bass realization, based on the study of vocal and instrumental scores from 1600-1750. Required of students in harpsichord. Open, with consent of the instructor, to other qualified students who have some knowledge of figured bass realization.
Fall or Spring, 2 credits, Letter graded (A, A-, B+, etc.)

MUS 584: Baroque Chamber Ensemble
Study and performance of instrumental and vocal music, 1600-1750. Participants work from scholarly editions and original sources whenever possible and have the possibility of performing on replicas of early instruments. A concert is given at the end of the class term. Acceptance by audition.
Fall and Spring, 1 credit, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MUS 585: Early Music Performance Practice
Study and implementation of Renaissance and Baroque performance practices. Areas include brass ensemble music and lute and guitar repertories.
Fall and Spring, 2 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MUS 589: Practicum in Professional Skills
Practical training in activities related to the professional work of a performing musician, including teaching, solo and ensemble performance, conducting, internships and related musical work, both on and off-campus. Required of all full-time students in the M.M. performance program. All off-campus activities in fulfillment of this course must be approved by the Graduate Program Director, who acts as supervisor for this course.
Fall, 1-3 credits, S/U grading
May be repeated for credit.

MUS 590: Practicum in Teaching
Instruction in the department under the supervision of the faculty. (MUS 591 may not be included in the courses taken in fulfillment of degree requirements.)
Fall and Spring, 1-3 credits, S/U grading
May be repeated for credit.

MUS 591: Practicum in Teaching
Instruction in the department under the supervision of the faculty. (MUS 591 may not be included in the courses taken in fulfillment of degree requirements.)
Fall and Spring, 1-3 credits, S/U grading
May be repeated for credit.

MUS 592: Seminar on the Teaching of Music
Discussion of fundamental problems in teaching music. Topics may include the explanation of musical processes; communication to nonprofessionals; and integration of aspects of performance, theory, history, and analysis with one another. Required of all students who teach one of the introductory undergraduate courses in musicianship, theory, or literature; to be taken during the first semester of teaching.
Fall, 1 credit, S/U grading
May be repeated for credit.

MUS 593: Practicum in Performance
Individual instruction and/or coaching for professional performing experience.
Fall and Spring, 0-1 credits, S/U grading
May be repeated for credit.

MUS 596: Contemporary Chamber Players
The study and performance of music of the 20th and 21st centuries for ensemble, ranging from duos to larger conducted groups. Repertoire includes 20th-century classics as well as new works, including compositions written by Stony Brook students. A full schedule of public performances takes place.
Prerequisite: Permission of instructors
Fall and Spring, 1-3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MUS 597: Jazz Ensemble
Study and performance of works for jazz ensemble.
0-1 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MUS 598: Composition
Individual compositions of substantial proportions in electronic or concrete music media. The course may be repeated. Open only to qualified students in a music degree program.
Prerequisite: MUS 516 or the equivalent
Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MUS 599: Independent Studies
Individual studies under the guidance of a faculty member. Each student must submit to the graduate studies committee of the department a written prospectus of the work he or she intends to pursue, with the amount of credit proposed, together with the written endorsement of the prospective instructor. Approval of the graduate studies committee is required; hence this material should be submitted as soon as possible, and in any case within the first two weeks of the semester (or the first week of a summer session).
0-16 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MUS 615: Seminar in Electronic Music Composition
Individual compositions of substantial proportions in electronic or concrete music media. The course may be repeated. Open only to qualified students in a music degree program.
Prerequisite: MUS 516 or the equivalent
Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

MUS 623: Directed Study in Composition
Intended for doctoral students in composition.

**MUS 661: Directed Study in Conducting**

Intended for doctoral students in conducting.

**MUS 671: Directed Study in Instrumental and Vocal Performance**

Intended for doctoral students in instrumental and vocal performance.

**MUS 690: Advanced Practicum in Professional Skills**

Practical training through activities related to the professional work of a performing musician, including teaching, solo and ensemble performance, internships, and related musical work, both on-campus and off-campus. Required for all full-time students in the D.M.A. performance program. All off-campus activities in fulfillment of this course must be approved by the Graduate Program Director, who acts as a supervisor for this course.

**MUS 695: Doctoral Essay Tutorial**

Development of an essay to fulfill requirements in either DMA or PhD programs. Students may enroll in this course only after completing the required graduate seminars or proseminars (see program requirements) with a grade of "B" or better in both the seminar and the essay to be developed.

**MUS 696: Doctoral Colloquium or Lecture-Recital**

Students are required to enroll in MUS 696 in the semester in which the Ph.D. colloquium or the D.M.A. lecture-recital is given. The instructor, chosen in consultation with the directing committee, acts as an advisor or tutor, and signals to the graduate program committee that the colloquium or lecture-recital may be given.

**MUS 697: Directed Reading**

May be repeated 1 times FOR credit.

**MUS 699: Dissertation Research on Campus**

Intended for work in the area of the dissertation.

**MUS 700: Dissertation Research off Campus - Domestic**

Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place off-campus, but in the United States and/or U.S. provinces. Please note, Brookhaven National Labs and the Cold Spring Harbor Lab are considered on-campus. All international students must enroll in one of the graduate student insurance plans and should be advised by an International Advisor.

**MUS 701: Dissertation Research off Campus - International**

Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place off-campus, but in the United States and/or U.S. provinces. Please note, Brookhaven National Labs and the Cold Spring Harbor Lab are considered on-campus. All international students must enroll in one of the graduate student insurance plans and should be advised by an International Advisor.

**MUS 850: Summer Teaching**

Students who receive support for summer teaching must register for this course, which gives them full-time status.

**NET**

**NET 508: OBJ.ORIENTED SYS DEV**

**NET 509: ADVANCED VLSI DESIGN**

**NET 510: ADV.PROD:SCHED.CNTRL**

**NET 512: INTRO TO ELOPTICS**

**NET 513: PRIN ENGR MGT II**

**NET 514: SEM DEVICE PROCESIN**

**NET 515: SEMICONDUCT DEVPRO**

**NET 516: Man Machine Systems**

**PHI**

**PHI 500: Feminist Theories**

This course is designed to introduce students to the most recent developments in feminist theory, covering different currents as well as traditions. The seminar may focus on moral and political questions, the intersection between the social and the psychological, or culture and representation as it is negotiated in different cultural media (film, literature, architecture, music, etc.)

**PHI 501: Theories of Race**

This course is designed to introduce the student to different currents of analyses of race and racism. It focuses particularly on the relationship between philosophy and the development, legitimacy and legitimation of racial categories. The seminar may focus on moral and political philosophy, questions of epistemology or metaphysics, the intersections between the social and the psychological, or culture and representations of raced subjects as
they are negotiated in different cultural media (film, literature, architecture, music, etc.)

Fall, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

PHI 503: Theories of Ethnicity
This course focuses on the category of ethnicity. Using an inter-cultural, comparative
and historical approach, it seeks to expose
the student to the uses and misuses of this
category. The category of ethnicity will also be
studied in conjunctions with questions relating
to individual identity, national, cultural and
civilizational identities. Ethnicity, like Race
and Gender, is one of the most fundamental
markers of identity. Using interdisciplinary
and comparative methods and perspectives,
etnicity’s role in the constitutions of identities
will be studied.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

PHI 504: Intersections of Race,
Ethnicity and Gender
This course, which is analogous to an honors
senior seminar, seeks to integrate into a
productive dialogue the different methods,
traditions and perspectives used to analyze
Race, Ethnicity and Gender, while also
juxtaposing and comparing the similarities and
differences between them. The approach, as in
the whole program, will be interdisciplinary
and comparative.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

PHI 505: Core Course in Philosophy
and the Arts: History of Aesthetic
Theory
The basic course will investigate some of the
most important and influential theories of art
in the West from Plato to the present. Readings
and discussion in depth of major figures
will make up the content of the course: e.g.,
Plato, Aristotle, Kant, Hegel, Schopenhauer,
Nietzsche, heidegger, Collingwood, Langer,
Merleau-Ponty, Duftrenne. The focus throughout
will be on central issues in aesthetics such as imitation, truth, beauty,
expression, emotion, and imagination.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

PHI 506: Art and Its Problems
A consideration of basic problems in the
creation and appreciation of art. What is the
creative process? Who is the artist? How is art
to be compared with other symbolic forms
(e.g. language, science, technology)? What
does art offer that philosophy does not, and
vice-versa? In what ways does the gender or
racial identity of the artist affect the creation
of the work? What are the cultural, social and
political dimensions of the art work and its
reception?
3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

PHI 507: Aesthetic System
A concentrated reading of a single major work,
with attention both to its detailed structure
and to its larger significance. Candidates for
such reading include Aristotle’s Poetics, Kant’s
Critique of Judgement, Hegel’s lectures on
The Philosophy of Art, Adorno’s Aesthetic
Theory, Collingwood’s Principles of Art,
Langer’s Feeling and Form, Dewey’s Art as
Experience, heidegger’s “The Origin of the
Work of Art”, and Danto’s Transfiguration of
the commonplace.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

PHI 508: Contemporary Issues in the
Arts
With an eye on artworks accessible in the
public sphere - museums, galleries,
concerts, readings, dance performances, film -
philosophical questions will be raised: Why
these works now? How do they compare with
their predecessors? What do they portend for
the future of art? Visits to the sites and
performances of such works will be integrated
into an ongoing discussion of the issues they
raise within the context of aesthetic theory -
and what new theories they suggest.
3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

PHI 509: Special Seminar in Aesthetics
This is an advanced seminar in aesthetics that
focuses on a single question that arises in the
Philosophy of art. This question may be
approached through the writings of a single
author, or else by consulting texts of several
thinkers (including practicing artists as well
as philosophers). Examples of such questions
would be: What is the place of form in art?
How does emotion figure into the creation or
appreciation of art? To be taught on the main
campus by a regular faculty member. Ideally,
this course would be taken during the second
year of master’s degree work at Stony Brook
Manhattan.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

PHI 510: Ancient Philosophy
An in-depth reading of few fundamental texts
of classical antiquity that conceptualize mind/
soul as object of rational investigation. These
ancient theories contain within themselves all
the principal elements of later philosophies of
mind. This course aims at making these
elements explicit through the study of the
following: Anaxagoras, selected fragments on
’mind#; Plato, Republic (selection) and
Phaedo; Aristotle, De Anima (Peri Psyche);
Marcus Aurelius, The Meditations; Lucretius,
On the Nature of Things.
3 credits, Letter graded (A, A-, B+, etc.)

PHI 511: Modern Philosophy
This is an advanced course that investigates
pivotal connections between seventeenth and
eighteenth-century theories of knowledge,
metaphysics, aesthetics, and ethics. It surveys
key developments in these areas of philosophic
inquiry during the sixteenth and seventeenth
centuries. It also involves careful explicative
work on texts written by major thinkers of
the period, e.g., Descartes, Locke, Leibniz,
Spinoza, Malebranch, Shaftesbury, Hutcheson,
Hume, Rousseau, and Kant.
3 credits, Letter graded (A, A-, B+, etc.)

PHI 520: Advanced Studies in
Philosophy
Investigations into specialty areas led and
Directed by accomplished philosophers in the
discipline involved. Instructor consent
required. No more than six credits of PHI 520
may count towards the fulfillment of degree
requirements in the MA program.
Offered:
Fall, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

PHI 521: Contemporary Moral Issues
This examination of the radical nature of
traditional moral theory in its contemporary
applications will look at the ideas of Mill,
Kant, and Aristotle as variations on traditional
Judeo-Christian moral theory. Students will
write short papers on contemporary moral
issues as these are portrayed in short fiction.
3 credits, Letter graded (A, A-, B+, etc.)

PHI 535: Political Philosophy
This course will take up classics of political
philosophy and discuss contemporary
social life and ideologies in the light of the
theoretical frameworks they have achieved.
Readings and assignments will be drawn from
such exemplary works as Plato’s Republic,
Aristotle’s Politics, Machiavelli’s The Prince,
Hobbes’s Leviathan, Locke’s Second Treatise
of Government, and Marx’s Communist
Manifesto.
3 credits, Letter graded (A, A-, B+, etc.)

PHI 553: Philosophy of Education
The purpose of the course is to develop curricula which not only bridge educational gaps but which also develop within all students a sense of civil responsibility toward community issues and problems. This course critically examines such issues of ethnicity and race, family systems, affirmative action, and multiculturalism through the vehicle of Asian American studies.

3 credits, Letter graded (A, A-, B+, etc.)

**PHI 555: Perspectives on the Person**

The focus of this course will be the question of how the results of current research are related to our understanding of human development and whether they require us to revise our understanding of what a person is. Readings from classic philosophical texts, such as Plato, Locke, Kant, and from contemporary research in philosophy, psychology and other relevant sciences will be used. Offered as both CEI 587 and PHI 555

3 credits, Letter graded (A, A-, B+, etc.)

**PHI 562: Concepts and Methods in Evolutionary Biology**

The course aims at achieving two related objectives: first, to provide graduate students in Ecology & Evolution, other biology departments, as well as Philosophy, with a basic understanding of the varied methods (both experimental and statistical) that make up the body of evolutionary quantitative biology. The focus will be in particular on quantitative genetics and its interface with more modern approaches, including QTL mapping, bioinformatics and the various "omics" (genomics, proteomics, etc.). Second, students will become familiar with the fundamental concepts of philosophy of science, in particular as they relate to the conceptual analysis of the ideas that shape modern evolutionary and ecological theory. In this respect, the focus will be both on philosophical concepts such as falsificationism, induction, deduction, hypothesis testing and the nature of evidence, as well as on the meaning of key ideas in evolutionary ecology, like natural selection, genetic drift, and constraints.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

**PHI 571: American Philosophy:**

**Philosophical Foundations of American Politics**

Readings from Emerson, C.S. Peirce, G.H. Mead, W. James, G. Santayana, J. Dewey, J.H. Randall, and J. Buchler will give the student a grasp of the classic American tradition in philosophy and the plural strands that go to make it up, such as: the turn from idealism to semiotics, neo-realism and critical realism, pragmatism and pragmatism, the historical interest and the social interest, individualism and voluntarism, and the centrality of art and science in human affairs.

3 credits, Letter graded (A, A-, B+, etc.)

**PHI 572: ORIENTAL PHILOSOPHY**

**PHI 575: Philosophy of Religion**

Several aspects of the Judeo-Christian tradition raise philosophical questions worthy of further reflection and consideration. The first is the relation of religious faith to other sorts of knowledge and commitment: is religious belief more like belief in scientific experts or more like belief in one's spouse? A second is what sort of God is worth believing in and whether we can talk intelligibly about the deity. The third is whether and how any God worth believing in could be compatible with the obvious ills of our world.

3 credits, Letter graded (A, A-, B+, etc.)

**PHI 576: ETHICS AND VALUES**

**PHI 582: Philosophy of Art**

The purpose of this course is to encourage students to explore and enrich their aesthetic experience through reading, analyzing, discussing, and writing about various theories put forth by philosophers in the western tradition. Among topics to be considered are representation, expression, form, the aesthetic attitude, beauty, taste, criticism and interpretation of art, and the relation of art to other areas of experience. The course does not assume previous familiarity with philosophy or art; however, it does assume an intellectual commitment to the examination of difficult ideas. This course is offered as both CEI 573 and PHI 582.

3 credits, Letter graded (A, A-, B+, etc.)

**PHI 587: DIRECTED READINGS**

**PHI 588: DIRECTED RESEARCH**

**PHI 590: DIRECTED READINGS**

**PHI 595: DIRECTED RESEARCH**

**PHI 599: Master's Thesis Research**

*May be repeated 2 times FOR credit.

**PHI 600: Ancient Philosophy**

**PHI 601: Medieval and/or Renaissance Philosophy**

**PHI 602: Modern Philosophy**

**PHI 603: 19th-Century Philosophy**

**PHI 604: Special Topics in the History of Philosophy**

*May be repeated for credit.

**PHI 610: Philosophy and the Arts**

**PHI 611: Philosophy and Literature**

**PHI 612: Philosophy and Psychology**

**PHI 613: Philosophy and Politics**

**PHI 614: Philosophy and Linguistics**

**PHI 615: Philosophy and Feminism**

Co-scheduled with WST 611.

3 credits, Letter graded (A, A-, B+, etc.)

**PHI 616: Philosophy and Technology**

Co-scheduled with WST 611.

3 credits, Letter graded (A, A-, B+, etc.)

**PHI 617: Philosophy and Environmental Studies**

**PHI 618: Philosophy and the Sciences**

**PHI 619: Special Topics in Interface Studies**

*May be repeated for credit.

**PHI 620: Advanced Problems in Philosophy**

Delivery: Variable and repetitive credit

3 credits, Letter graded (A, A-, B+, etc.)

*May be repeated for credit.

**PHI 621: Independent Study**

*May be repeated for credit.

**PHI 622: Supervised Teaching**

**PHI 623: Teaching Practicum**

**PHI 624: New York Consortium Study**

This course designation should be used by students who enroll in seminars at participating universities of the New York Consortium of Graduate Schools. No more than six credits of consortium study (and none for first-year students at Stony Brook) may count toward the fulfillment of requirements in the doctoral program.

Stony Brook University Graduate Bulletin: www.stonybrook.edu/gradbulletin 125
GRADUATE COURSE DESCRIPTIONS

Prerequisite: Completion of first year in doctoral program (Philosophy)
Fall, 1-4 credits, Letter graded (A, A-, B+, etc.)

PHI 625: Prospectus Seminar
This seminar is taken by all doctoral students in the Spring semester of their third year. The primary goal is to have each write a dissertation proposal.
Spring, 3 credits, S/U grading

PHI 630: Seminar in Continental Philosophy

PHI 631: Seminar in Analytic Philosophy

PHI 632: Seminar in Comparative Philosophy

PHI 633: American Pragmatism and Naturalism

PHI 634: Eastern Philosophy

PHI 635: Philosophy of Science and Logic

PHI 636: Metaphysics

PHI 637: Epistemology
A study of selected conceptions of the nature, structure and content of knowledge, as found in classical and contemporary theories of knowledge.
3 credits, Letter graded (A, A-, B+, etc.)

PHI 638: Philosophical Psychology

PHI 639: Social and Political Philosophy

PHI 640: Ethics

PHI 641: Aesthetics

PHI 642: Philosophy of Religion

PHI 643: Semiotics

PHI 644: Special Topics in Contemporary Philosophy
May be repeated for credit.

PHI 699: Dissertation Research on Campus
Prerequisite: Completion of first year in doctoral program (Philosophy)
Fall, 1-4 credits, Letter graded (A, A-, B+, etc.)

PHI 700: Dissertation Research off Campus - Domestic
Prerequisite: Advancement to candidacy (G5).
Major portion of research must take place on SBU campus, at Cold Spring Harbor, or at the Brookhaven National Lab.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

PHI 701: Dissertation Research off Campus - International
Prerequisite: Must be advanced to candidacy (G5).
Major portion of research will take place off-campus, but in the United States and/or U.S. provinces. Please note, Brookhaven National Labs and the Cold Spring Harbor Lab are considered on-campus. All international students must enroll in one of the graduate student insurance plans and should be advised by an International Advisor.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

PHY 501: Classical Mechanics
Analytical classical mechanics including Lagrangian and Hamiltonian formulations and the Hamilton-Jacoby theory. Variational principles, symmetries and conservative laws. Selected advanced problems such as parametric and nonlinear oscillations, planetary motion, classical theory of scattering, rigid body rotation, and deterministic chaos. Basic notions of elasticity theory and fluid dynamics.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

PHY 503: Methods of Mathematical Physics I
A selection of mathematical techniques useful for physicists. Topics are selected from: linear algebra, complex variables, differential equations, asymptotic analysis, special functions, boundary value problems, integral transforms, perturbation theory as applied to linear and nonlinear systems. This course should be taken by entering graduate students seeking enrichment in these areas.
Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)

PHY 505: Classical Electrodynamics I
First course in a two-part sequence. Electrostatics and magnetostatics in vacuum and matter; electromagnetic induction, Maxwell's equations and gauge invariance; electromagnetic waves. Additional topics as time permits. Vector analysis, eigenfunction expansions and Green functions will be introduced and used.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

PHY 506: Classical Electrodynamics II
Second course in a two-part sequence. Maxwell's equations are applied to electromagnetic waves in materials and at interfaces between media. Electromagnetic radiation by moving charges. Special relativity. Additional topics as time permits.
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

PHY 510: Introduction to Nonlinear Dynamics
This course concentrates on developing the tools used to analyze models of dynamical systems associated with physical phenomena, such as coupled electrical mechanical, chemical and biological oscillators, amplitude equations, symplectic maps, etc. There is a discussion of the basic theorems, as well as methods used to derive perturbation solutions for differential equations and maps using the method of normal forms.
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

PHY 511: Quantum Mechanics I
First course in a two-part sequence. Topics include basic quantum physics and mathematical apparatus; application to one dimensional examples and simple systems.
Symmetries, angular momentum, and spin. Additional topics as time permits.

**PHY 512: Quantum Mechanics II**
Second course in a two-part sequence, covering variational principles, perturbation theory, relativistic quantum mechanics, quantization of the radiation field, many-body systems. Application to atoms, solids, nuclei and elementary particles, as time permits.

*Fall, 3 credits, Letter graded (A, A-, B+, etc.)*

**PHY 514: Current Research Instruments**
In a series of distinct units, various members of the experimental research faculty describe the nature of their work, explain the major principles of their laboratory instruments, discuss how these instrument systems function, and conduct tours of their laboratories showing the apparatus in action. The student becomes familiar with most of the experimental research instrumentation in the department.

*3 credits, S/U grading*

**PHY 515: Methods of Experimental Research I**
An experimental course required for all graduate students. The goal of the course is to provide firsthand experience with the nature of experimental work. For students oriented toward theory, the course gives a background for reading and evaluating experimental papers. The course is based on classic measurements in nuclear, particle, atomic, condensed matter physics, and astronomy. Students can gain experience in handling cryogenic liquids, vacuum systems, lasers, pulse counting and coincidence methods, resonance measurements, and electronic instrumentation, such as lock-in amplifiers, particle detectors, coincidence counters, computer control, etc. Numerical analysis of data, presentation of results in written, graphic, and oral form, and meaningful comparison of experiments and theory are part of the course. Working alone or with, at most, one partner, each student must do one experiment from each of four different groups.

*3 credits, Letter graded (A, A-, B+, etc.)*

*May be repeated for credit.*

**PHY 517: Laboratory Course in Astronomical Techniques**
A course designed to introduce the theory, design, and operation of modern astronomical instrumentation and to familiarize the student with the use of telescopes. Current astronomical techniques will be discussed with emphasis on methods of observational measurements and reduction of data. Emphasis is given on optical techniques appropriate for wavelengths shorter than one micron. Extensive laboratory and observing exercises may be expected.

*Spring, 3 credits, Letter graded (A, A-, B+, etc.)*

**PHY 518: Applications of Synchrotron Radiation**
An introduction to the principles of synchrotron radiation is followed by a series of lectures given by graduate faculty and guest lecturers with expertise in using synchrotron radiation for research in physics, chemistry, materials science, biology and medicine. Most of these presentations are followed by hands-on experience with synchrotron instrumentation at Brookhaven National Laboratory. Access to user facilities, including safety requirements, preparation of user proposals, user training and other issues, and also covered.

*Spring, 1-3 credits, S/U grading*

**PHY 521: Stars**
A study of the atmospheres, interiors, and evolution of stars. The contact between theory and observations is emphasized. Stellar atmospheres in hydrostatic and radiative equilibrium described. Models for the calculation of stellar spectra are discussed. Stellar winds are studied. Next, theoretical studies of stellar interiors and evolution, including equations of state, energy transport, and nuclear energy generation, are developed. Structures of main sequence, red giant, pre-main sequence, and white dwarves are studied and compared to observations. The evolution of single stars up to supernovae and the peculiar evolution of close binary systems are also studied.

*Fall, 3 credits, Letter graded (A, A-, B+, etc.)*

**PHY 522: Interstellar Medium**
A study of the interstellar medium with emphasis on physical processes. Topics include kinetic theory, equation of transfer, spectral lines, non-thermal emission, ionization effects of dust, and formation and spectroscopy of molecular clouds. The components of the interstellar medium and the interactions between them are discussed in detail, as well as the process of star formation.

*Spring, 3 credits, Letter graded (A, A-, B+, etc.)*

**PHY 523: Galaxies**
A basic course on the observational and theoretical aspects of the content, morphology, kinematics, and dynamics of galaxies. Topics include the size, shape, and location of the sun in the Milky Way; stellar populations; the disk and spheroidal components; galactic rotation; distance determination in the Milky Way and to external galaxies; galaxy classification and the Hubble Law. Theoretical topics center on stellar dynamics, including potential theory; stellar orbits; and spiral structure. The course also includes a brief introduction to cosmology.

*Fall, 3 credits, Letter graded (A, A-, B+, etc.)*

**PHY 524: Cosmology**
A basic course on cosmology: Hubble expansion, Friedmann universes, age of the universe, microwave background radiation, big-bang nucleosynthesis, inflation, growth of gravitational instabilities and galaxy formation, correlation functions, local density and velocity perturbations, and dark matter.

*Prerequisite: PHY 523 or permission of instructor*

*Spring, 3 credits, Letter graded (A, A-, B+, etc.)*

**PHY 534: Radio Astronomy**
Topics covered include continuum and spectral-line radio astronomy. Within the Milky Way Galaxy topics include the interstellar medium, the physics and kinematics of molecular clouds, star formation in giant molecular clouds, chemistry of molecular clouds, galactic structure, spiral structure, and pulsars. Extragalactic topics include radio galaxies and jets, radio loud quasars, molecular and atomic gas in galaxies, luminous infrared galaxies, the missing mass problem in spiral galaxies, and cosmic microwave background radiation. Radio astronomy measurement techniques for single telescopes and aperture synthesis techniques are also covered, although the emphasis is on scientific results.

*Fall or Spring, 1-3 credits, Letter graded (A, A-, B+, etc.)*

**PHY 535: Pulsed Power Engineering**
This course provides an introduction to the techniques, technology and applications of pulsed power in the field of charged particle acceleration. It is appropriate for students and scientists with a background in accelerator technology who are interested in furthering their understanding of pulsed high voltage techniques and power modulator design.

*Offered Summer, 1-2 credits, Letter graded (A, A-, B+, etc.)*

**PHY 536: The Physics of Free Electron Lasers**
The purpose of this course is to introduce the students to the physics of Free Electron Lasers and Synchrotron Radiation. This course is suitable for graduate students who want to learn more about Free Electron Lasers and Synchrotron Radiation physics.

Offered
Summer, 1-2 credits, Letter graded (A, A-, B+, etc.)

PHY 537: Project Management for Scientists and Engineers

Scientists and engineers are well prepared to develop and execute scientific research, but do not receive the systematic approaches and training necessary to successfully execute the managerial mechanisms by which such research must often be realized. Consequently, scientific project management expertise is often acquired in a random, almost Monte Carlo approach. Unfortunately, budgets are too tight, reputations too fragile, and careers too short to rely on such a stochastic approach. Successful project management is NOT the mere use of narrow fiscal and schedule tools, but involves all aspects of developing, executing, and controlling a project. The successful manager of scientific projects understands the need for technical, managerial, and organizational psychology acumen. This course is designed to present and develop knowledge and understanding of a number of skills for principal investigators, project scientists, engineers and group leaders to help ensure successful project outcomes.

Offered
Summer, 1-2 credits, Letter graded (A, A-, B+, etc.)

PHY 538: High Current Beam Physics

The purpose of this course is to introduce the students to the physics of beam transport in high current accelerators. This course is suitable for graduate students or students from other fields considering accelerator physics as a possible career. This course also can provide a broader background to engineers and technicians working in the field of accelerator technology.

Offered
Summer, 1-2 credits, Letter graded (A, A-, B+, etc.)

PHY 539: Medical Applications of Accelerators

This course bridges the gap between the principles of accelerator systems and the requirements of important medical applications. The course is useful for accelerator physicists and engineers interested in learning about medical applications or medical physicists interested in learning about aspects of accelerator design. Some familiarity with basic particle acceleration fundamentals is useful. Cross-fertilization can lead to new ideas or new careers.

1-2 credits, Letter graded (A, A-, B+, etc.)

PHY 540: Statistical Mechanics

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

PHY 541: Advanced Statistical Mechanics

Topics are selected from cluster expansions, elementary theory of quantum fluids, phase transitions, transfer matrix, Ising and ferroelectric models, polymers and membranes, disordered systems, and fluctuation and nonequilibrium phenomena.

Fall, 1-3 credits, Letter graded (A, A-, B+, etc.)

PHY 542: Fundamentals of Accelerator Physics and Technology with Simulations and Measurements Lab

This course is an introduction to the underlying principles and uses of the nearly 14,000 particle accelerators that are used worldwide in medicine, industry, and scientific research. The course is suitable for senior undergraduate and entry-level graduate students in physics and engineering or students from other fields with a particular interest in accelerator-based science.

Offered
Summer, 1-2 credits, Letter graded (A, A-, B+, etc.)

PHY 543: Superconducting RF for High-# Accelerators

This graduate level course covers application of superconducting radio frequency (SRF) technology to contemporary high-# accelerators: storage rings, pulsed and CW linacs, including energy recovery linacs (ERLs). The course will address physics and engineering aspects of using SRF in accelerators. It will cover beam-cavity interactions issues specific to superconducting cavities, a systems approach to designing SRF systems and engineering of superconducting cavity cryomodules. The course is intended for graduate students pursuing accelerator physics and graduate engineers and physicists who want to familiarize themselves with superconducting RF systems.

Offered
Summer, 1-2 credits, Letter graded (A, A-, B+, etc.)

PHY 545: Accelerator Physics

The purpose of this course is to give a theoretical foundation to the physics and technology of particle accelerators. It is designed for students at the graduate level.

Offered
Summer, 3 credits, Letter graded (A, A-, B+, etc.)

PHY 546: Beam Physics with Intense Space Charge

The purpose of this course is to provide a comprehensive introduction to the physics of beams with intense space charge. This course is suitable for graduate students and researchers interested in accelerator systems that require sufficient high intensity where mutual particle interactions in the beam can no longer be neglected.

Offered
Summer, 3 credits, Letter graded (A, A-, B+, etc.)

PHY 547: Classical Mechanics and Electromagnetism in Accelerator Physics

The course focuses on several topics of classical mechanics and electromodynamics of particular importance for accelerator physics.

Offered
Summer, Letter graded (A, A-, B+, etc.)

PHY 551: Nuclear Physics I

Nucleon structure, conservation laws and the static quark model; nuclear force and the two nucleon system; bulk properties of nuclear matter, charge distribution, spin, isospin, mass, alpha decay, nuclear fission; electromagnetic and weak interaction; collective motion; microscopic models of the nucleus; nuclear matter under extreme conditions, high rotational states, heavy ion physics at RHIC, nuclear astrophysics.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

PHY 552: Nuclear Physics II

Nucleon-nucleon scattering and effective range approximation; the nucleon-nucleon interaction calculated from meson exchange;
effective forces between nucleons in nuclei and nuclear matter; the renormalization group approach to these interactions; Fermi-liquid theory of the nuclear many-body problem; thermodynamics of hadrons at high temperature; RHIC physics with heavy ions including transition from hadrons to quark gluon plasma, restoration of chiral symmetry, equation of state, initial conditions, thermodynamics of hadrons at high temperature.

PHY 557: Elementary Particle Physics

3 credits, Letter graded (A, A-, B+, etc.)

PHY 562: Lasers and Modern Optics

Introduction to the theory of lasers including resonance conditions, normal modes, optical cavities and elementary quantum mechanics. Description of types of lasers, methods of control, limitations of power, precision, wavelength, etc. Applications to research and industry. Throughout the course, there will be many problems that involve writing computer programs to solve simple differential equations and model different aspects of laser operation. Not for satisfying physics Ph.D. breadth course requirements.

Fall, 1-3 credits, Letter graded (A, A-, B+, etc.)

PHY 565: Quantum Electronics I: Atomic Physics

Quantum electronics is a synthesis of quantum physics and electrical engineering, and is introduced in two independent semesters. A description of simple atoms and molecules and their interaction with radiation includes atoms in strong and/or weak external fields, two-photon spectroscopy, superradiance, Rydberg states, lasers and laser spec-troscopy, coherent transients, etc.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

PHY 566: Quantum Electronics II: Quantum Optics

Quantum electronics is a synthesis of quantum physics and electrical engineering, and is introduced in two independent semesters. This course focuses on the quantum properties of light. The quantized electromagnetic field and its correlations are used to understand nonclassical states from various sources such as two-level atoms and nonlinear systems interacting with radiation fields.

Fall, 1-3 credits, Letter graded (A, A-, B+, etc.)

PHY 570: Introductory Physics Revisited for Teachers

This seminar allows students to explore the fine points of topics normally covered in high school physics. Not for PhD credit.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

PHY 571: Electromagnetic Theory for Teachers

The course reviews vector calculus and develops Maxwell’s equations relating electric and magnetic fields to their sources. Applications for time-independent fields are developed for solving boundary value problems and the interactions of fields in bulk matter. An oral presentation of a relevant topic suitable for a high-school class is required. Not for PhD credit.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

PHY 573: Mechanics for Teachers

The Newtonian formulation of classical mechanics is reviewed and applied to more advanced problems than those considered in introductory physics. The Lagrangian and Hamiltonian methods are then derived from the Newtonian treatment and applied to various problems. An oral presentation of a relevant topic suitable for a high-school class is required. Not for PhD credit.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

PHY 576: Quantum Mechanics for Teachers

This course consists of two parts. Those relations among the properties of systems at thermal equilibrium that are independent of a detailed microscopic understanding are developed by use of the first and second laws of thermodynamics. The concepts of temperature, internal energy and entropy are analyzed. The thermodynamic potentials are introduced. Applications to a wide variety of systems are made. The second portion of the course, beginning with the kinetic theory of gases, develops elementary statistical mechanics, relates entropy and probability, and treats simple examples in classical and quantum statistics. An oral presentation of a relevant topic suitable for a high-school class is required. Not for PhD credit.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

PHY 577: Physical and Mathematical Foundations of Quantum Mechanics for Teachers

Physical and mathematical foundations of quantum mechanics. Maxwell waves and their properties: intensity, energy density, and momentum density. Planck-Einstein relation between energy and frequency for light quanta. De Broglie relation between momentum and wavelength. Number density and probability density of photons. One-photon quantum mechanics, with Maxwell field as wave
function. Diffraction phenomena, Uncertainty relation between wavelength and position, hence between momentum and position. In addition to the requirements for the undergraduate course PHY 307, students taking this course must prepare and present a talk on quantum physics suitable for a general (non-physics) adult audience. This course cannot be taken for credit toward the PhD degrees in Physics. Approval of the Program Director is required for taking this course for credit toward a Master Degree.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

PHY 578: Quantum Physics for Teachers

The concepts, historical development and mathematical methods of quantum mechanics. Topics include Schrödinger's equation in time-dependent and time-independent forms, and one- and three-dimensional solutions, including the treatment of angular momentum and spin. Applications to simple systems, especially the hydrogen atom, are stressed. An oral presentation of a relevant topic suitable for a high school class is required. Not for PhD credit.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

PHY 579: Special Topics for Teachers

Topics of current interest to high school teachers are discussed in order to bring the teachers up to date on the latest developments in various areas of research. Examples could include the standard model of particle physics, nanofabrication techniques, atomic force microscopy, etc. Not for PhD credit.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

PHY 580: Special Research Projects

Research under the direction of a faculty member. Not open to Ph.D. candidates.

Fall and Spring, 1-18 credits, Letter graded (A, A-, B+, etc.)

PHY 582: Optics Rotation

Optical science students experience three to eight week periods in each of several appropriate research groups. At the end of each period a report is required that describes the topics studied or project done. May not be taken for credit more than two semesters.

Fall and Spring, 0-2 credits, Letter graded (A, A-, B+, etc.)

May be repeated 2 times FOR credit.

PHY 585: Special Study

Reading course in selected topics. Fall and Spring, 1-18 credits, Letter graded (A, A-, B+, etc.)

May be repeated for credit.

PHY 595: Master's Degree Thesis Research

Independent research for Master's degree students. Open only to those approved by individual faculty for thesis work.

Fall and Spring, 1-18 credits, Letter graded (A, A-, B+, etc.)

May be repeated for credit.

PHY 598: Graduate Seminar I

Special research topics centered on monographs, conference proceedings, or journal articles. Topics include solid-state physics, atomic physics, quantum optics and applications of synchroton radiation. Required for all first-year graduate students.

Fall and Spring, 0-1 credits, Letter graded (A, A-, B+, etc.)

May be repeated for credit.

PHY 599: Graduate Seminar II

Special research topics centered on monographs, conference proceedings, or journal articles. Topics include elementary particles, nuclear physics, galactic and extragalactic astronomy, and cosmology and accelerator physics. Required for all first-year graduate students.

Fall and Spring, 0-1 credits, Letter graded (A, A-, B+, etc.)

May be repeated for credit.

PHY 600: Practicum in Teaching

This course provides hands-on experience in teaching. Activities may include classroom teaching, preparation and supervision of laboratory experiments, exams, homework assignments, and projects.

Fall and Spring, 1-3 credits, Letter graded (A, A-, B+, etc.)

May be repeated for credit.

PHY 610: Quantum Field Theory I

Quantization of relativistic fields: Lorentz and gauge symmetries, relativistic spin, the S-matrix and scattering; the standard model; perturbation theory, renormalization and effective field theories; path integrals and relations to condensed matter physics.

Spring, 1-3 credits, Letter graded (A, A-, B+, etc.)

PHY 612: Theoretical Particle Physics

Applications of quantum field theory to interactions between elementary particles. Topics are chosen from perturbative quantum chromodynamics, the standard electro-weak model, lattice field theory, grand unified models, supersymmetry, and current research problems.

Fall, 1-3 credits, Letter graded (A, A-, B+, etc.)

PHY 620: Modern General Relativity

General theory of relativity; tensor analysis, Einstein's field equations, experimental tests, black holes, gravitational waves, cosmology. May also include topics such as spinor methods, conformal invariance, and introduction to string theory or supergravity.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

PHY 621: Advanced Quantum Field Theory

Proofs of renormalizability and unitarity on non-Abelian gauge theories using modern methods of Becchi-Rouet-Storey-Tyutin (BRST) symmetry; descent equations for anomalies; classical instantons and their quantum corrections, including integration over zero modes; background field methods, other topics if time permits. PHY 610/611 or equivalent is prerequisite.

Fall or Spring, 1-3 credits, Letter graded (A, A-, B+, etc.)

PHY 622: String Theory I

This course is intended for graduate students who have familiarity with gauge & quantum field theory. Topics will be selected from: Free bosonic & spinning strings and heterotic & Green-Schwarz superstrings; conformal field theory; tree-level and one-loop amplitudes; partition functions; spacetime supersymmetry and supergravity; compactification & duality; winding & Kaluza-Klein modes; 11-dimensional supergravity; branes in supergravity; D-branes in string theory; T-duality; M-theory; complex geometry and Calabi-Yau manifolds; string field theory; other advanced topics if time permits. PHY 610/611 or equivalent is prerequisite.

Fall or Spring, 1-3 credits, S/U grading

PHY 623: String Theory II

This course is intended for graduate students who have familiarity with gauge & quantum
field theory. Topics will be selected from: free bosonic & spinning strings and heterotic & Green-Schwarz superstrings; conformal field theory; tree-level and one-loop amplitudes; partition functions; spacetime supersymmetry and supergravity; compactification & duality; winding & Kaluza-Klein modes; 11-dimensional supergravity; branes in supergravity; D-branes in string theory; T-duality; M-theory; complex geometry and Calabi-Yau manifolds; string field theory; other advanced topics if time permits. PHY 610/611 or equivalent is prerequisite.

Fall or Spring, 1-3 credits, S/U grading

PHY 655: Advanced Graduate Seminar in Theoretical Physics
A weekly seminar on advanced theoretical concepts. The discussion starts with a graduate student presentation and it is conducted under the guidance of a faculty supervisor.

1-3 credits, S/U grading
May be repeated for credit.

PHY 664: Astronomy Journal Club
Presentation of preliminary research results and current research problems by students and faculty. Required every semester of all astronomy graduate students.

Fall and Spring, 1 credit, S/U grading
May be repeated for credit.

PHY 666: Cool Stars
A weekly seminar concentrating on observational and theoretical studies of cool stars and related objects. Emphasis is on ongoing research and recent results in this area. Speakers include faculty, students, and visitors. Topics anticipated in the near future include results from the Hubble Space Telescope and ROSAT. Students registering for one credit will be expected to present at least one seminar.

Fall and Spring, 1 credit, S/U grading
May be repeated for credit.

PHY 668: Seminar in Astronomy
A weekly series of research seminars presented by visiting scientists as well as by the faculty. Required every semester of all astronomy graduate students.

Fall and Spring, 1 credit, S/U grading
May be repeated for credit.

PHY 669: Nuclear Astrophysics Seminar
A weekly seminar concentrating on topics in nuclear astrophysics, including dynamics of supernova collapse, structure and evolution of neutron stars, equation of state, the role of neutrinos in nucleosynthesis, etc.

Fall or Spring, 1 credit, S/U grading
May be repeated for credit.

PHY 670: Seminar in Theoretical Physics
Fall and Spring, 0-1 credits, S/U grading

PHY 672: Seminar in Elementary Particle Physics
Fall and Spring, 0-1 credits, S/U grading

PHY 674: Seminar in Nuclear Physics
Fall and Spring, 0-1 credits, S/U grading

PHY 676: Seminar in Solid-State Physics
Fall and Spring, 0-1 credits, S/U grading

PHY 678: Atomic, Molecular and Optical Physics Seminar
Fall and Spring, 0-1 credits, S/U grading

PHY 680: Special Topics in Theoretical Physics
Fall and Spring
1-3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

PHY 681: Special Topics in Statistical Mechanics
Fall and Spring
1-3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

PHY 682: Special Topics in Solid-State Physics
Fall and Spring, 1-3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

PHY 683: Special Topics in Astronomy
Fall and Spring, 1-3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

PHY 684: Special Topics in Nuclear Physics
Fall and Spring
1-3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

PHY 685: Special Topics in Mathematical Physics
Fall and Spring, 1-3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

PHY 686: Special Topics in Elementary Particles
Fall and Spring, 1-3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

PHY 687: Topics in Biological Physics
The “Topics” courses in the 680 sequence do not have specific description, since the subject matter within the broadly defined topic may change from one semester to the next.

1-3 credits, Letter graded (A, A-, B+, etc.)

PHY 688: Special Topics in Astrophysics
Fall and Spring, 1-3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

PHY 689: Dissertation Research on Campus
Independent research for Ph.D. degree candidates. Open only to students who have advanced to candidacy (G5). Major portion of research must take place on SBU campus, at Cold Spring Harbor, or at the Brookhaven National Lab.

Fall, 1-9 credits, S/U grading
May be repeated for credit.

PHY 700: Dissertation Research off Campus - Domestic
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place off-campus, but in the United States and/or U.S. provinces. Please note, Brookhaven National Labs and the Cold Spring Harbor Lab are considered on-campus. All international students must enroll in one of the graduate student insurance plans and should be advised by an International Advisor.

Fall, 1-9 credits, S/U grading
May be repeated for credit.

PHY 701: Dissertation Research off Campus - International
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place outside of the United States and/or U.S. provinces. Domestic students have the option of the health plan and may also enroll in MEDEX. International students who are in their home country are not covered by
mandatory health plan and must contact the Insurance Office for the insurance charge to be removed. International students who are not in their home country are charged for the mandatory health insurance. If they are to be covered by another insurance plan they must file a waiver be second week of classes. The charge will only be removed if other plan is deemed comparable.

All international students must received clearance from an International Advisor.

Fall, 1-9 credits, S/U grading
May be repeated for credit.

POL 800: SUMMER RESEARCH
May be repeated for credit.

POL

Political Science

POL 501: Introduction to Statistics for Public Policy
This course acquaints student with statistics. It begins with the basics of applied statistical analysis, including probability and hypothesis testing, and builds to simple regression analysis. Requires use of computer packages.

Prerequisites: Some elementary mathematics/statistics background helpful
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

POL 502: Intermediate Statistics for Public Policy
This course utilizes multivariate regression analysis and explores violations of the linear model. Requires use of computer.

Prerequisite: POL 501 or equivalent
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

POL 504: Research Design
This course will cover a variety of research methods that can be used to study attitudes and opinions: Experimental methods (in laboratory and field settings), quasi-experimental designs, surveys and questionnaires, and methods for studying various psychological characteristics of attitudes such as reaction time and lexical decision tasks.

Offered
Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)

POL 509: Public Budgeting and Finance
This course develops the rationale for public taxation and spending programs. It examines the role of public finance in the economy, and explores the use of program and functional budgets, capital and operating budgets, intergovernmental expenditures, etc. Focuses on state and local governments.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

POL 510: Personnel Systems for Public Policy
This course examines the development of civil service and other bureaucratic personnel systems in American government. It focuses on the knowledge that managers must have to utilize human resources appropriately in the constrained public sector environment. Focuses mainly on state and local government.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

POL 530: Topics in Public Affairs
Specially organized seminars are offered on topics of particular importance to students of public affairs. These courses are led by distinguished experts in those policy areas.

3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

POL 531: Topics in Public Affairs: Planning
This course addresses the planning process as a decision-making tool in the implementation of public policy in housing, land-use, transportation, and environmental management. The course also investigates intergovernmental relations and the impact of citizen participation on policy changes.

Offered in
Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

POL 534: Intergovernmental Relations and Policy Delivery
The examination of the formulation, implementation, and impact of intergovernmental policy are the core concepts to be covered in this course. Several policies are examined in-depth, including grant-in-aid programs, General Revenue Sharing, housing and community development, and employment programs. The historical, economic, and political foundations of intergovernmental policy delivery systems are examined.

3 credits, Letter graded (A, A-, B+, etc.)

POL 540: Data Applications in Public Policy
This course studies the strategic use of data to support public policy proposal design and implementation. With a focus on U.S. domestic policy, the class will gain proficiency in the application of data to identify policy problems, determine causative factors, develop and implement persuasive policy proposals, and evaluate the policy effectiveness.

Prerequisite: POL 501
Spring, 3 credits, Letter graded (A, A-, B+, etc.)
POL 541: Survey Research for Public Policy
This course studies the techniques of survey research and their application in the development of public policies. Topics include survey design, survey population sampling, use of survey data to frame policy choices and attitudes towards existing policies.
Prerequisite: POL 501
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

POL 542: Regional Planning
This course addresses the planning process as a decision-making tool in the implementation of public policy in housing, land-use, transportation, and environmental management. The course also investigates intergovernmental relations and the impact of citizen participation on policy changes.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

POL 543: Environmental Politics and Policy
Federal environmental policies, such as the National Environmental Policy Act, the Coastal Zone Management Act, and the Federal Pure Waters Management Act are examined in this course. The policies, politics and administrative activities of federal, state, and local levels are considered. Finally, the interaction of the public sector, the private sector, and citizen groups in the implementation of environmental policy is discussed. This course is offered as both CES 553 and POL 543.
3 credits, Letter graded (A, A-, B+, etc.)

POL 544: Human Behavior as Rational Action
Rational behavior means choosing among possible actions those that are most efficient in meeting one’s goals. Whether people do so is one of the oldest unresolved disputes in philosophy and the social sciences. We will trace the main positions in this dispute as they have evolved in philosophy, psychology, economics, anthropology and sociology. Even if individuals do act rationally, can we assume that the large scale social patterns that result are necessarily effective? Readings will consider the topic abstractly, but also in the concrete settings of small intimate groups, formal organizations, and primitive and modern economic, social and political systems in both stable and revolutionary situations.
3 credits, Letter graded (A, A-, B+, etc.)

POL 553: Foundations: Comparative, International
Survey and evaluation of the major theoretical approaches, issues, and problems in comparative political analysis. The course examines such areas as political development, empirical democratic theory, or political socialization, along with a detailed examination of one or more selected non-American political systems.
3 credits, Letter graded (A, A-, B+, etc.)

POL 560: American Democracy: Its Critics and Defenders
This course will examine the central components of American democratic government. Critics and defenders of the over 200 year-old Constitution (Congress, President, Supreme Court) will be discussed, as will arguments surrounding the role of political parties, pressure groups, and the bureaucracy. Most readings will be from contemporary authors and reference sources. This course is offered as both CEI 560 and POL 560.
3 credits, Letter graded (A, A-, B+, etc.)

POL 561: Dynamics of Public Opinion
This course provides an overview of the literature on public opinion. The course will start by considering the micro-foundations of opinions and the psychology of opinion holding. How much do people know about politics and other aspects of the social world? What are the consequences of differences in knowledge and attitude strength? Building from there, we will discuss the structure of attitudes and opinions, specifically, the nature of political ideology. A number of determinants of opinions will be discussed including values and personality. Finally, the course will examine the dynamics of attitudes and opinions and their relationship to government policy and larger social trends.
Offered
Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)

POL 562: Passionate Politics: Mobilization, Interest Groups, and Social Movements
This course discusses political mobilization: the factors that motivate political involvement and the consequences that high levels of public engagement have on elections and the development of public policy. The course begins with several high profile examples of citizen engagement that have had noticeable impact on American politics. This first section also includes a discussion of the various ways in which Americans can be mobilized from involvement in election campaigns to the distribution of political information via social networks. The course then shifts focus to cover the psychology of political mobilization in detail, including the importance of group memberships and identities, emotions, and values. An entire unit of the course is devoted to psychology of group membership in which the mobilizing power of identities and the role of politically motivating emotions are discussed at length. Finally the last section of the course is devoted to specific examples of political mobilization in the U.S. including the environment/green movement, issue groups such as the right-to-life movement, racial politics, and highly polarized partisan politics. Overall, the course is designed to illuminate the psychology of political mobilization and apply these principles to contemporary American politics.
Offered
Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)

POL 563: Thinking and Emotion in Public Opinion
This course reviews recent research in cognitive, social, and political psychology on the interplay between cognition and emotion in explaining social and political behavior. Traditionally, political science has viewed thinking as a conscious cognitive process of intentional deliberation. Emotions and other feelings have been ignored or seen as interfering with rational though. Moreover, until recently there has been almost no consideration of what psychologists call implicit or unconscious thought processes in understanding public opinion. Psychologists and communications researchers now understand that implicit events and processes (e.g., symbol or music cues in political advertising) can have profound effects on how citizens evaluate political candidates, groups, and issues. We will examine the traditional approach to political cognition and consider how this recent research may alter our understanding of the formation of public opinion.
Offered
Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)

POL 564: Social Influences
In studying public opinion, people often focus on the arguments, information, and overt attempts to persuade. In doing so, we neglect the impact of the social environment in which an individual is situated. Friends, family, and aspects of the broader social environment all deeply influence the attitudes people hold, the tenacity with which they hold them, and the political behaviors they engage in. Rather than focusing on direct persuasion, this course emphasizes the effect social context can have
upon people's opinions even without overt argumentation or even information exchange. Students will learn about the influence of 1) other individuals (e.g. socialization, social network influence), 2) social roles (e.g. power, obedience) 3) societal influence (e.g. normative influence, conformity, deviance & rejection), and 4) influence from other environmental sources (e.g. priming).

**Offered**

*Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)*

**POL 565: Persuasion and Propaganda**

Politics at its core is about persuasion. It is about argumentation and debate, and about bringing citizens to a particular way of thinking about an issue, candidacy, or event. Given its centrality in the political process, understanding the dynamics of political persuasion should be a high priority for the discipline. In a more theoretical vein, the concept of “attitude” is among the most indispensable in the social sciences. This course is intended to provide a survey of contemporary theory and research on attitude formation and change. It is not intended to be a general course on the mass media, but rather is concerned only with mass media research as it pertains to individual-level political attitude processes. The course is divided into the following three sections: (1) A consideration of basic concepts (e.g. what is an “attitude”), methodological challenge, and recent developments (e.g. the distinction between implicit and explicit attitudes); (2) An overview of major psychological theories of persuasion that attempt to answer Harold Lasswell’s classic question: Who says what, in which channel, to whom, and with what effect? (3) An examination of the major agents of political persuasion - the mass media, political elites, social context, and interpersonal processes.

**Offered**

*Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)*

**POL 566: The Psychology of Voting**

The course examines the key motivations, attitudes, perceptions, and beliefs that guide voters in the process of making up their minds in choosing candidates in elections, including the decision to turn out at all in elections. The list of topics includes party identification (acquisition, genetic basis, development over the life cycle, and historic change); opinions about policy issues and the conceptualization of politics in ideological terms; the impact of valence issues (the economy and national security); perceptions of candidates (personal as well as political qualities); group influence on individual decisions, particularly racial attitudes; and the impact of the campaign (media ads, debates etc.) on vote choices.

*Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)*

**POL 567: Culture, Values, and Public Opinion**

This course investigates the evolution of values, cleavages, political space, and issues in cross-national perspective (with particular focus on the advanced industrialized countries of the US, Europe, Israel, Japan, and Australia). We begin our study with the analysis of traditional socio-economic cleavages in determining issue positions, and the ‘end of ideology’ theses propounded by comparative political scientists, such as Daniel Bell and Francois Fukuyama, and elaborated by scholars of the behavioral revolution such as Inglehart, Dalton, and Franklin. We then explore the strengths and weaknesses of paradigm shifts to values, buttressed by public opinion data. Bringing in cultural and neo-institutional explanations of political behavior and change, the course weds individual level analysis and group behavior theories with rigorous empirical testing. We will look at cross-national and longitudinal data sets to examine the evolving political space stemming from new politics, identity politics, immigration, and “New Security” threats in a global era. Finally, the course will conclude by looking at how different levels of analyses (individual, group, and institutions) contribute to explain contentious politics, ‘boundary-making’ (‘us’ and ‘them’), and the ‘politics of difference’ across cultures.

*Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)*

**POL 595: Internship Public Policy**

Prerequisite: Permission of GPD

*3-6 credits, Letter graded (A, A-, B+, etc.) May be repeated for credit.*

**POL 596: Directed Policy Research**

Student works under supervision of faculty member on research project related to public policy.

*1-6 credits, Letter graded (A, A-, B+, etc.)*

**POL 597: Master’s Paper in Public Policy**

This course is primarily for students already employed in related field. In lieu of internship, student writes a Master’s Paper which goes beyond their normal employment duties to apply theory and methods to a particular policy issue.

*6 credits, Letter graded (A, A-, B+, etc.)*

**POL 598: Thesis Registration**

May be repeated for credit.

**POL 599: Internship in Public Policy**

This course is an applied internship in a public, not-for-profit, or private sector organization that deals with public policy. The student works in the organization and prepares a daily journal of activities, as well as a paper at the conclusion of the course, applying program knowledge to the internship activities.

*3-6 credits, S/U grading May be repeated for credit.*

**POL 600: Research Project**

A two-semester introduction to research for first-year students. The course introduces issues of research design through lectures and presentations of current research by faculty members. Each student designs his or her own research paper under the guidance of a faculty member familiar with his or her area of interest. Final papers are due in the beginning of May.

*3 credits, Letter graded (A, A-, B+, etc.) May be repeated for credit.*

**POL 601: Foundations: Public Policy and Political Economy**

A systematic introduction to the principles of political economy. Develops a microeconomic model and approach to public policy analysis. A major part of the course is devoted to student projects that analyze the political economy of a governmental policy.

*3 credits, Letter graded (A, A-, B+, etc.)*

**POL 602: Applied Data Analysis I**

The application of statistical and mathematical models to the analysis of political data: introduction to the research process and to topics in measurement, basic descriptive statistics, and inferential statistics.

*3 credits, Letter graded (A, A-, B+, etc.)*

**POL 603: Applied Data Analysis II**

The application of statistical and mathematical models to the analysis of political data: regression analysis.

*3 credits, Letter graded (A, A-, B+, etc.)*

**POL 604: Applied Data Analysis III**

The application of statistical methods to the analysis of political data. The emphasis is on diagnosing and dealing with violations of assumptions of statistical models. Topics covered include advanced regression, models for discrete dependent variables, systems of equations, and selection bias.

*3 credits, Letter graded (A, A-, B+, etc.)*
POL 605: Foundations: American Politics
A review of the basic political science literature on American politics, with emphasis on American political institutions.
3 credits, Letter graded (A, A-, B+, etc.)

POL 606: Time Series Analysis
This seminar will consider statistical models for political processes observed over time. The major topics will include co-integration, time varying parameter models and duration models.
3 credits, Letter graded (A, A-, B+, etc.)

POL 607: Social Survey in Contemporary Society
This course on political socialization focuses on continuity and change in political attitudes and behavior across the life span. Topics include the stability of political attitudes—contrasting the greater durability of political partisanship and basic values with the relative instability of issue positions; the social psychology of attitude change, which lends some insight into the conditions under which attitudes are most likely to change; the importance of political period or era as a determinant of political attitudes and behavior; and the existence and coherence of distinct political generations. Some attention is also given to the political changes that accompany old age, including changes in attitude and behavior linked to growing dependency on the Social Security and Medicare systems.
3 credits, Letter graded (A, A-, B+, etc.)

POL 608: Foundations: Political Psychology, Behavior
A review and analysis of the political behavior literature, including such topics as attitude formation and change, belief systems, political socialization, demographic and small group influences on political beliefs and conduct, political leadership, electoral behavior, elite vs. mass politics, decision making, personality and politics, political conformity, and protest.
3 credits, Letter graded (A, A-, B+, etc.)

POL 609: Advanced Research Design
A practical application of topics in the philosophy of science to research design. Students prepare their dissertation proposal as a part of this course.
3 credits, Letter graded (A, A-, B+, etc.)

POL 610: Foundations II: Experimental Design and Methods
An overview of experimental research with an emphasis on experimental design, data analysis, and interpretation. Students develop the ability to critically evaluate experimental research. Students also participate in the development, implementation, and analysis of a laboratory experiment.
3 credits, Letter graded (A, A-, B+, etc.)

POL 613: Game Theory for Political Science
Introduction to formal models of strategic behavior in static, dynamic, and repeated games. Technical emphasis is formulation and solution of games of complete and incomplete information; a variety of equilibrium concepts will be introduced. Substantive applications include spatial models of candidate behavior in elections; agenda control and bargaining in legislatures; lobbying by interest groups; common pool resource problems; and cooperation between rivals.
3 credits, Letter graded (A, A-, B+, etc.)

POL 614: American Judiciary
A seminar on judicial process and behavior. Emphasis is placed on the Supreme Court, but trial courts and other appellate courts are examined as well. Topics include constitutional interpretation and both legal and extra-legal models of decision making. Students should possess basic methodological skills.
3 credits, Letter graded (A, A-, B+, etc.)

POL 615: Legislative Process
A seminar on the legislative process, focusing on current research on the United States Congress.
3 credits, Letter graded (A, A-, B+, etc.)

POL 616: Political Parties and Groups
A seminar on parties, campaigns, and elections in the United States. Topics covered include party organization and leadership, nomination and general election campaigns, and the role of parties in government.
3 credits, Letter graded (A, A-, B+, etc.)

POL 617: Electoral Behavior
Models of voting choices; key attitudes such as party identification, issue orientations, and ideology; the impact of group affiliations, economic conditions; campaign strategies of candidates; congressional vs. presidential elections; historical change, e.g., party realignments.
3 credits, Letter graded (A, A-, B+, etc.)

POL 618: American Political Ideology
This course examines American political ideology as it is reflected in public opinion, political debate, and public policy. The goal is to understand the underlying bases of conflict and consensus in American politics and the ways in which they influence and constrain debate over public policy. The course traces the development of political conflict in the United States and examines the basis of contemporary political debate.
3 credits, Letter graded (A, A-, B+, etc.)

POL 620: Government Regulation of Business
An examination of the scope of government regulation of business in the United States today—regulation at both the federal and state levels and by both economic and social agencies. The course compares market vs. regulatory policies as well as possible explanations for why some regulatory agencies change over time. Finally, the course considers proposed reforms, such as clearer legislative standards, curbs on "revolving door" practices, greater citizen participation in agency proceedings, and deregulation.
3 credits, Letter graded (A, A-, B+, etc.)

POL 621: Theories of Policy Making
An introduction to theories of policy making, especially policy formulation, stressing reading and thinking about classics and acquiring skills necessary for theorizing, including mathematical modeling and formal theory. Laboratories focus on improving special skills (e.g., optimization) and theorizing about particular policy areas (e.g., pork barrel politics).
3 credits, Letter graded (A, A-, B+, etc.)

POL 622: Bureaucracy and the Policy Process
An examination of bureaucracy as part of the policy-making process. This course reviews theoretical explanations for the bureaucracy as a political institution and implications of its rapid growth since the New Deal. It also looks inside bureaucratic organizations, examining factors that influence the exercise of discretion and policy implementation.
3 credits, Letter graded (A, A-, B+, etc.)

POL 629: Experimental Game Theory
Surveys experimental tests of formal models derived from political economy and game theory, and applies behavioral and social-psychological theories to explain deviations from equilibrium behavior. The methodologies of psychological and economic experiments are contrasted and explored. Substantive applications include social trust, bargaining power, agenda control, committee decision making, common pool resource problems, and political persuasion.
3 credits, Letter graded (A, A-, B+, etc.)
POL 631: Political Cognition
Surveys the contemporary psychological literature on human memory and cognition, with emphasis on applications to political information processing.
3 credits, Letter graded (A, A-, B+, etc.)

POL 632: Mass Communication and Political Persuasion
In-depth examination of the role of mass media in the political process and the psychological dynamics of media influence. Effects of the media on public opinion and voting. Implications of media influence on democratic theory.
3 credits, Letter graded (A, A-, B+, etc.)

POL 633: Social Influence and Group Processes in Political Decision Making
Review of contemporary theories of social influence processes and group decision making, with emphasis on applications to decision making in politics. Special focus on small-group methods and research applications.
3 credits, Letter graded (A, A-, B+, etc.)

POL 634: Behavioral Decision Theory
Emphasizes psychological theories of judgment and choice and prediction of the errors that individual decision makers are likely to make. These ideas are applied to a variety of political contexts.
3 credits, Letter graded (A, A-, B+, etc.)

POL 664: Advanced Institutions

POL 670: Advanced Topics: Political Economy I
An intensive examination of major substantive and methodological concerns involved in the study of political economy.
3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

POL 671: Advanced Topics: Political Economy II
Reading and research in the area of political economy.
3 credits, Letter graded (A, A-, B+, etc.)

POL 673: Advanced Topics: American Politics I
A seminar in American institutions and processes, focusing on current research in such areas as Congress, the Supreme Court, the presidency, political parties, or bureaucracy.
3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

POL 674: Advanced Topics: American Politics II
A continuation of POL 673.
3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

POL 675: Advanced Topics: Comparative Politics I
Readings and research papers on topics in comparative politics. Particular attention is given to concepts and methods identified with the field.
3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

POL 676: Advanced Topics: Methods I
A course reviewing the literature and methodology of specific areas of political science research. The course relates directly to research applications and provides students with an opportunity to apply advanced research tools to selected substantive problems.
3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

POL 677: Political Decision Making
Review of the literature and methods related to a topic or problem in contemporary political science research. The course relates directly to research applications and provides students with an opportunity to apply advanced research tools to selected substantive problems.
3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

POL 678: Advanced Topics: Political Psychology/Behavior I
Reading and research in the area of political psychology and behavior.
3 credits, Letter graded (A, A-, B+, etc.)

POL 679: Advanced Topics: Political Psychology/Behavior II
Reading and research in the area of political psychology and behavior.
3 credits, Letter graded (A, A-, B+, etc.)

POL 680: Directed Study
Individual studies under the guidance of a faculty member. Subject matter varies according to the needs of the student.
1-6 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

POL 681: Directed Study
Individual studies under the guidance of a faculty member. Subject matter varies according to the needs of the student.
1-9 credits, S/U grading
May be repeated for credit.

POL 690: Research Colloquium
Students participate in weekly departmental colloquia where they serve as discussants of research reports presented by individual faculty members or outside investigators reporting on current research.
3 credits, Letter graded (A, A-, B+, etc.)

POL 691: Research Practicum I
A course actively involving students in an ongoing research project under the direction of a principal investigator. Students participate in all stages of the research project and are required to prepare a research report on one aspect of the project.
3 credits, S/U grading
May be repeated for credit.

POL 692: Research Practicum II
A continuation of POL 691. Students actively participate in either a second research project, where they will again prepare a research report, or continue their participation in the same project, where they are then assigned a subset of data for analysis or carry out a specific research aim of the project.
3 credits, S/U grading
May be repeated for credit.

POL 693: Practicum in Teaching

POL 699: Dissertation Research on Campus
Dissertation research under direction of advisor.
Prerequisite: Advancement to candidacy (G5); permission of graduate program director.
Major portion of research must take place on SBU campus, at Cold Spring Harbor, or at the Brookhaven National Lab.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

POL 700: Dissertation Research off-campus - Domestic
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place off-campus, but in the United States and/ or U.S. provinces. Please note, Brookhaven National Labs and the Cold Spring Harbor Lab are considered on-campus. All international students must enroll in one of the graduate student insurance plans and should be advised by an International Advisor.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

POL 701: Dissertation Research off-campus - International
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place outside of the United States and/or U.S. provinces. Domestic students have the option of the health plan and may also enroll in MEDEX. International students who are in their home country are not covered by mandatory health plan and must contact the Insurance Office for the insurance charge to
be removed. International students who are
not in their home country are charged for the
mandatory health insurance. If they are to be
covered by another insurance plan they must
file a waiver by second week of classes. The
charge will only be removed if other plan is
deemed comparable.

All international students must received
clearance from an International Advisor.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

POL 800: Summer Research
May be repeated for credit.

POR

Portuguese

POR 500: Reading Portuguese
Systematic instruction in the fundamentals of
reading comprehension and in specialized
subject-oriented vocabulary.
Prerequisite: Permission of instructor
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

POR 575: Luso-Brazilian Readings
Major literary works from 19th-and 20th-
century Portugal and Brazil, especially narratives.
Prerequisite: Reading proficiency in
Portuguese and permission of instructor
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

PSY

Psychology

PSY 501: Analysis of Variance and
Experimental Design
The design and analysis of factorial
experiments having a single dependent
variable. Topics include between- and within-
subjects designs, mixed-factor designs,
interactions, trend analysis, and planned
comparisons. Emphasis on applications in
psychological research. Required of all Ph.D.
students in psychology.
Prerequisite: Undergraduate statistics, Co-
requirese: PSY 508
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

PSY 502: Correlation and Regression
Correlation, regression, multiple correlation,
multiple regression, partial correlation,
and introductions to some of the following topics: factor analysis, mediational analysis,
structural equation modeling, relation of
regression to analysis of variance, analysis of
covariance, discriminant function analysis, and
multivariate analysis of variance. Required of all Ph.D. students in psychology. Spring
3 credits, Letter graded (A, A-, B+, etc.)

PSY 504: First-Year Lectures
Presentation and discussion of current research
progress and interests. Required of all first-
year Ph.D. students. Fall and Spring
S/U grading

PSY 505: Structural Equation Modeling
and Advanced Multivariate Methods
Thorough coverage of structural equation
modeling and brief coverage of other
specialized techniques used in data analysis in
psychology, such as multi-level modeling and
cluster analysis (topics for brief coverage vary
from year to year). The course emphasizes
hands-on work with real data sets, using
standard statistical software packages.
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

PSY 506: Psychometric Methods
This course surveys traditional and evolving
views on item design, reliability, and validity,
reviews statistical methods related to test
construction, and applies this material to
the design and evaluation of observational,
rating, and self report methods in domains
of interest to psychologists. The course also
examines the impact of test characteristics
on data analysis and the role of test design in
theory construction.
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

PSY 508: Introduction to Computer
Applications in Statistics
Computer protocol and introduction to
statistical packages and necessary utility
programs. Fall and Spring
0-1 credits, S/U grading
May be repeated for credit.

PSY 510: History of Psychology
Intensive reading in the history of psychology
from original sources. Emphasis is on class
discussion and relation to modern problems.
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

PSY 511: Learning
A consideration of the basic principles of
learning. Analysis of the leading theories of
learning as well as areas of controversy and
dispute.

PSY 513: Theories of Attention
This course covers some of the major
thoretical perspectives that have shaped the
attention literature, starting with historical
distinctions of early versus late selection and
ending with more contemporary mathematical,
neurophysiological, and neuorcomputational
theories. Specific questions will include:
#What is attention?# (is it a unitary thing
or a grab-bag of assorted processes), 
#How does it work?#, and #What paradigms have
researchers used to study attention?# (discriminant
listening, priming, search, etc.).
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

PSY 514: Sensation and Perception
This course covers the sensory mechanisms
that change physical stimuli (e.g., a picture of
your friend) into neural information, the major
brain areas involved in processing this sensory
information for various perceptual abilities
(e.g., motion perception, color perception,
object perception, etc.), and the different
theoretical approaches to analyzing a given
perceptual phenomenon.
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

PSY 518: Memory
Review of theory and phenomena related to
human memory. Topics include representation of
schemas and categories, encoding,
forgetting, implicit learning, and memory for
procedures. Several recent models of long-
term memory representation are discussed and
compared.
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

PSY 520: Psycholinguistics
The psychology of language, including the
mental lexicon, sentence processing,
pragmatics, discourse, production and
comprehension of utterances in conversation,
language and thought, first-language
acquisition, and computational approaches.
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

PSY 524: Cognitive Development
This course presents the developmental
perspective as applied to human cognition.
Topics include (1) characteristics and
constraints on cognitive abilities in infancy,
childhood, and adolescence, (2) mechanisms of
developmental change, and (3) links between
cognitive development and selected applied topics.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

PSY 533: Principles Applicable to Clinical Psychology: Historical/ Systemic Perspectives

A critical review of how principles of general psychology apply to clinical psychology. The course material will be discussed within the context of the history of ideas and major systems of thought as they relate to conceptualization, assessment, and intervention.

Prerequisite: Psychology doctoral student.
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

PSY 534: Assessment: General Principles, Clinical Interviews, and Adult Psychotherapy

General principles of assessment; clinical interviewing; structured interviews for assessing axis-I and axis-II psychopathology; ethics and cultural diversity. Prerequisite: Clinical psychology doctoral student
Fall, 2 credits, Letter graded (A, A-, B+, etc.)

PSY 535: Advanced Research Methods

Advanced research methods employed in clinical, personality, social, and behavioral research. Fall or Spring
3 credits, Letter graded (A, A-, B+, etc.)

PSY 537: Methods of Intervention: Treatment of Internalizing Disorders

This course covers the theory and research associated with the treatment of internalizing disorders of adults, adolescents, and children. Among the topics covered are the treatment of phobias, school refusal, panic disorder, general anxiety disorder, social anxiety, post-traumatic stress disorder, complicated grief, obsessive compulsive disorder, and mood disorders. In the treatment of each, particular emphasis is placed on how therapy needs to be modified depending on whether one is working with a child, adolescent or adult.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

PSY 538: Method of Intervention: Treatment of Externalizing Disorders and Relationship Problems

This course focuses on the treatment of externalizing disorders of adults and children as well as intimate partner problems like relationship discord and partner abuse. A developmental focus is taken as exemplified by coverage of child externalizing problems such as Oppositional Defiant Disorder, Conduct Disorder, and Attention Deficit Disorder, Borderline Personality Disorder and Partner Abuse. Treatments of alcohol abuse and eating disorders in both teens and adults are presented. Finally, treatment of schizophrenia is addressed along with coverage of the course of schizophrenia across the lifespan. Individual, couple, and family treatments are reviewed.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

PSY 541: Social Psychology of Close Relationships

High level overview of current theory and research on the social psychology of close relationships.
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

PSY 542: Psychology of Addictive Behaviors

Study of psychological, behavioral and biological theories of addiction.
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

PSY 543: Attachment

This course examines current psychological theories of infant-parent and child-parent attachment and child-parent attachment, with special attention to assessment methods, clinical applications and controversy regarding the importance of early experience.
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

PSY 544: Emotion & Cognition

This course focuses on fundamental questions regarding the interaction between emotion and cognition, and how such this interaction can be measured. Key topics will include: differentiating emotions from other affective states, understanding the functions of discrete emotions, the role of the consciousness in emotional experience, and whether emotions can be controlled; additionally, the course will address emotion-cognition interactions in the domains of memory, attention, perception and reasoning/decision-making. We will also address developmental changes and cross-cultural differences in emotion and cognition. The goal of the course is to be able to develop a translational research proposal rooted in basic research on emotion and cognition.
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

PSY 545: Psychopathology: Conceptual models and internalizing disorders

Theory and research on abnormal behavior in children, adolescents, and adults. A lifespan development approach is taken, with a focus on classification, conceptualizations and models of psychological disorders, and the phenomenology, epidemiology, course, etiology, pathogenesis, psychopathology, and pathophysiology of internalizing disorders such as mood and anxiety disorders.
Fall, 2 credits, Letter graded (A, A-, B+, etc.)

PSY 546: Measurement and Scaling

An historical introduction to the measurement of psychological variables and survey of contemporary scaling methods with an emphasis on psychophysical scaling and experimental applications.
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

PSY 549: Prejudice and Discrimination

This course will provide an overview of theoretical perspectives, research methods, empirical findings, and practical applications of psychological research on prejudice, stigma, and intergroup relations. Critical thinking about theorizing and research in this area will be emphasized during class discussions and through a course project. Students are admitted with permission by instructor.
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

PSY 552: Social and Personality Development

A survey of milestones and processes of social development in infancy and childhood. Relevance to understanding adult personality and social relationships is emphasized.
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

PSY 555: Social Psychology

An introduction to social psychology, a field of study examining how people feel about, think about, and influence others. Topics include attitudes, motivation, social judgments, and interpersonal behaviors. Coursework focuses on identifying basic principles that transcend particular content domains.
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

PSY 556: Stress and Coping

In this course, we examine current issues, challenges, and questions in two related areas of psychology: stress and coping. We will cover classical approaches in addition
to recent empirical research and theoretical development. Students are not expected to have prior familiarity with the topic areas. We will begin by reviewing definitions and major theoretical orientations. In subsequent weeks we will concentrate on issues relevant to stress, coping, and related topics such as social support, across a broad range of circumstances, rather than focusing on specific stressful contexts such as chronic illness or bereavement. For example, we will examine ways to define successful and maladaptive coping. We will also consider whether social support is better conceptualized as a commodity or as an individual perception. We will compare contradictory evidence about the benefits of perceived control, and we will discuss problems of generalizing research findings to different ethnic, cultural, and other groups.

Offered:
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

PSY 558: Theories of Social Psychology: Health Applications

This course provides an overview of the ways in which social psychological theories and perspectives can be used to understand thoughts and behavior relevant to health and illness. It covers social influence, social comparison, pluralistic ignorance, social support, cognitive dissonance, message framing, and fear communication. The course also covers links between personality characteristics and health and how broader social and cultural environment affects health and illness.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

PSY 559: Psychology of Women's Health

This course covers a variety of psychologically-important topics in women's health based on current research findings. We address psychological contributors to and consequences of women's health and illness, focusing on diseases that affect women differently or disproportionately than men (including coronary heart disease, cancer, AIDS, and autoimmune diseases), women's reproductive health (including menstruation, contraception, pregnancy, infertility, and menopause), health behaviors (including substance abuse, exercise, and eating), and other topics such as violence against women, women's mental health, and women as health care providers and health researchers.

Co-scheduled with WST 559.
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

PSY 560: Cognitive Neuroscience

The functions of the normal and pathological primate brain in behavior. Consideration of anatomical, neurophysiological and pharmacological correlates of behavioral functions such as perception, attention, motivation, learning, memory, cognition, and language. The behavioral consequences of various forms of brain pathology are discussed. Students who took this course prior to Fall 2009 may repeat this course once for credit.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated 1 times FOR credit.

PSY 561: Cognitive and Behavioral Neuroscience I

This course introduces students to neural elements responsible for processing information supporting sensation, perception, cognition and movement. Starting with the philosophy of the mind and the history of neuroscience, the course proceeds with an introduction of cells, neural signaling, transmitters and receptors. How these elemental units are integrated to support emergent properties, such as object recognition, is illustrated. Conversely, examples of complex behavioral impairments resulting from dysfunction in elemental units illustrated. The course proceeded to cover neural metabolism, and its relation to disorders of memory and motor dysfunction. Last, stress and its role in neurophysiological disorders is discussed.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

PSY 562: Cognitive and Behavioral Neuroscience II

Cognitive and Behavioral Neuroscience illustrates how cellular circuits support function. Classic experiments demonstrating function from use of electrophysiological data, lesions and transmitter manipulations are discussed. Students interested in understanding how individual neurons and neural circuits and integrated regional systems directly support specific behaviors will find this course of interest. A textbook is used for the readings.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

PSY 563: Neuropsychological Assessment

Classroom discussions of issues in neuropsychological assessment and design of assessment batteries are combined with practical experience in the assessment of clinical populations. Each student is assigned to a supervisor to learn assessment techniques for research and/or clinical practice.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

PSY 564: Neuropsychopharmacology

This course covers the mechanisms of transmitters and related drug action in the nervous system. In addition to exploring transmitter/receptor relationships, the course covers the sequence of events initiated by this action. Through understanding of these processes, the course then links drug action to nervous system outcomes such as movement, cognition, pain and mood.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

PSY 565: Functional Neuroanatomy

Just as a function can be derived from the structure of everyday objects, so too can function be derived from the study of brain architecture and neural connectivity. Accordingly, this course takes a structural approach to the understanding of the nervous system and behavior. To complement a disciplinary focus on cognition, affect and emotions, this course will emphasize the connectivity of higher order brain regions. Students will first be introduced to the global organization of the nervous system and a general framework for information processing. Then sensory and motor pathways will be discussed in more detail. The course will end with topics such as the neurocircuitry of addiction, emotion, and memory.

Offered
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

PSY 581: Cognitive and Behavioral Neuroscience Colloquium I

Colloquium presentations on current research problems by advanced students, staff, and visiting scientists. This sequence is required of all students in the Biopsychology Program.

Fall, 0-3 credits, S/U grading
May be repeated for credit.

PSY 582: Cognitive and Behavioral Neuroscience Colloquium II

Colloquium presentations on current research problems by advanced students, staff, and visiting scientists. This sequence is required of all students in the Biopsychology program.

Spring, 0-3 credits, S/U grading
May be repeated for credit.

PSY 583: Experimental Psychology Colloquium

Seminars on current research problems directed by students, staff, and invited
PSY 584: Experimental Psychology Colloquium

Seminars on current research problems directed by students, staff, and invited scientists. Required of all Experimental/Cognitive students.

Fall, 0-3 credits, S/U grading
May be repeated for credit.

PSY 585: Social and Health Psychology Colloquium I

Colloquium presentations on current research problems by advanced students, staff and visiting scientists. This sequence is required of all students in the Social and Health Psychology Programs.

Offered
Fall, 0-3 credits, S/U grading
May be repeated for credit.

PSY 586: Social and Health Psychology Colloquium II

Colloquium presentation on current research problems by advanced students, staff, and visiting scientists. This sequence is required of all students in the Social and Health Psychology Program.

Offered
Spring, 0-3 credits, S/U grading
May be repeated for credit.

PSY 594: Psychology of Gender

This class examines how gender affects and is affected by behavior, thoughts, and emotions. We investigate gender differences and similarities across the lifespan and consider various perspectives on the study of gender, including psychobiology, social cognitive theory, social role theory, and cross-cultural research.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

PSY 595: Human Development

An examination of the biological and psychological development of children and adolescents and its relationship to teaching and curriculum development for diverse learners. The course will focus on special education programs, childhood and adolescent psychiatric disorders, and societal issues.

Offered:
Fall, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

PSY 596: Psychopathology: Externalizing & Psychotic Disorders

Theory and research of abnormal behavior in children, adolescents, and adults. A lifespan development approach is taken, with a focus on the phenomenology, epidemiology, course, etiology, pathogenesis, psychopathology, and pathophysiology of externalizing disorders (e.g., conduct, disorder, personality disorders, substance use disorders) and psychotic disorders.

Prerequisite: Must be Psychology Graduate Student
Spring, 2 credits, Letter graded (A, A-, B+, etc.)

Self-report and projective measures of personality and psychopathology; targeted assessments and measures; intellectual and cognitive assessment; assessment of children and parents; ethics and cultural diversity.

Spring, 2 credits, Letter graded (A, A-, B+, etc.)

PSY 603: Ethics and Professional Issues

Ethics and professional issues. Required of all first-year clinical students.

Prerequisite: Clinical psychology doctoral student
Spring, 2 credits, S/U grading

PSY 604: Intervention Practicum

Exposure of the application of clinical intervention procedures.

Prerequisite: PSY 537 or PSY 538, Must be Psychology Graduate Student
Fall, 2 credits, S/U grading

PSY 605: Advanced Clinical Practicum

Exposure to the application of advanced intervention procedures.

Prerequisite: PSY 604 and Clinical psychology doctoral student
Fall and Spring, 2 credits, S/U grading

PSY 621: Seminar in Teaching Methods

Theory and pragmatics of good college teaching. Topics include lecturing, use of discussion, types of evaluation of students and teachers, factors affecting undergraduate learning, ethics, student-faculty relations, course administration, and audio-visual devices.

Prerequisites: Matriculated psychology graduate student; permission of instructor
Fall or Spring, 0-3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

PSY 620: Seminars in Selected Topics

Topics selected on the basis of the needs of the graduate program and research interests of the staff.

Prerequisite: Permission of instructor
Fall, 0-3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

PSY 610: Seminars in Selected Topics

Topics selected on the basis of the needs of the graduate program and research interests of the staff.

Prerequisite: Permission of instructor
Spring, 0-3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

PSY 611: Clinical Psychology Practicum

Qualified clinical students carry out supervised clinical responsibilities in settings approved by the faculty.

Prerequisite: Clinical psychology doctoral student
Fall and Spring, 1 credit, S/U grading

PSY 612: Professional Skills Practicum

Students enrolled in the M.A. program in Psychology may gain degree-relevant practical experience under the supervision of the program advisor. This experience may include participation in public and private agencies and organizations and experience in teaching support roles. Students are required to submit written progress reports and a final written report on their experience to the faculty sponsor and department.
PSY 696: Readings
Prerequisite: Permission of instructor
1-12 credits, S/U grading
May be repeated for credit.

PSY 698: Research
Prerequisite: Permission of instructor
1-12 credits, S/U grading
May be repeated for credit.

PSY 699: Dissertation Research on Campus
Dissertation research under direction of advisor.
Prerequisite: Advancement to candidacy (G5).
Major portion of research must take place on SBU campus, at Cold Spring Harbor, or at the Brookhaven National Lab.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

PSY 700: Dissertation Research off Campus - Domestic
Prerequisite: Must be advanced to candidacy (G5).
Major portion of research will take place off-campus, but in the United States and/or U.S. provinces. Please note, Brookhaven National Labs and the Cold Spring Harbor Lab are considered on-campus. All international students must enroll in one of the graduate student insurance plans and should be advised by an International Advisor.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

PSY 701: Dissertation Research off Campus - International
Prerequisite: Must be advanced to candidacy (G5).
Major portion of research will take place outside of the United States and/or U.S. provinces. Domestic students have the option of the health plan and may also enroll in MEDEX. International students who are in their home country are not covered by mandatory health plan and must contact the Insurance Office for the insurance charge to be removed. International students who are not in their home country are charged for the mandatory health insurance. If they are to be covered by another insurance plan they must file a waiver two weeks of classes. The charge will only be removed if other plan is deemed comparable.
All international students must receive clearance from an International Advisor.
Fall, 1-9 credits, S/U grading
May be repeated for credit.

PSY 800: Full Time Summer Research
0 credits, S/U grading
May be repeated for credit.

PSY 820: Summer Teaching-CED

RUS

Russian Language and Literature

RUS 500: Reading Russian
Intensive introductory Russian for graduate students in other programs. Practice in reading and translation; Russian prose; use of dictionaries and reference materials; as much attention as possible to special problems of various disciplines.
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

RUS 504: Introduction to Cultural History
Russian cultural history focusing on recurrent values and ideas. Topics explored include issues of cultural identity, responses to the West and Asia (in such movements as Slavophilism, pan-Slavism, and Eurasian theory), gender, and ethnicity.
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

RUS 508: Russian Authors
A seminar in selected Russian authors, focusing on one or two of the following: Pushkin, Gogol, Dostoevsky, Turgenev, Tolstoy. May be repeated.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

RUS 509: Dostoevsky and the West
Dostoevsky's major texts viewed in cross-cultural perspective with particular emphasis on literary and philosophical traditions common to Russia and Europe.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

RUS 511: Studies in Literary Genres
A seminar on 19th-century Russian literature. The course deals with prose, poetry, and drama in the context of literary movements and traditions.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

RUS 513: 19th-Century Russian Literature
A seminar on 19th-century Russian literature.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

RUS 514: 20th-Century Russian Literature
A seminar in turn-of-the-century, Soviet post revolutionary, and emigre Russian literature. The course deals with prose, poetry, and drama in the context of literary movements and traditions.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

RUS 520: Russian Syntax
A course in Russian syntax and advanced grammar from various theoretical frameworks.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

RUS 550: Practicum in Teaching
Fall and Spring, 1-3 credits, S/U grading
May be repeated for credit.

RUS 599: Thesis Research
RUS 599 Thesis Research. One to six credits.
S/U grading. May be repeated for credit.
1-6 credits.
May be repeated 6 times FOR credit.

RUS 601: Studies in Cultural Genres
Explorations in different forms of Russian cultural representation offered by written texts, the arts, architecture, and popular media such as puppet theatres, the bard tradition, and cinema. Interaction among aesthetic genres will be explored with particular emphasis on the roles of literature in the other arts.
Fall 3 credits, Letter graded (A, A-, B+, etc.)

RUS 602: Literature and Theatre
The relationship of literature and theatre with specific examples taken from Russian cultural history. The stage adaptations of Stanislavsky, Meyerhold, and contemporary directors will be studied as forms of aesthetic conjunction and as responses to the social-ideological context.
Spring 3 credits, Letter graded (A, A-, B+, etc.)

RUS 603: Seminar in Cultural Theory
Studies in cultural theory with particular reference to the works of formalism, structuralism, the Tartu school of semiotics, and Bakhtinian theory.
Fall 3 credits, Letter graded (A, A-, B+, etc.)

RUS 800: Summer Research
May be repeated for credit.
SCI

Science Teacher Preparation

SCI 510: Introduction to Science Teaching
This course introduces the pre-service teacher to the requisite skills, culture, and demands of the profession. The pre-service teacher learns to design curriculum, write lesson plans, orchestrate classroom activity, probe student thinking and assess student progress within the context of a pedagogy that promotes an inquiry approach to learning. This course requires one-half day per week of clinical practice with follow-up seminar in the campus Discover Lab, out-of-class meetings with classmates, and periodic visits to local public schools.

3 credits, Letter graded (A, A-, B+, etc.)

SCI 520: Science Instructional Strategies and Techniques
In this course, the pre-service teacher builds on the pedagogical foundations set in SCI 510 and prepares for student teaching in the following semester. Greater leadership in Discover Lab programs and teaching assignments in local public schools is expected. Greater emphasis is placed on the integration of theory and practice, extension of scientific inquiry for diverse learners and assessment of student progress within the context of teaching. This course demands an inquiry into the nature of science and the nature of knowing. It requires one-half day per week of clinical practice with follow-up seminars, out-of-class meetings with classmates, and micro-teaching assignments in selected public schools. Prerequisite: SCI 510, entrance interview with the Science Education Committee; 3.0 cumulative graduate GPA; matriculation in degree (MAT, MS, Ph.D or MA/LS) program; permission Science Education program 631.632.7075 Remark:

3 credits, Letter graded (A, A-, B+, etc.)

SCI 530: Applied Research in Educational Settings
This course offers the pre-service teacher the opportunity to conduct a place of original research that will inform future practice. With guidance from the PEP faculty and/or affiliated departmental faculty, pre-service teachers will formulate a question, design a protocol, collect data and analyze within research traditions appropriate to the question.

3 credits, Letter graded (A, A-, B+, etc.)

SCI 540: Clinical Experience and Action Research
Within this course, students will engage in weekly clinical practice experiences in campus teaching labs, outreach programs or regional schools. In addition, students will design, implement, and present an action research project. This course is intended to be taken as a two-semester co-requisite of SCI 510 and SCI 520.

3 credits, Letter graded (A, A-, B+, etc.)

SCI 552: Supervised Student Teaching Middle School Grades 7-9: Science
Prospective science teachers will participate in a supervised student teaching experience in selected Long Island secondary schools, grades 7-9. The student teacher reports to the school to which he/she is assigned each full school day. Frequent consultation with the supervising teacher helps the student interpret and evaluate the teaching experience. Applications must be filed in the semester preceding student teaching. Prerequisite: SCI 510, 520, 541, 542 CEE 505 and CEE 565; matriculation in degree (MAT, MS, Ph.D or MA/LS) program, 3.0 cumulative GPA; submission of portfolio and interview with and permission of Science Education Committee 631.632.7075

3 credits, S/U grading

SCI 554: Supervised Teaching of Science Seminar
This seminar, which will focus on problems encountered by student teachers and public school teachers at the secondary level, will include study and analysis of science teaching issues, including classroom management, school culture, and social issues affecting the schools and student performance. Prerequisite: SCI 510, 520, 541, 542, CEE 505 and CEE 565; submission of portfolio and interview with and permission of Science Education Committee 631.632.7059; matriculation in degree (MAT, MS, Ph.D or MA/LS) program; completion of any content area deficiencies

3 credits, Letter graded (A, A-, B+, etc.)

SLV

Slavic Languages and Literature

SLV 501: Special Topics in Slavic Literature
Special topics in Slavic literature investigating an author, period, genre, or theoretical issue. Designed to provide a forum for advanced research in critical methodology.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

SLV 502: Problems of Literary Translation
The course addresses theoretical and practical problems of translation from the Slavic languages. Published translations of literary texts as well as translations prepared by participants of the seminar will be compared and analyzed.
Prerequisite: Advanced knowledge of Slavic languages.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

SLV 571: Comparative Slavic Linguistics
An investigation of the major West, East, and South Slavic languages with particular attention to their historical development. The course includes comparative and contrastive studies in the areas of phonology, morphology, and syntax.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

SLV 578: Directed Independent Studies
Fall
May be repeated for credit.

SLV 579: Directed Independent Studies II
Spring
May be repeated for credit.

SLV 580: Special Topic in Slavic Languages I
The study of the phonology, morphology, and syntax of a Slavic language other than Russian, e.g., Polish, Czech, Ukrainian, Serbo-Croatian, or Bulgarian. May be repeated if different language studied.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

SLV 581: Special Topic in Slavic Languages II
A continuation of the study of a Slavic language other than Russian. May be repeated if different language is studied.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

SLV 582: Language Proficiency
Second language acquisition for M.A., M.A.T. and Ph.D. candidates from other Programs.

Fall, 1-6 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

SOC 501: Multivariate Statistics for Social Science
This course is an advanced treatment of descriptive and inferential statistics with emphasis on the latter. Students will gain practical experience in analyzing current data from the social sciences through the use of statistical computer programs. Topics include: sampling, measures of central tendency and dispersion, probability theory, hypothesis testing, point and interval estimation, the normal, binomial, and chi-square distributions, parametric and non-parametric measures of association and correlation, and bi-variate regression.

3 credits, Letter graded (A, A-, B+, etc.)

SOC 502: Multivariate Regression Techniques
This course provides an in-depth overview of regression analysis, primarily focused on OLS modeling. Topics include: inferences in regression analysis, dummy variables, interaction terms, and diagnostics and remedial measures. The course concludes with an introduction to other regression techniques such as logistic and probability modeling.

3 credits, Letter graded (A, A-, B+, etc.)

SOC 504: Logic and Practice of Sociology
This course provides an introduction to the logic of empirical research in sociology. It takes a broad overview of both quantitative and qualitative methods: inductive and deductive reasoning and the process of theory construction and testing, with an emphasis on research design and the logic of causal analysis. A knowledge of advanced statistics is not assumed. Topics covered include survey research, participant observation and field methods, the comparative method, experimental and quasi-experimental design, content analysis, and the logic of multivariate analysis.

3 credits, Letter graded (A, A-, B+, etc.)

SOC 505: Classical Sociological Theory
A review of the intellectual development of the discipline, its epistemological foundations, and classical theoretical statements.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

SOC 506: Contemporary Sociological Theory
A review of the current major theoretical orientations and newly developing theoretical perspectives.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

SOC 509: The Practice of Ethnography
This course has four major objectives: (1) to become familiar with contemporary ethnographies; (2) to acquaint students with the methodological literature on qualitative sociology; (3) to consider theoretical and epistemological issues in qualitative research; and (4) to put some data production techniques (observant participation, in-depth interviews, and life stories) into practice.

This course is co-scheduled with WST 610.
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated 2 times FOR credit.

SOC 510: Historical Methods in Sociology
Major approaches, philosophical problems of, and methods used in historical sociology. Topics covered include causal analysis, macrosociological comparisons, case-oriented versus variable-oriented approaches, ideal types, comparative typologies, narrative, and issues of significance and objectivity. Special attention is given to the problem of concept formation.

3 credits, Letter graded (A, A-, B+, etc.)

SOC 512: Global Sociology, Identities and Organizations in Global Perspective
This course examines how increasing global integration impacts human societies. It reviews the broad trends that foster globalization in the economic, political, cultural, and social spheres, as well as the consequences of global change has had on how individuals and communities identify themselves and how they organize for collective goals. Core issues on the global agenda such as conflict, environment, technological and economic development, demographic change, gender, and human rights will be addressed; research methods for the study of global society will be introduced.

3 credits, Letter graded (A, A-, B+, etc.)

SOC 514: Advanced Topics in Global Sociology
This course provides an advanced treatment of major topics and debates in the increasingly globalized social sciences. The course is based on research activities of the faculty and students. Topics may include global inequality; globalization and gender; sociology of human rights; war and revolution; transnational social movements; comparative political economy; globalization and immigration; globalization and work; issues in global culture.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

SOC 516: Social Inequality
Causes, consequences, and explanations of a prevailing social, political, and economic
phenomenon. The course assesses long-run trajectories of inequalities in their various forms and dimensions, and analytically and theoretically considers the topic at the local, national, and global levels.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated 2 times FOR credit.

SOC 518: Sociology of Gender
This course will familiarize students with the field through a broad survey. Topics include theoretical debates about construction of gender identity, conceptual and empirical issues in the study if gender dynamics and empirical studies of the way gender constituted by social institutions such as family, education, workplace, and media.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated 2 times FOR credit.

SOC 519: Advanced Topics in Gender Studies
This advanced course will continue the discussion of the graduate seminar on Sociology of Gender, by examining theoretical debates or controversies, examining specific gender identities, examining the gender of a specific institution (i.e., labor, law), and the gendered dynamics of social interaction (in for example, romantic relationships or sexuality).

Co-scheduled with WST 602.
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated 2 times FOR credit.

SOC 521: Social Psychology
An analysis of the three major domains of social psychology: (1) symbolic interactionism with a focus on the topic of identity; (2) psychological social psychology with a focus on the topics of personal perception and attitudes; and (3) social structure and personality with a focus on the topics of norms, roles and socialization.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated 2 times FOR credit.

SOC 523: Sociology of Education
Relationships between education and other institutions. Internal dynamics of the school and the classroom.

3 credits, Letter graded (A, A-, B+, etc.)

SOC 531: Economic Sociology
This course reviews the fundamental principles of economic sociology and looks carefully at the main areas of research in the resurgence that began in the 1970's. The course covers classic texts and considers key areas that have animated the field in the recent era. Subjects would include the rise of the large corporation, ownership and control debate (including the overlapping issues of corporate interlocks and finance capital), the issue of markets and transactions costs, the development of the embeddedness perspective, labor markets and the nature and extent of globalization.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated 2 times FOR credit.

SOC 532: Organizations
This course will review classic and current research in the area of organizations. It will cover internal dynamics of organizations, beginning with classic Weberian theory, and continue by reviewing contemporary approaches to human relations theory. It will address key debates about the dynamics of management-worker relations, and it will scrutinize the debate of corporate control. Also it will survey the literature on interorganizational relations and dynamics, such as interlock research to new institutionalism.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated 2 times FOR credit.

SOC 538: Sociology of Development
This course will familiarize students with the field through a broad survey. Topics include theoretical debates about construction of gender identity, conceptual and empirical issues in the study if gender dynamics and empirical studies of the way gender constituted by social institutions such as family, education, workplace, and media.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated 2 times FOR credit.

SOC 556: Political Sociology
A comparative and historical study of political sociology by social institutions such as family, education, workplace, and media. The relations between social structure, social change, and the development of major art forms.

3 credits, Letter graded (A, A-, B+, etc.)

SOC 566: Funding and Grant Writing in Sociology
This course will provide students with the skills necessary to write grant proposals for both government and private agencies. The main requirement will be to prepare a proposal suitable for submission to a particular agency that funds the kind of research the student plans to do.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated 2 times FOR credit.

SOC 568: Dissertation Seminar
Under the direction of the seminar leader, students help one another (1) prepare for the Preliminary Specialty Field Exam (which includes putting together a reading list) and (2) work on a dissertation proposal and its defense. The details of selecting a dissertation committee and writing a dissertation are also explored.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated 2 times FOR credit.

SOC 590: Independent Study
Intensive reading, under supervision of one or more instructors, of material not covered in the formal curriculum.

1-12 credits, S/U grading
May be repeated for credit.
covered: Cultural Theory; Sociology of Technology; Micro-sociology; Advanced Topics in Marxist Theory; Sociology of Emotions; Historical Methods; Ethnic Relations; Biosociology; Comparative Stratification; Max Weber; Sociology of the Future; Science of Sociology and Everyday Life; The Study of the World's Advanced Societies; Methods of Behavioral Observation; Social Structure; Sociology of the Family; Cognitive Sociology; Sociology of Work; Transnational Social Movements; Economic Sociology; War and Revolution; Sociology of Gender; Sociology of Culture; Development of Capitalism; Film as a Sociological Research Tool; Funding and Grant Writing; The Three Faces of Social Psychology; A Structural Approach to Organizational Behavior; Professionals and Professionalism; Sociology of Modernity; Globalization and Immigration; Research Support in Sociology; Sociology of Sexual Behavior; Global Sociology; Gender and the Law; Poverty and Homelessness.

3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

SOC 595: Special Seminars
Topics to be arranged. The seminar is built around actual research activities of students and faculty. The following topics have been covered: Cultural Theory; Sociology of Technology; Micro-sociology; Advanced Topics in Marxist Theory; Sociology of Emotions; Historical Methods; Ethnic Relations; Biosociology; Comparative Stratification; Max Weber; Sociology of the Future; Science of Sociology and Everyday Life; The Study of the World's Advanced Societies; Methods of Behavioral Observation; Social Structure; Sociology of the Family; Cognitive Sociology; Sociology of Work; Transnational Social Movements; Economic Sociology; War and Revolution; Sociology of Gender; Sociology of Culture; Development of Capitalism; Film as a Sociological Research Tool; Funding and Grant Writing; The Three Faces of Social Psychology; A Structural Approach to Organizational Behavior; Professionals and Professionalism; Sociology of Modernity; Globalization and Immigration; Research Support in Sociology; Sociology of Sexual Behavior; Global Sociology; Gender and the Law; Poverty and Homelessness.

3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

SOC 598: Research
Execution of a research project under the supervision of one or more faculty members.

1-12 credits, S/U grading
May be repeated for credit.

SOC 603: Advanced Topics in Quantitative Analysis
Mathematical and statistical methods in the analysis of quantitative data.

3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

SOC 604: Advanced Topics in Qualitative Analysis
The use of personal documents, official records, field observations, and interviews.

3 credits, Letter graded (A, A-, B+, etc.)

SOC 691: Practicum for Teaching and Graduate Assistants
Individualized supervision of initial (first two semesters) teaching assistance. Discussion, examination construction, student consultation, and grading. Register for section of supervising instructor.

3 credits, S/U grading

SOC 692: Practicum in the Teaching of Sociology
The exploration of teaching goals, processes, and outcomes. Practice lectures are videotaped and discussed; classroom visits; planning, outlining, selection of course material; writing of syllabus for Introductory Sociology section to be taught as part of SOC 693 in following semester.

3 credits, Letter graded (A, A-, B+, etc.)

SOC 693: Practicum for Graduate Teaching Interns
Supervised teaching of a section of Sociology 105 using the outlines, materials, and techniques developed in SOC 692. Includes weekly meetings of all persons registered for SOC 693 and observation of classes by both faculty and fellow graduate students.

3 credits, Letter graded (A, A-, B+, etc.)

SOC 699: Dissertation Research on Campus
Dissertation research under direction of advisor.

Prerequisite: Advancement to candidacy (G5).

Major portion of research must take place on SBU campus, at Cold Spring Harbor, or at Brookhaven National Lab.

Fall, 1-9 credits, S/U grading
May be repeated for credit.

SOC 700: Dissertation Research off Campus - Domestic
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place off-campus, but in the United States and/or U.S. provinces. Please note, Brookhaven National Labs and the Cold Spring Harbor Lab are considered on-campus. All international students must enroll in one of the graduate student insurance plans and should be advised by an International Advisor.

Fall, 1-9 credits, S/U grading
May be repeated for credit.

SOC 701: Dissertation Research off Campus - International
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place outside of the United States and/or U.S. provinces. Domestic students have the option of the health plan and may also enroll in MEDEX. International students who are in their home country are not covered by mandatory health plan and must contact the Insurance Office for the insurance charge to be removed. International students who are not in their home country are charged for the mandatory health insurance. If they are to be covered by another insurance plan they must file a waiver by second week of classes. The charge will only be removed if other plan is deemed comparable.

All international students must receive clearance from an International Advisor.

Fall, 1-9 credits, S/U grading
May be repeated for credit.

SOC 800: SUMMER RESEARCH
May be repeated for credit.

SPN

Hispanic Languages and Literature

SPN 500: Reading Spanish
Through an intensive study of language structures and idiomatic usage, with extensive practice in written translation of literary and scholarly texts, candidates for advanced degrees are able to obtain the proficiency level of the graduate Spanish reading requirement. Several programs grant exemption from further examination for successful completion of this course (not for M.A. or Ph.D. candidates in Spanish).

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

SPN 501: Historical Linguistics
General processes of language change, as exemplified by the development of the Romance languages, with particular reference to Spanish.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

**SPN 502: Methods in Linguistics Research**
Methods for elicitation and collection of linguistic data and their analysis. Relation between theory and research design, and between qualitative and quantitative analysis. Introduction to commonly used tests of statistical significance, and to reasoning and argumentation from limited data.
Prerequisite: Permission of instructor
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

**SPN 503: Spanish Linguistics**
Major issues related to the general structure of the Spanish language (phonetics, phonology, morphosyntax, semantics, etc.)
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

**SPN 504: Contrastive Analysis: Spanish and English**
Topics vary, and may include linguistic interference and its basis and manifestations, in-depth discussion of specific syntactic/semantic areas with reference to possible Spanish/English interference, major phonological differences between Spanish and English and consequent learning difficulties, and nonlinguistic factors that may affect learning in different groups in different situations.
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

**SPN 505: Hispanic Dialectology and Sociolinguistics**
Major theoretical issues involved in analysis of geographical and social variation and with the principal methods used in its investigation, as applied to varieties of Spanish, Portuguese, Catalan, and Galician.
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

**SPN 506: Bilingualism**
This course aims to provide an introduction to the study on the phenomenon of bilingualism, both at the individual and at the societal level. We will discuss the nature of bilingual competence, theories of the representation/storage of bilingual knowledge, the acquisition/learning of multiple languages. Finally, we will examine social attitudes towards bilingualism and the consequences of language contact, and bilingual education policies and their effects.
3 credits, Letter graded (A, A-, B+, etc.)

**SPN 507: Phonetics and Phonology of Spanish**
This course introduces the phonetics and phonology of Spanish. Through the course, the students will be able to learn about the basic phonological (supra-)segmental units that form the sound system of the Spanish language as well as their acoustic and articulatory properties.
Offered
Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)

**SPN 508: Spanish Morphology**
Morphology is the study of the word and its internal structure. In this course we will study the generalization contained inside words of Spanish. The student will be introduced to the general concepts current in modern morphological theories. Some of the more specific topics will be how new words are created and derived.
Offered in
Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)

**SPN 509: Spanish as Second Language Acquisition**
The purpose of this course is to provide a framework on how language development in bilingual individuals is different from that of monolinguals. How people learn their first language (L1) and how they learn their second language (L2) and the relationship between the two languages. We will try to reach the theoretical questions about the presence of a second language in the same mind as a first language and how this pre-existing language affects the L2 user's mind. Finally, we will understand at the differences and similarities that have been proposed between L1 and L2 acquisition.
Offered
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**SPN 510: Hispanic Culture**
An introduction to the essential aspects of Peninsular and, or Latin American cultures and civilizations, designed to provide incoming graduate students with sufficient background to undertake the advanced study of Hispanic languages and literature.
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

**SPN 511: Studies in Modern Spanish**
The critical analysis of selected themes in Spanish and/or Latin American culture and society as represented across different discourses and disciplines including literary and cultural studies, film and media, documentary and historical sources.
Offered in
Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

**SPN 512: Interdisciplinary Approaches to Hispanic Studies**
The critical analysis of selected themes in Spanish and/or Latin American culture and society as represented across different discourses and disciplines including literary and cultural studies, film and media, documentary and historical sources.
Offered in
Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

**SPN 513: Spanish Grammer**
The student will be introduced to important concepts in the study of grammar and syntax of Spanish in view of modern linguistic theories about our language facility. This course also will describe the grammar of Spanish spoken in Spain and Latin America.
Offered in
Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)

**SPN 514: Spanish Grammer**
The student will be introduced to important concepts in the study of grammar and syntax of Spanish in view of modern linguistic theories about our language facility. This course also will describe the grammar of Spanish spoken in Spain and Latin America.
Offered in
Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)
Major literary works of the 19th and 20th centuries will be read and analyzed in depth in relation to their broader cultural and historical content.

Offered in
Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

**SPN 551: Early Latin American Literature and Culture**

An introduction to the analysis of major works and concepts of the colonial period and their relevance for contemporary debates in Latin American literary and cultural studies.

3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

**SPN 573: Studies in Modern Latin American Literature**

Major literary works of the 19th and 20th centuries will be read and analyzed in depth in relation to their broader cultural and historical context.

Offered in
Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

**SPN 582: The Hispanic Tradition in the United States**

A general historical analysis of the influence of Hispanic culture in the United States as a consequence of the continuous interaction between Spanish- and English-speaking people. Special attention is given to cultural manifestation in a bicultural setting.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

**SPN 585: Caribbean Literature**

A course devoted to major writers and works of the Caribbean area. Readings will be analyzed in relation to cultural contexts.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

**SPN 588: Directed Master’s Research**

For work toward the M.A. thesis or preparation for the M.A. comprehensive examination only. This course is mainly intended for students who are not continuing toward the Ph.D.

Prerequisite: Permission of graduate program director, M.A. thesis director, and, or director of the M.A. comprehensive examination committee.

Fall and Spring, 1-6 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

**SPN 595: Directed Independent Individual Studies**

For M.A. and Ph.D. candidates only. Requires a written proposal signed by the faculty member involved and the approval of the graduate program director and the departmental chairperson. No more than a total of nine credits may be applied toward a Spanish graduate degree or combination of degrees.

Prerequisite: Permissions mentioned above
Fall and Spring, 1-6 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

**SPN 609: Literary Theory**

A study of the most outstanding methods of analysis and literary research, and a survey of major works pertaining to the study of literature. A required course for students in the Spanish Ph.D. program.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

**SPN 610: Topics Seminar**

A seminar course designed primarily for doctoral students. The topic will be chosen by the professor from any of the major areas of Hispanic literature and linguistics required of all Ph.D. students. Ph.D. students must take from two to four of these seminars depending on their previous preparation.

Prerequisite: Admission to the Spanish Ph.D. program or permission of instructor
Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

**SPN 612: Medieval Literature**

Major literary works of the medieval period will be read and discussed in depth, and their interrelation with the cultural context analyzed.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

**SPN 628: Cervantes**

Miguel de Cervantes’ works are read, analyzed, and discussed in depth. A required course for Ph.D. students. Advanced D.A. and M.A. students are accepted.

Prerequisite: M.A. degree or permission of instructor
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

**SPN 641: 19th-Century Spanish Literature until the Generation of 1898**

May be repeated for credit.

**SPN 643: 20th-Century Spanish Literature**

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

**SPN 652: Colonial Spanish-American Literature**

Major authors and literary works of the period. Readings will be analyzed and discussed in depth, and their interrelation with the cultural context explored.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

**SPN 662: 19th-Century Spanish-American Literature**

Major authors and literary works of the period. Readings will be analyzed and discussed in depth, and their interrelation with the cultural context will be discussed.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

**SPN 669: Spanish-American Modernism**

A course devoted to major authors and literary works of the modernistic period (1880-1916) in Spanish America. Readings are analyzed and discussed. A required course for Ph.D. students. Advanced D.A. and M.A. students are accepted.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

**SPN 671: 20th-Century Spanish-American Literature**

A course devoted to major authors and literary works of the period. Readings will be analyzed and discussed in depth, and their interrelation with the cultural context discussed.

3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.
SPN 681: Directed Readings
For students who have completed all doctoral requirements and wish to dedicate themselves to full-or part-time preparation for the comprehensive examination.
Prerequisite: Coursework toward the Ph.D. must be completed; permission of the dissertation director, graduate studies director, or department chairperson.
Fall and Spring, 1-9 credits, S/U grading.
May be repeated for credit.

SPN 691: Practicum in the Teaching of Spanish Language
Prerequisite: Permission of instructor, department chairperson, or graduate program director.
Fall, 3 credits, Letter graded (A, A-, B+, etc.).

SPN 693: Practicum in the Teaching of Spanish Language
This course is to be taken in conjunction with the student's teaching assignment. Each week's discussion centers on problems of applied linguistics or grammar. Discussion will also be focused on methodology (audio-lingual method, pattern drills, language laboratory, and preparation of examinations).
Fall and Spring, 3 credits, S/U grading.
May be repeated for credit.

SPN 699: Dissertation Research on Campus
For students who have already passed the Ph.D. comprehensive examination and need to devote their time to preparation of their dissertation.
Prerequisites: Ph.D. comprehensive examination completed and advanced to candidacy (G5); permission of the dissertation director, graduate program director, or department chairperson. Major portion of research must take place on SBU campus at Cold Spring Harbor, or at the Brookhaven National Lab.
Fall, 1-9 credits, S/U grading.
May be repeated for credit.

SPN 700: Dissertation Research off Campus - Domestic
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place off-campus, but in the United States and/or U.S. provinces. Please note, Brookhaven National Labs and the Cold Spring Harbor Lab are considered on-campus. All international students must enroll in one of the graduate student insurance plans and should be advised by an International Advisor.
Fall, 1-9 credits, S/U grading.
May be repeated for credit.

SPN 701: Dissertation Research off Campus - International
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place outside of the United States and/or U.S. provinces. Domestic students have the option of the health plan and may also enroll in MEDEX. International students who are in their home country are not covered by mandatory health plan and must contact the Insurance Office for the insurance charge to be removed. International students who are not in their home country are charged for the mandatory health insurance. If they are to be covered by another insurance plan they must file a waiver be second week of classes. The charge will only be removed if other plan is deemed comparable.
All international students must received clearance from an International Advisor.
Fall, 1-9 credits, S/U grading.
May be repeated for credit.

SPN 800: Summer Research
May be repeated for credit.

THR

Theatre Arts

THR 500: Introduction to Graduate Study in Dramaturgy
This course surveys the field of theatre scholarship, introducing students to research tools, research methods, critical writing, and scholarly values. Discussions include reference to basic texts in dramatic literature and representative research problems.
Prerequisite: Admission to graduate program.
Fall, 3 credits, Letter graded (A, A-, B+, etc.).

THR 505: Dramaturgy I: Production Dramaturgy
An introduction to production dramaturgy in which students explore the types of research and concept development necessary to prepare already produced scripts for performance. Research tools and methods, investigations of cultural and social history, critical writing, and issues in adaptation and translation are discussed. Means of facilitating communication within a production team and between actors, designers, and directors are examined. Other topics include season planning, promotion and publicity, educational outreach materials, preparation of protocols, post-play discussion, and other audience development techniques.
Prerequisite: Permission of instructor.
Fall, 3 credits, Letter graded (A, A-, B+, etc.).

THR 506: Dramaturgy II: Literary Management
Examining the roles of the literary manager in the contemporary theatre, this course explores the process of new play development and the preparation of a new play for production. The ability to read and write sensitively about new plays, reading new plays and preparing sophisticated play reports, how to talk to playwrights about their plays, and how to facilitate discussions with directors and actors as they encounter a play for the first time are issues examined in this course. New plays from a variety of venues, including professional theatres in New York City, are read and discussed, and the process of developing new plays from staged readings through public performances are studied.
Prerequisite: Permission of instructor.
Spring, 3 credits, Letter graded (A, A-, B+, etc.).

THR 507: Dramaturgy of Process: New Play Development Workshop
This course for advanced students of Dramaturgy allows them to apply practical theatre skills to the development of new work. Students will assist in the workshop production of a new play. This will explore NPD process as it exists in the American Regional Theatre, and learn the practical skills of running a play-reading series, commissioning new plays, communicating with playwrights, casting and marketing.
3 credits, Letter graded (A, A-, B+, etc.).

THR 510: Western Theatre History
Theatre forms in the Western tradition, from ancient to modern. This course is centered on a particular critical or theoretical problem or theme. It may be repeated as an independent study with the permission of the instructor.
3 credits, Letter graded (A, A-, B+, etc.).
May be repeated for credit.

THR 511: Far Eastern Theatre and Drama
Course surveys the traditional theatre of three Far Eastern (China, Korea, and Japan) as related to: its history, dramatic literature (Yuan drama and Beijing Opera of China; Pongsan Korean Masked Dance-Drama; a Noh play cycle, Kabuki, and Joruri Puppet Theatre of Japan), point of departure will be: the Eastern world view (namely Shenanism, Confucianism, Daoism, and Buddhism) and
GRADUATE COURSE DESCRIPTIONS

Fall 2011

theatre; the concept of the actor's body and mind as a microcosmic presentation of a macrocosmic universe; his performance as an act of becoming one with the macrocosm; and the total nature of all performing arts elements harmoniously operating together in creating beauty on stage.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated 2 times FOR credit.

THR 520: Western Dramatic Literature
Course surveys forms of Western drama, with particular reference to theatrical performance. Focus is placed on key periods and themes such as gender issues, political violence, death and dying, love, etc. May be repeated once.
Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated 2 times FOR credit.

THR 521: South and Southeast Asian Theatre and Drama
Surveying the traditional and modern theatre of South and Southeast Asian (India, Sri Lanka, Thailand, Indonesia, Tibet, Nepal, and Bhutan) as related to: it's mythic origins, history, dramatic literature, aesthetic theory, ritual functions, conventions of productions and actor training. The point of departure will be cosmology, especially that of Hinduism, and world view of the people.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated 2 times FOR credit.

THR 523: Theatre in New York
A workshop seminar on contemporary, alternative performance forms and mainstream theatre. Emphasis on the development of critical perspectives and the writing skills needed to articulate them through seminar discussions and writing workshops relevant to performances seen on trips to theatres in New York and the region.
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

THR 525: Topics in Theatre and Drama
Intensive studies of selected forms of theatre and drama from various countries and periods, designed to supplement rather than repeat areas of study already undertaken in the curriculum. May be repeated.
Prerequisite: Permission of instructor
Fall or Spring, 1-3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

THR 530: Directed Reading in Theatre and Drama
Students read and evaluate the literature on a topic of special academic interest under the supervision of a faculty member. May be repeated.
Prerequisite: Permission of instructor
Fall and Spring, 1-3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

THR 535: Theories of Theatre
Theories of the theatre, from the ancient to the contemporary, are read critically to develop a complex and varied conception of the philosophical basis underlying approaches to the theatre. Theorists read might include Aristote, Plato, Diderot, Rousseau, Nietzsche, Artaud, Brecht, Stanislavski, Grotowski, Barba, Mnouchkine, Suzuki, and Zeami.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

THR 540: Design Theory and Practice
Course surveys principal design areas, providing information about aesthetic theory and methods of stage design. Students address design problems and analyze a topic in design theory in conjunction with readings and instruction.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

THR 550: Teaching Seminar
Supervised student teaching of undergraduate courses accompanied by a seminar in methods and strategies of teaching theatre arts at the University level. An independent teaching project, in which the student works with a particular faculty member, may be substituted.
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

THR 560: Acting Theory and Practice
Course surveys the field of acting-its history, formal principles, primary techniques, and contemporary practice. Students develop course papers and, or projects in conjunction with advanced readings and instruction.
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

THR 570: Directing Theory and Practice
Course surveys the art and craft of the Director, with focus on contemporary practices of directing and approaches to pedagogy. Students will write papers and develop projects in conjunction with advanced reading and instruction.
3 credits, Letter graded (A, A-, B+, etc.)

THR 575: Adaptation Workshop
This course is an intense examination of a playwright or group of plays with the object of preparing a new adaptation or stage version. The course will study a text or group of texts, important criticism, notable or significant translation and/or adaptations, stage productions and/or film versions. Students will submit an outline or rough draft of their new version at the end of the course.
Offered in
Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

THR 589: M.F.A. Thesis
Independent study and research for M.F.A. students, on practical or theoretical topics related to the field of dramaturgy. Development of materials for this research paper may be related to the students M.F.A. Project or other dramaturgical pursuits.
3 credits, SU grading
May be repeated for credit.

THR 590: M.A. Thesis
Independent study and research for M.A. students, on special topics, theoretical or cultural issues, or problems. Development of material for research paper.
1-3 credits, SU grading
May be repeated for credit.

THR 591: Independent Project
Special project allowing advanced individual work in an area of theatre study or practice. Must be scheduled by arrangement with instructor. Should result in an advanced paper or project report. May be repeated.
1-3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

THR 625: Theory and Criticism
Study of major issues in dramatic theory and criticism in performance theory. May be repeated for up to six credits with instructor's permission.
Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated 2 times FOR credit.

THR 630: Dramaturgy Colloquium
Through interaction with theatre professionals, students develop independent projects around topics of common concern to the profession, and develop strategies for implementing alternate plans for improving and developing theatre. May be repeated.
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

THR 635: Theories of Performance

Stony Brook University Graduate Bulletin: www.stonybrook.edu/gradbulletin 149
This course examines different theories of performance as they relate to theatre and everyday life. Students explore ways of thinking about the performing body and different modes of cultural expression. There is a performing component to the course in addition to a final paper.

THR 650: Playwrighting Workshop

May be repeated 2 times FOR credit.

THR 640: Theatre Design Workshop

Advanced assignments in theatre design.

THR 630: Topics in Performance Studies

The history and theories of performance are explored. Seminars may focus on the performing body, performance and political change, avant-garde performance, performing and cognitive science, virtual performance, performance and identity. Depending on the topic, there may be a performance component and/or computer based projects.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

May be repeated for credit.

THR 638: Directing I - Principles of Directing

This course will focus on the analytical, organizational and creative processes necessary to be a director. Topics include: the role of the director and the collaborative process; the history of directing; script analysis and interpretation/concept; stage, space and composition; visual interpretation and working with designers; casting and working with actors; working with dramaturges; and rehearsal and technical process.

Offered
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

THR 639: Directing II - Advanced Directing

This course will build upon the work covered in Directing I and will focus on advanced problems in Directing, including advanced scene work, period styles, alternative forms, and the challenges of contemporary drama and alternative performance.

Prerequisite: THR638
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

THR 640: Theatre Design Workshop

Advanced assignments in theatre design. May include design work on departmental productions. May be repeated once.

Prerequisite: Permission of instructor
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

May be repeated 2 times FOR credit.

THR 650: Playwrighting Workshop

Students write and discuss original plays, evaluate their work, study techniques of composition and formal organization, and develop strategies for audience communication. Advanced students may study techniques for revision and the development of material for performance. Some plays may be selected for department production.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

THR 651: Playwriting Workshop II

With the instructor of record, the student will develop a plan for addressing problems or the boundaries of approaches to creative work specific to his or her needs for continued development as a playwright. As deemed appropriate by the instructor, the student will work on a full length or one-act play or scenes.

Offered in
Fall, 3 credits, S/U grading
May be repeated for credit.

THR 660: Acting Workshop

Intensive advanced study in a particular acting technique, such as Kutiyyamat, Suzuki, musical theatre, Brecht, etc. Offered in conjunction with departmental productions. May be repeated.

Prerequisite: Permission of instructor
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

May be repeated for credit.

THR 670: Directing Workshop

Advanced training in directing, which may involve concentrated scene work, formal experiments in performance, work on period styles and problems, or preparation of performances for public showing. May be repeated once.

Prerequisite: Permission of Instructor
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

May be repeated 2 times FOR credit.

THR 680: Dramaturgy Workshop

Students serve as dramaturgs for the production of a play, providing research support, studying editorial and interpretive techniques, attending rehearsals, and developing program materials for the audience.

Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)

May be repeated for credit.

THR 690: Professional Internship

A full-term internship at a professional theatre. Students should submit an internship description in the first month of work, then a journal or evaluation of their work experience.

Prerequisite: Permission of graduate studies director
Spring, 3 credits, S/U grading

THR 691: M.F.A. Project

The project is to be undertaken at a professional theatre or as part of the mainstage production season at Stony Brook University. Students submit a proposal for a project in which they have a major responsibility as an assistant dramaturg on a production or an equivalent position. All proposals for projects outside of the university must be submitted in writing to the faculty supervisor and graduate program director for approval.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

THR 692: M.F.A. Thesis

Independent study and research for M.F.A. students, on special topics, theoretical or cultural issues, or problems. Development of material for research paper.

1-3 credits, S/U grading
May be repeated for credit.

THR 800: Summer Research

Independent study and research on special topics or problems related to work on the M.A. or M.F.A. degree. May be repeated.

S/U grading
May be repeated for credit.

THR 850: Summer Teaching

Supervised student teaching of undergraduate courses accompanied by a tutorial in methods and strategies of teaching theatre arts at the University level.

S/U grading

TMP Technology Management Prog

TMP 541: MANAGERIAL ECONOMICS

The techniques and approaches of microeconomic reasoning are applied to issues of managerial decision making in the corporation. The theory of the market and the price system are closely examined for the purpose of identifying those areas where neoclassical economics is helpful to the analyst and manager. Special attention is paid to cost-benefit analysis and models of economic behavior. Summer

1.5 credits, Letter graded (A, A-, B+, etc.)

TMP 542: International Business, Technology and the Economy

International trade and investment in technology-intensive fields is examined from
the perspective of economic theory. Theories of foreign direct investment and international competitive advantage will be examined in the context of the changing global economy.

Summer
1.5 credits, Letter graded (A, A-, B+, etc.)

TMP 543: Leadership, Team Effectiveness and Communication
This course focuses on business leadership, teamwork and communications. It seeks to answer the following three questions: What do leaders really do? What makes teams effective? How do you create persuasive communications? The course addresses such topics as power and influence, leading organizational change, managing corporate crises, building motivated teams, and developing strategic communications. It examines these topics with a goal of not only imparting knowledge about these managerial practices but also assisting students to acquire the skills necessary to become business leaders, team builders and articulate communicators. We will seek to bridge theory and managerial practice by using case studies and inviting business executives to the class. The readings for the course come largely from Harvard Business Review articles and case studies on these topics.

Spring, 1.5 credits, Letter graded (A, A-, B+, etc.)

TMP 544: Organizational Behavior
An approach to understanding the behavior of individuals in organizations is developed with emphasis on implications for effective management. This approach is used to analyze decision problems encountered in managing human resources. Topics include individual and group decision-making skills, recruitment and selection, employee ability, motivation and incentive systems, job satisfaction, performance assessment and management, retention, training, and employee development.

Summer, 1.5 credits, Letter graded (A, A-, B+, etc.)

TMP 545: Basic Financial Accounting
Introduction to financial accounting which includes the accounting cycle, analysis and preparation of financial statements, cash flow analysis, corporate accounting, investment in stocks, and international transactions.

Summer, 1.5 credits, Letter graded (A, A-, B+, etc.)

TMP 546: Managerial Accounting for High Technology Organizations
Development and presentation of accounting information for managerial decision making in a global technological environment. Topics include budgeting, forecasting, profit analysis and planning, performance evaluation, transfer pricing, capital budgeting, performance measurement, and cost control. Special emphasis will be given to accounting issues pertinent to high technology companies, such as valuation of intangible assets.

Summer
1.5 credits, Letter graded (A, A-, B+, etc.)

TMP 547: Industry Project
The class provides students with the opportunity to apply the analytic skills they have learned in the classroom to actual management problems. The class will visit various American businesses to learn about the operation, marketing, and financing of the business. Students will be divided into working groups and each group will examine problems in the businesses based on discussions with the managers of various companies visited. Students will recommend solutions to the problems presented by the management. Each group will write a report and make a presentation of their project.

Summer, 1.5 credits, Letter graded (A, A-, B+, etc.)

TMP 548: Ethics, Corporate Governance and Control Systems
This course explores the values that govern corporate behavior. Topics include understanding ethical behavior, corporate ethics programs, employees' responsibilities, and codes of conduct and governance.

Spring, 1.5 credits, Letter graded (A, A-, B+, etc.)

TMP 551: Data Analysis for Technology Managers
The use and limitations of mathematical and statistical techniques, especially for the use of data in choosing between alternative strategies for companies. Probability, estimation, hypothesis testing, analysis of variance, and regression analysis are among the topics covered. Summer
1.5 credits, Letter graded (A, A-, B+, etc.)

TMP 552: Management Science for Technology Managers
An introduction to the use of modeling in management, particularly in high technology contexts. Basic concepts of management science are covered and a variety of models are examined for application in quantitative decision making. Summer
1.5 credits, Letter graded (A, A-, B+, etc.)

TMP 555: Technology, Government and Business
Examines the role of government as a regulator of technological business activity, a customer for technological products and services, a source of funding for technological development, and a facilitator of technological innovation. Special topics include technology assessment, technology transfer, and frameworks for national and regional technology policy.

Summer, 1.5 credits, Letter graded (A, A-, B+, etc.)

TMP 573: Basic Marketing Principles and the Information Economy
Introduction to the basic principles of marketing, including: the influence of the marketplace and the marketing environment on marketing decision making; the determination...
of a firm's products—prices, channels, and communication strategies; and the firm's system for planning and controlling its marketing effort. Special emphasis will be given to marketing in information industries and knowledge-intensive industries.

Prerequisites: TMP 552
Summer, 1.5 credits, Letter graded (A, A-, B+, etc.)

TMP 574: Marketing of Technology Based Products
Adaptation and extension of basic marketing concepts for technological products. Topics include: understanding unarticulated user needs, demand forecasting and strategic planning in technology markets, product design and architecture, product platform strategy, managing new product realization programs, and managing the technology adoption lifecycle. Summer
1.5 credits, Letter graded (A, A-, B+, etc.)

TMP 575: Introduction to Management Information Systems
The analysis and design of information systems to aid in managerial decision making and the effective operation of corporations. Pertinent computing, telecommunication and systems technologies will be surveyed. Summer
1.5 credits, Letter graded (A, A-, B+, etc.)

TMP 576: Management Information Systems for Accounting, Budgeting and Human Resources Management
Examination of recent MIS options for specialized functions in an organization, such as accounting, budgeting and human resources. Includes review and assessment of integrated multi-function software suites for organizational management, and comparison of packaged software systems versus web-based subscription software services. Summer
1.5 credits, Letter graded (A, A-, B+, etc.)

TMP 577: Competitiveness Project (A): Models and Concepts
First part of course-pair TMP577 & TMP578. Students choose a project that focuses on technology management issues in their own industry or organization and apply tools learnt in other courses to analyze the issues. Part A of this pair of courses concentrates on problem formulation and the planning of research and analysis. This course is intended to commence mid-way through the program and be taken concurrently with the next several courses in the program.
Prerequisites: TMP 552

Summer, 1.5 credits, Letter graded (A, A-, B+, etc.)

TMP 578: Competitiveness Project (B): Quantitative Methods
Second part of course-pair TMP577 & TMP578. Students take the issues formulated during Part A of this pair of courses and proceed to implement the research plan also developed in that course. Part B of this pair of courses involves detailed data collection, analysis, and reporting of results. This course is intended to commence three-quarters of the way through the program and to be taken concurrently with the next several courses. Submission of the project report and a formal presentation of results are required near the end of the program. Summer
1.5 credits, Letter graded (A, A-, B+, etc.)

TMP 585: Operations Management for Technology Organizations
Introduction to the analysis and measurement of processes for creating and delivering goods and services. Covers trade-offs in operations management decisions, product and process planning, layout and location strategy, production scheduling, inventory control, quality management, computer integrated manufacturing, and cost justification, especially in the adoption of new technologies. Summer
1.5 credits, Letter graded (A, A-, B+, etc.)

TMP 586: Human Resources Management for High Technology Environments
Survey of issues in personnel recruitment, employee selection and classification, workforce evaluation, wages, benefits, regulations, unionization, training, quality management, and employee performance in high technology settings. Summer
1.5 credits, Letter graded (A, A-, B+, etc.)

TMP 590: Technology Management and Emerging Industries
First part of course-pair TMP590 & TMP592. Introduction to salient issues facing managers of enterprises involved in the development and implementation of new technologies. Use will be made of case histories and presentations by technological managers and innovators, wherever possible. Part A of this pair of courses will concentrate on the relationship between technological innovation and emerging industries. Summer
1.5 credits, Letter graded (A, A-, B+, etc.)

TMP 592: Role of Technology Standards
Second part of course-pair TMP591 & TMP592. Introduction to salient issues facing managers of enterprises involved in the development and implementation of new technologies. Use will be made of case histories and presentations by technological managers and innovators, wherever possible. Part B of this pair of courses will concentrate on the role of technical standards in the dynamics of competition between firms in high technology industries. Summer
1.5 credits, Letter graded (A, A-, B+, etc.)

TMP 593: Developing Technology Management Solutions (A)
First part of course-pair TMP593 & TMP595. Special course customized each year to address current trends and solutions to management problems in technological enterprises. Examples would include trends in electronic commerce, new approaches to product development strategy for technology, information security and privacy, or trends in the biotechnology industry. The course will involve field to companies and guest lectures by executives from technology companies wherever possible. Summer
1.5 credits, Letter graded (A, A-, B+, etc.)

TMP 594: Financial Management
Business concepts, practices and procedures to analyze financial flows, especially in high technology settings. Topics covered include the basic mathematics of finance, capital budgeting, capital structure, dividend policy, mergers, and working capital management. Prerequisites: TMP 552, TMP 546
Summer, 1.5 credits, Letter graded (A, A-, B+, etc.)

TMP 595: Developing Technology Management Solutions (B)
Second part of course-pair TMP593 & TMP595. Special course customized each year to address current trends and solutions to management problems in technological enterprises. Examples would include trends in electronic commerce, new approaches to product development strategy for technology, information security and privacy, or trends in the biotechnology industry. The course will involve field to companies and guest lectures by executives from technology companies wherever possible. Summer
1.5 credits, Letter graded (A, A-, B+, etc.)

TMP 596: Financial Markets and Venture Finance
Covers the variety of means by which corporations, especially high technology
firms, may be financed. Topics include capital markets, investment principles, venture finance, and a continuation of the mathematics of finance covered by TMP 594.

**Prerequisite:** TMP 594

*Summer, 1.5 credits, Letter graded (A, A-, B+, etc.)*

**TNT 597: Technology Management and Strategy**

First part of a course-triad TMPS97, TMPS98 & TMPS78. Concepts and techniques of strategic management are examined and applied to relevant cases involving technology management. The class synthesizes all elements of the program and examines how an organization can plan and develop initiatives, evaluate their effectiveness, and manage the change process. Part A emphasizes corporate strategy.

*Summer, 1.5 credits, Letter graded (A, A-, B+, etc.)*

**TNT 598: Technology and Entrepreneurship**

Second part of a course-triad TMP597, TMP598 & TMPS78. Concepts and techniques of strategic management are examined and applied to relevant cases involving technology management. The class synthesizes all elements of the program and examines how an organization can plan and develop initiatives, evaluate their effectiveness, and manage the change process. Part B emphasizes entrepreneurial strategy.

*Summer, 1.5 credits, Letter graded (A, A-, B+, etc.)*

**TNT 599: Intellectual Property Strategy**

Third part of a course-triad TMP597, TMP598 & TMPS78. Concepts and techniques of intellectual property strategy are examined and applied to relevant cases involving technology management. The class synthesizes all elements of the program and examines how an organization can plan and develop initiatives, evaluate their effectiveness, and manage the change process.

*1.5 credits, Letter graded (A, A-, B+, etc.)*

**TNT 504: INTL MGT**

**TNT 505: HITEC VENTURE**

**TNT 506: BASIC MGT**

**TNT 515: APPL PROB & STATS**

**WNS**

**Women's Studies: Social Sciences**

**WNS 559: Psychology of Women's Health**

This course covers a variety of psychologically-important topics in women's health based on current research findings. We address psychological contributors to and consequences of women's health and illness, focusing on diseases that affect women differently or disproportionately than men (including coronary heart disease, cancer, AIDS, and autoimmune diseases), women's reproductive health (including menstruation, contraception, pregnancy, infertility, and menopause), health behaviors (including substance abuse, exercise, and eating), and other topics such as violence against women, women's mental health, and women as health care providers and health researchers.

*Co-scheduled with WST 559. Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)*

**WRT 612: Theories in Composition**

This course explores the relationship between reading and writing skills, the differences between speech production and writing production, and the relationship between literacy, culture, and language politics.

*Spring, 3 credits, Letter graded (A, A-, B+, etc.)*

**WRT 613: Research in Composition**

This course provides an introduction to the nature of empirical research in Composition Studies. Students will survey landmark research studies, learn how to read research reports critically, and conduct a mini-research project in their own classrooms or tutoring situations to analyze underlying causes of students' writing problems.

*Spring, 3 credits, Letter graded (A, A-, B+, etc.)*

**WRT 614: Topics in Composition and Writing**

This course will consist of directed readings in particular areas of interest in rhetoric, the history of rhetoric and pedagogy, and teaching strategies for teachers.

*Offered Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)*

**WRT 690: Directed Readings**

*May be repeated for credit.*

**WRT 698: Practicum in Teaching Writing**

Students take the seminar in conjunction with teaching a section of WRT 101. This course provides hands-on experience and instruction in the basics of writing pedagogy, including...
WST

Women's Studies

WST 510: Gender and Culture
A variable topics course on the many ways in which culture and gender interact. Possible topics include women in multiethnic America, women in the labor movement, and women and social policy.
Prerequisite: Permission of instructor
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

WST 511: Gender and Culture
A variable topics course on the many ways in which culture and gender interact. Possible topics include women in multiethnic America, women in the labor movement, and women and social policy.
Prerequisite: Permission of instructor
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

WST 512: Gender and Culture
A variable topics course on the many ways in which culture and gender interact. Possible topics include women in multiethnic America, women in the labor movement, and women and social policy.
Prerequisite: Permission of instructor
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

WST 550: Women of Color in The Modern World; Shifting Identities and Feminist Visions
This course explores the various ways in which gender, race, and class, along with other aspects of identity, shape the lives and experiences of women of color in the United States and globally. It presents the ongoing debates concerning the interconnections of gender, race and shifting identities. It will examine the relationships between the construction of personal identities, identity statuses, cultural and ideological meaning systems, and the search for alternative images. Permission from advisor required.
3 credits, Letter graded (A, A-, B+, etc.)

WST 559: Gender and Health
This course explores gender differences in physical and mental health through the study of psychology, sociology, medicine, and epidemiology.
Co-scheduled with PSY 559.
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

WST 595: Reading Colloquium in Women's History
A topics course dealing with such subjects as women in social movements, the place of gender in particular historical circumstances, imperialism and woman, changing views of sexuality, or relations between family policies and other political programs. This course offered as both HIS 595 and WST 595.
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

WST 599: Directed Readings in Women's Studies
Students study any subject not ordinarily covered by a course offering if the reading course is supervised by a member of the Affiliates Network and approved by the director of the Graduate Certificate Program in Women's Studies. May be repeated as topic varies, but only three credits count toward the certificate.
Prerequisite: Permission of instructor
Fall or Spring, 1-3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

WST 600: History and Methods of Women's Studies
A study of the emergence of modern Western feminism provides the context for an analysis of the formation of Women's Studies as an area of pedagogy and research. The course investigates the concepts and methods appropriate to interdisciplinary research on women and gender, and how these approaches define Women's Studies as a new area of knowledge. The effects of this interdisciplinary research on assumptions and methods in the traditional disciplines will be analyzed.
3 credits, Letter graded (A, A-, B+, etc.)

WST 601: Feminist Theory
This course covers critical works of feminist theory in the humanities. Readings focus on significant works that deal either with the theory and practice of feminism or with feminist methods of scholarship.
Prerequisite: Admission to the Graduate Certificate Program in Women's Studies
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

WST 602: Social Perspectives on Feminist Theory
This course introduces students to the main currents of feminist social, political, and intellectual theory. It will explore theories and texts and the linkages between developing feminism and such fields as economics, sociology, history, and philosophy.
Prerequisite: Admission to the Graduate Certificate Program in Women's Studies
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

WST 610: Advanced Topics in Women's Studies
A variable topics seminar course in women's studies for the advanced student. Topics might include feminist peace politics, women in Third World cinema, feminist theology, or feminist philosophy. Course may be repeated as topic varies.
Sections of this course are co-scheduled with SOC 509, PHI 615, and PHI 616.
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

WST 611: Advanced Topics in Women's Studies
A variable topics seminar course in women's studies for the advanced student. Topics might include feminist peace politics, women in Third World cinema, feminist theology, or feminist philosophy. Course may be repeated as topic varies.
Sections of this course are co-scheduled with SOC 509, PHI 615, and PHI 616.
Fall or Spring, 3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

WST 690: Advanced Readings in Women's Studies
Advanced students read on any subject not normally covered by a course offering with any member of the Women's Studies Faculty Affiliates Network. Permission of the instructor and of the director of the Graduate Certificate Program in Women's Studies required.
Fall or Spring, 1-3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.
WST 699: Practicum in Women's Studies

An interdisciplinary colloquium. The syllabus developed in this course will be evaluated by the instructor who will normally be the director of Women's Studies. Prerequisite: A graduate feminist theory course.

Co-requisite: Completion of the requirements for the Graduate Certificate in Women's Studies.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)
